By the above it is not meant to convey the impression that it is impossible to ascertain the physical facts regarding underground water. This is not the case, for it is possible in each case to secure data sufficiently accurate for the purpose in mind. However, such data to be of value must be the result of a painstaking and intensive investigation, which often must extend over more than one season. The Division of Water Rights and its predecessor, the State Water Commission, have directed or assisted in several such investigations, all of which have been successful in obtaining the desired data. One of these investigations was carried on by the Commission for three years at an expense of \$30,000, and included probably the most complete study ever made of an underground water situation. It was possible at the conclusion of this study to closely balance the replenishment against the draft, the basin being of the closed type, and to evolve the relation between the amount of water flowing in the stream and the percolation therefrom. The work resulted in an agreement whereby it was possible to proceed with the construction of a large reservoir on the headwaters of the stream.

Summarizing the above statements, the law of underground waters is in conformity with the needs of the state, allowing full development.

Administration and direction, however, are lacking. The physical facts can be determined by proper investigation.

"Spreading" of Storm Waters.

The topography and climatic conditions in the southern portion of the state have resulted in the development of a method of conservation of water in that section which is relatively new in the art of irrigation. Surface storage of flood waters has been known and practised the world over for a long time. Underground storage of these waters and their recovery by pumping or by gravity, at the lower end of a subterranean basin, was brought about by demand for water and the lack of feasible surface reservoir sites.

The slopes of the stream channels are steep, making available surface storage very expensive. The run-off is flashy, the variation between normal summer flow and mean annual flow being exceedingly large, and the variation between wet and dry years such that excessive reservoir capacity is needed to furnish hold-over storage, when anything like the entire run-off of the stream over a long period of years is to be conserved.

The lack of available surface storage sites has been compensated for in a measure by the deposition in the stream beds themselves of alluvial material, and the formation at the mouth of the streams of debris cones. Flood water is readily absorbed in these cones under natural conditions. Much of the low flow of the streams in the summer time is maintained by the gradual draining out of the alluvial deposits saturated by the flood flow of the preceding winter.

The spreading of flood waters developed because the draft from various basins had become larger than the natural replenishment. As the name implies, the flood waters are spread by artificial means over a larger surface of porous ground than the stream would naturally occupy. The results obtained have been gratifying.

The most notable example of such spreading is that of the Water Conservation Association on the upper Santa Ana River. The association, composed of the various water and ditch companies diverting water from the Santa Ana River, assisted by the counties interested, has been very active in spreading and sinking the flood flows of the river on the upper debris cone of the river near Redlands. Accurate records of the amounts spread each year have been kept since 1912, and show the maximum to have been 82,000 acre-feet in 1922, and the minimum to have been 3000 acre-feet in 1913. A comparison of well levels in the San Bernardino Valley covering the period 1911-1921 proves conclusively that the spreading has resulted in raising the average well levels in the valley from ten to twenty feet. The cost of such spreading is said to be about fifteen cents per acre foot. The operation has proved so successful that the Association has lately applied to the Division of Water Rights to appropriate 150 cubic feet per second in addition to the original filing for 240 cubic feet per second, making a total of 390 cubic feet per second, or 19,500 southern California miner's inches, to be diverted.

A number of other applications have been received by the Division for the appropriation of water for spreading purposes. The applicants desire to spread storm waters and thereby raise or maintain the

ground water levels in many southern California basins. Among these are the San Jacinto, Perris, Coachella, San Bernardino, Antelope, San Fernando and smaller valleys. In some cases these applications have been actuated by proposed surface storage developments upon the streams applied for as sources.

The difficulties arising in connection with these applications lie in establishing the fact of beneficial use of the water appropriated. In a surface diversion, even including storage, the water impounded or diverted from the stream may be measured and seen. Its course to the place of use can be followed and the water used measured and identified as that diverted or stored. Establishing the fact of beneficial use is a simple matter of observation and measurement.

With an appropriation for underground storage, it is difficult in some cases to determine even the amount stored, unless there is an actual taking of the water out of the stream through ditches. Some spreading comprises merely the placing of obstructions and check dams in the stream channel to retard the flow, and it is difficult to measure the increased percolation caused by artificial methods over that naturally occurring.

Once the water is placed underground, it becomes impossible to trace its movements without intensive investigation. The question arises as to whether the water is used by those in whose interest the application was made, by other users in the same or a distant locality, or whether it passes on beyond the wells and pumps and is evaporated or is lost in the ocean.

The controversies which arise as a result of this uncertainty occur where it is desired to make an appropriation for diversion or storage upstream from the proposed spreading diversion. Spreading *per se* can not be considered an appropriation any more than surface storage, unless the water so spread or stored is beneficially used. Unless this use can be shown, the applicant for spreading can not claim a basis of right upon which to receive a license, or to object to upstream diversion or storage. The solution of the problem would be a statute defining what constitutes beneficial use by spreading.

Overdraft from Basins.

Another question is that of the over-appropriation, or overdraft, of subterranean basins. The principles laid down in various cases by the Supreme Court of correlative rights as between overlying landowners, and of the superior right of the overlying owner as against the exporter to distant lands, are just and equitable as long as there is no overdraft upon the basin. When, however, the development of ground water has reached and exceeded the safe yield of the basin, and the water levels are persistently falling from year to year, regardless of climatic conditions, additional pumping even for use upon lands overlying the basin should be restricted unless the replenishment can be increased by artificial methods, for it means a gradually increasing pumping lift for all pumps, which may eventually prove prohibitive, and the ultimate reduction of the water available to each irrigator to a quantity less than the amount sufficient to sustain plant growth.

The condition of overdraft exists or is being approached in some sections of the state at the present time, and if the rapid rate of develop-

ment occurring during the last few years is maintained in the future, without artificial replenishment, serious results will ensue.

Underground Water Legislation.

Generally speaking, the need of legislation relative to ground water is to put into practical effect the rules already laid down by the courts. The Division of Water Rights has administrative jurisdiction over surface water, and partially so over sub-surface water. However, the surface and ground water supplies are so intimately related physically that one can not be satisfactorily administered without consideration of the other. The water does not change with its disappearance underground and subsequent recovery, and the two classes of water rights, surface and underground, when on a single source should not be differentiated either physically or legally, as they apply to the same water. The recent spreading applications connect surface flow and underflow directly, as the water is taken from the one and delivered to the other, to be later recovered and beneficially used.

Mr. Francis Cuttle of Riverside, president of the Conservation Association whose spreading operations on the Santa Ana River have been noted, says in a letter on this subject:

“The only suggestion I have is that the law should be amended so as to give the State Water Commission jurisdiction over underground waters. I have in mind the tremendous expense and long drawn out litigation that has been gone through between the city of San Bernardino, the city of Riverside, and the Riverside Water Company, covering nearly a year of actual trial at court, involving the expenditure of over \$100,000 to the parties to this litigation, and it is not likely that much will be accomplished when all of this expense and trouble has been incurred.”

Recommendations.

The Division of Water Rights recommends that legislation be adopted covering the following points in connection with underground water:

Defining beneficial use in connection with spreading and underground storage, and amending the present technical requirements of applications to allow this type of filing to be readily handled.

Authorizing the ascertainment of physical facts relative to the water supply of underground basins where overdraft exists or threatens, and the withholding of further permits for diversions from such basins when in the judgment of the Division the beneficial draft exceeds the water crop.

Requiring that application be made to the Division for the appropriation of underground water whenever the same is to be used on other than overlying lands.

CHAPTER XI.

FINANCIAL STATEMENT.

The following table shows the income and expenditures of the Division of Water Rights since July 29, 1921, the date on which the act organizing the State Department of Public Works became effective.

TABLE 7.
FINANCIAL STATEMENT.
STATE DEPARTMENT OF PUBLIC WORKS.
DIVISION OF WATER RIGHTS.

Statement of Income and Expenditures for the period July 29, 1921, to June 30, 1922.

INCOME.

San Joaquin Hydrography Investigation Fund	-----	2,407	01
			4,409 38
Total expenditures	-----		\$96,531 02
Fees collected and credited to General State Fund	-----		\$16,958 41

The income statement is segregated by funds, and those under the heading "Contributive Funds" were not supplied by state appropriation, but by outside interests. The expenditures are similarly divided into "Appropriations" and "Contributive Funds," and the first item is segregated by functional activities.

To complete the record since the submission of the last biennial report of the State Water Commission, there has been prepared also a financial statement covering the period July 1, 1920, to July 29, 1921. This statement will be found in Appendix VI, on page 114.

Fees.

Fees in the amount of \$16,958.41 were collected in the period July 29, 1921, to June 30, 1922, and have been transmitted to the State Controller and deposited in the state treasury to the credit of the general fund of the state, in accordance with the requirements of the act creating the office. The fees include those received for filing applications, in connection with the issuance of permits, and miscellaneous charges, such as for copying and certifying records, the main portion, however, coming from the permit fees, which are collected on a sliding

scale basis as set forth in the act. The amounts of such fees received during the last five years by the Division and its predecessor, the State Water Commission, have been as follows:

1917-1918 -----	\$4,157 73
1918-1919 -----	3,999 55
1919-1920 -----	6,769 76
1920-1921 -----	16,660 70
July 29, 1921 to June 30, 1922 -----	16,958 41

A very large increase of fees received is noted during the last two years. This has been due to increased activity of the office in issuing a greater number of permits, and also permits for larger projects. The Division of Water Rights has, since July 29, 1921, collected and remitted to the Controller approximately 18 per cent of the amount of money expended during the same time from state appropriations.

APPENDIX I.

SALINITY INVESTIGATIONS IN THE SACRAMENTO AND SAN JOAQUIN DELTA.

The salinity of the waters of lower Sacramento and San Joaquin rivers during the season of low flow is a serious problem confronting the owners of three hundred thousand acres of rich agricultural land. Several cities and towns are also concerned.

Sacramento and San Joaquin rivers discharge annually an average of approximately 33,000,000 acre-feet and this enormous volume of fresh water formerly swept the salt water out of the delta of these two rivers during the periods of high flow and acted as a barrier in keeping it out. But of late years the irrigation draft has become so great in the summer and fall that the river water in the lower delta becomes at times highly impregnated with salt and unfit for agricultural or domestic use.

The State Water Commission (predecessor of the Division of Water Rights) recognized the seriousness of this problem of increasing salinity in 1916. The First Biennial Report (p. 88) noted the probability that increased diversion from the summer flow of the Sacramento and San Joaquin rivers might cause a correspondingly increased encroachment of salinity into the delta. The Commission took some water samples from the rivers in this area and from Suisun Bay during October, 1916, and again in September, 1919, but no results of importance were obtained.

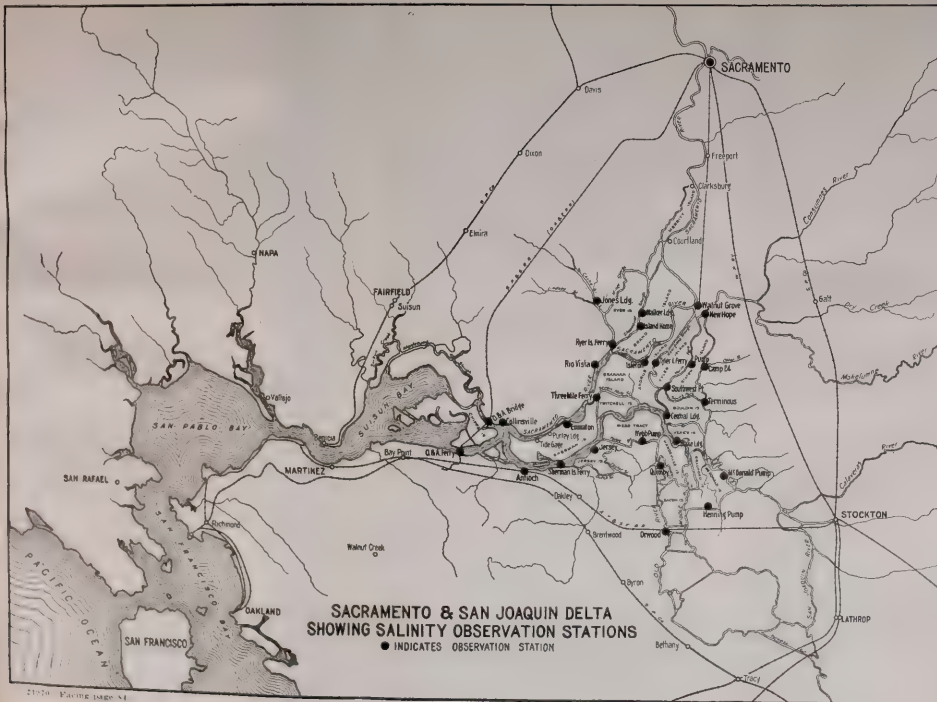

The light rain and snow fall of the winter of 1919-1920, and the large rice acreage planted in the Sacramento Valley indicated that the salinity condition would in that season become worse than ever before known. At the request of the River Lands Association, and with funds furnished by this organization, the Water Commission undertook a far more comprehensive plan of investigation. A description of the work carried on during this season is contained in the "Third Biennial Report of the State Water Commission" and need not be repeated here. The graphical analyses of water samples taken during the season is reproduced herein, however, in essentially the same form for the purpose of comparing salinity conditions of the year 1920 with those of the succeeding two years.

Investigation Work in 1921 and 1922.

The work begun in 1920 has been carried on in much the same manner during the periods of low river flow in the summer and fall of 1921 and 1922.

Because of the decreased area affected during the past two seasons it has been unnecessary to maintain so many observation stations as in 1920. The number and location of stations at which samples were taken, as well as the period under observation, is shown for each of the various years in the accompanying tabulation and map. (See Plate 10.)

The observers were instructed to take the samples on alternate days during daylight hours about two hours after the tidal peak, and in moving water unaffected by local influences, then to mail the samples promptly to the office of the Division.

Observation season not yet closed on October 15th.

The object in taking the samples approximately two hours after the tidal peaks was to secure data for both maximum and minimum salinity conditions. As pointed out in the Third Biennial Report (p. 92) there is a lag of some two hours after high tide before maximum salinity is reached and a corresponding lag after low tide before minimum salinity is reached. This lag is doubtless to be explained by the fact that the reversal in tidal current does not come at the peak of the tide, but from one and one-half to two and one-half hours later. This will be understood if one stops to consider that the tidal peaks are some six hours later at Sacramento than at Collinsville and therefore after high tide is reached at Collinsville, and the water level begins to fall at that point, there must continue for a time a tidal current toward Sacramento until an equilibrium is established with up-river points. The reverse is, of course, true at low tide.

The samples received have been tested for chlorine in the office of the Division by titration with silver nitrate, the parts of chlorine being expressed in parts per 100,000. To obtain parts of salt the results are multiplied by 1.65.

Graphical Analyses of Results Obtained.

Besides the accompanying map (Plate No. 10) there are contained herein three plates illustrating graphically the salinity conditions as they have been observed in the delta by the office of the Division during the past four years. Plate No. 11 has been designed to illustrate the relation between salinity in the delta and the flow in the Sacramento and San Joaquin rivers. Plates No. 12a and No. 12b have been designed to better illustrate the comparative advance and retreat of salinity in the delta at similar dates in different years. It is quite clear from the graphs that Sacramento River has an important influence upon salinity conditions at points on San Joaquin River below Georgiana Slough, and that San Joaquin River has little or no effect upon salinity at points on Sacramento River.

There is unanimous agreement among students of the problem that if sufficient discharge be maintained in the Sacramento and San Joaquin Rivers the salt water can be kept back and the menace of increasing salinity removed from the delta. There is as yet, however, no agreement as to what would be sufficient discharge to accomplish this purpose. There are as yet insufficient data upon which to safely base a close estimate of minimum flow.

One of the principal obstacles to basing such an estimate upon the results of investigations already made is the difficulty in establishing closely the river discharge at Sacramento because of the tidal influence there. At low stages of the river the tide alone may cause a variation of as much as three feet in the water level, thereby making it exceedingly difficult to establish a satisfactory gaging station.

To establish the approximate flow of Sacramento River at Sacramento in the years 1919, 1920, and 1921, data obtained at or near that point by the State Engineer's office have been used. For the year 1922, no records of flow at Sacramento were obtainable and the flow has therefore been established approximately by taking the sum of the combined discharges of Sacramento River at Knights Landing, Feather

River at Nicolaus, and American River at Fair Oaks, where gaging stations were maintained by the United States Geological Survey.

While it is appreciated that there is a considerable diversion by pumping for irrigation between these stations and the city of Sacramento, there is also no doubt a very considerable return flow. The records obtained in 1921 by the State Engineer's office for this set of three stations overlaps for a period of 106 days the record maintained by the same office at Sacramento, and there is noted a 7 per cent increase between the upper and lower sets of stations. There are no available data on return flow in this section of the river but the data given in Appendix III is interesting in this connection.

There are considerable variations in daily river discharge and there are also considerable variations in salinity conditions as revealed by the samples taken, so that the graphs of Plate No. 11 must be considered as representing average conditions of maximum daily salinity rather than exact conditions for particular days.

The data obtained in 1919 were meager and the results obtained unsatisfactory.

Conclusions.

The difficulty in exactly determining the flow of water into the delta, the rapidity with which the rate of flow changes, and the very apparent lag in time between the date on which the flow arrives at a critical stage and the date when the effect of that critical stage becomes apparent in samples taken, makes impossible at this time any exact determination of the amount of flow required to keep the water to any specific degree of freshness in the delta.

It would appear that there will probably be no apparent increase in salinity as a result of the continuation of low flow for a brief period, but that the same flow continued for a longer period may bring about a marked increase in salinity conditions.

It appears clear that with a combined discharge of less than 15,000 second-feet in the two rivers there very soon begins an increase in the saline content of the water at Oakland-Antioch ferry, and that in years of extreme low summer flow the salinity at this point may become as high as 900 parts chlorine in 100,000.

It appears probable that soon after the combined flow of Sacramento and San Joaquin rivers falls to 7500 second-feet it may be expected there will begin an increase in the salinity at Antioch, and that this increase may in a season of minimum flow reach a maximum of at least 735 parts chlorine in 100,000. In years more nearly approaching normal a minimum combined discharge from the two rivers approximating 4000 second-feet will probably prevent the salinity increasing beyond 250 parts chlorine per 100,000 at Antioch.

At Jersey on Jersey Island it appears the salinity increase becomes marked soon after the combined river discharge falls to 4000 second-feet and may reach a condition of 325 parts chlorine in 100,000 in years of extreme low flow. In years more nearly approaching normal when the combined river discharge falls little below 4000 second-feet it is probable the salinity at this point will not exceed 35 parts chlorine.

At Central Landing on Bouldin Island it does not appear that there is any marked increase in salinity until shortly after the combined

NOTE: SALINITY CURVES INDICATE MAXIMUM SALINITY DURING DAYLIGHT HOURS.

SAN JOAQUIN RIVER POINTS

SAN JOAQUIN RIVER POINTS

discharge of the two rivers falls below 1500 to 2000 second-feet. It will reach a maximum of at least 75 parts chlorine in 100,000 in years of extreme low flow, but during years in which the minimum combined flow of the two rivers remains above 4000 second-feet will probably remain below 10 parts chlorine.

Sacramento River at Emmaton begins a very rapid increase in salinity soon after the flow at Sacramento reaches the 2000 second-foot stage. It may reach a maximum of 475 parts chlorine in years of extreme low flow. When the flow of Sacramento River at Sacramento is maintained above 3000 second-feet the salinity at Emmaton appears to remain below 50 parts chlorine.

Rio Vista appears to suffer no marked increase in salinity until after the Sacramento River at Sacramento falls to the 1000 second-foot stage and will reach a maximum of at least 235 parts chlorine in years of extreme low flow. During years when the flow is maintained above the 3000 foot stage there will probably not be in excess of 4 parts chlorine at Rio Vista.

A decrease in the winter and spring flood run-off by storage, an increase or decrease in the amount of return flow caused by up-river diversions for irrigation, or the deepening of the river channels by dredging for the benefit of navigation may bring about important changes in the salinity problem confronting the delta region.

Some 300,000 acres of the richest agricultural land in the state depend upon the river flow through the delta for an irrigation supply diverted at points where the water becomes impregnated during the season of low flow with the salt of ocean water. In 1920 this entire area drew from a supply containing in excess of 30 parts chlorine (50 parts salt) per 100,000.

This menace may be met, as has been heretofore proposed, either by the construction at a point below the delta of some collapsible dam to hold back the salt water at times of low river flow, or it may be met by regulation of the river flow to some safe minimum through the operation of storage reservoirs in the mountains. The correct solution is only to be found by an extended study of a multiplicity of diverse factors.

APPENDIX II.

INVESTIGATION IN CONNECTION WITH PERMITS IN SACRAMENTO VALLEY FLOOR.

Irrigation Development and Relation to Division of Water Rights.

Within the last ten years the development of irrigation in the Sacramento Valley has advanced with remarkable rapidity. The causes of this advance are numerous. In former years the raising of grain with no irrigation was found to give ample return upon the investment. Later, with the increase in land values and the "wearing out" of the soil from year after year of grain farming, the necessity for products yielding greater returns became apparent. Such a change demanded the development of irrigation. As a whole the Sacramento Valley, from considerations of its topography, soil, climate and water supply, was admirably adapted for such development. The land was such that the cost of preparation, leveling, construction of canals, etc., could be reduced to a minimum. There was practically no clearing to be done. Although conditions were such that a gravity supply of water could not be economically secured, it was found that the development by pumping from the Sacramento River with comparatively low lifts was entirely feasible and compared very favorably with the cost of gravity supply elsewhere.

As one of the greatest causes in the growth of irrigation in the valley, the development of the rice industry must be prominently mentioned. The growing of rice in the Sacramento Valley began to assume an important place in about the year 1916. In the upper portions of the valley there were some lands which had been thought unfit for any crop, but which proved to be very well adapted for the growth of rice. With a very decided increase in the price received for rice from 1915 to 1919, the acreage of this crop was increased to a remarkable extent.

As practically all of the irrigation development in the valley has been brought about within recent years, the acquirement of the necessary water rights by the majority of the various projects diverting water has been through application to the Division of Water Rights under the terms of the Water Commission Act. Such applications for appropriation of water from the Sacramento River commenced to be filed about 1915 and the number received each year increased very rapidly up to 1920. The extent of the applications upon which permits have been issued, as to number and area covered, is shown on the accompanying map, Plate 13, page 100. On this map the total valley agricultural area north of Sacramento has been given as the outer boundary, the area of the projects under permit is shaded and the application numbers, indicative of the relative priorities, are shown opposite the respective points of diversion from the river. In the accompanying Table 16, all permits granted to October 15, 1922, within the valley area have been listed.

The valley agricultural area north of Sacramento, as shown on the map, totals about 2,070,000 acres, and the total acreage under permit, 369,947 acres, amounts to about 18 per cent of that area.

In addition to the applications upon which permits have been issued, as given in Table 16, there have been received forty-four applications

within the valley upon which action has not yet been taken. Included in this group there are two applications covering the Iron Canyon Storage Project calling for 3170 second-feet for 284,363 acres. Omitting these two applications, those remaining, upon which action is pending, have applied for a total of 2753.9 second-feet for a total area of 225,729 acres.

In Table 8 a segregation as to source has been made of both applications upon which permits have been issued, and those upon which action is pending. In the tabulation of the latter, those of the Iron Canyon Project have been omitted.

TABLE 8.

Segregation of Pending and Permitted Applications in the Sacramento Valley as to Source.

Source	Applications upon which permits have been issued			*Applications upon which action is pending		
	No.	Amount, second-feet	Acreage	No.	Amount, second-feet	Acreage
Sacramento River.....	75	25,148.36	317,556.91	21	2,146.82	191,633
Trough of Colusa Basin.....	19	2179.33	20,609.70	2	181.00	7,490
Feather River.....	3	750.00	41,116.20	7	218.35	14,205
American River.....				1	10.00	267
Small tributaries, sloughs and drains.....	15	180.13	12,276.00	11	197.73	12,134
Totals.....	97	6,137.04	369,947.01	42	2,753.90	225,729

*This tabulation omits two applications covering the Iron Canyon Project and amounting to 3,170 second-feet for 284 363 acres.

¹Five permits include both Sacramento River and Trough of Colusa Basin as source.

²120.78 second-feet issued for either Sacramento River or Trough of Colusa Basin as source.

³21,611.8 acres covered by permits from both Sacramento River and other sources, Trough of Colusa Basin and Sycamore Slough.

Field Work.

In conformity with the terms of the Water Commission Act, requiring that a field inspection be made of each project under permit at the expiration of the date set for completion of same, there were, at the beginning of the 1921 season, about seventy permits in the Sacramento Valley requiring inspection. Prior to 1921 the total number of inspections that had been made was thirteen. These were made during the 1919 season. Although there had been no inspections other than these prior to 1921 there was carried on in the Valley during the 1920 season a large amount of work by the engineers of the Emergency Water Conference, the results of which have been made available to this Division and have proved of great value in connection with a study of the use of water for rice as later outlined. The work of the Emergency Water Conference and reasons for its formation have been described in the Third Biennial Report of the State Water Commission. With the beginning of 1920 a great extension in acreage to be irrigated was planned. This was a result of very favorable prices received for farm produce in 1919. Coupled with the extension in acreage were the indications that the 1920 season would be one of the driest years in the history of the Sacramento River. The seriousness of the situation increased as the season advanced, resulting in the formation of the Emergency Water Conservation Conference, consisting of representatives of the State Water Commission, the Railroad Commission, the State Engineer, and various other state and federal offices, to carry out

under agreement between the water users on the Sacramento River, the regulation of diversions and use of water.

A water master was selected and established headquarters at Colusa with a force of assistants to carry out the details of the work. A great deal of data as to acreages planted and irrigated and amount of diversions was collected. When it became apparent that acreage reductions would be required, these were agreed to upon the water master's recommendation and a maximum crop for the available water supply was matured without serious conflict. Of the work of Emergency Water Conference Engineers, that particularly useful to this office in a study of the use of water for rice consisted in the making of from one to four measurements of discharge during the season at each of twenty-five large pumping plants belonging to members of the Conference. At the time of making each measurement careful observations as to power input and head were also taken, so that each measurement could be used in determining a relation between power input, head and discharge. In addition to these measurements, a full inspection was made of each project from which the actual acreage and crops irrigated were indicated on a map of the project.

In issuing permits for the appropriation of water for rice culture in the earlier years, the rice industry being new and very little data being available as to the amount of water actually needed for rice, the Water Commission adopted, tentatively, the rate of one second-foot to forty acres irrigated. In each permit so granted, however, there was placed a clause stating that the amount of water granted was subject to reduction in the license if investigation so warranted.

In view of the above, it has developed that in the Sacramento Valley work, in addition to the usual permit inspections, considerable time and attention was required to be devoted to investigations looking toward a determination of the proper allowance of water for rice. As above outlined, the work of the Emergency Water Conference contributed a great deal to this investigation in 1920. In 1921 an inspection of seventy Sacramento Valley projects under permit was made. At the time of making these inspections each rice project was given especial attention in the matter of acreages irrigated, amount of diversions, length of season, soil, canal losses, waste, etc. By the 1920 discharge measurements a means was provided whereby with data as to the power consumed at the various pumping plants, a computation of monthly and seasonal diversion at those plants could be made. This was obtained for from two to five years for all projects under permit and for the 1920 season was obtained for every pump on the river from Red Bluff to Sacramento. During the 1922 season an inspection of twenty-two projects under permit was made.

Type of Development.

In general, all of the Sacramento Valley irrigation development is of the same type. As shown by the inspections, the majority of projects are for large acreages, the pumping installations have been for large capacities, and the canal systems are extensive. The pumps installed are nearly all of the horizontal centrifugal type, the majority varying in size from ten inches to about thirty-six. Some few projects have installed exceptionally large pumps or batteries of pumps

with sizes of centrifugal pumps running up to fifty-two inches. The pumps operate under heads varying on an average from about ten to about thirty feet. In the case of two large projects where the head is somewhat less than the average, the screw pump has been developed very successfully. The development of this pump has permitted the installation of single units of enormous capacity. The maximum installation of this nature is that of a one hundred and eight inch screw pump with rated capacity of three hundred and seventy-five cubic feet per second. With the rapid development as experienced in the valley, and especially with the sudden increase in use for rice of large areas hitherto barren, the construction works and use of water have been carried on in large units. Canals have been thrown up hurriedly without lining and by reason of the level topography a maximum area of land has been covered with a minimum of outlay.

Selecting thirty-three projects of those inspected in 1921 as best representing the Sacramento Valley type of irrigation development, the data from them as given in Tables 9 and 10 indicates the status of the use of water. Upon these thirty-three projects a total of forty-five permits has been issued.

TABLE 9.

Proportion of Total Acreage Under Permit, Which Was Irrigated During Year of Maximum Irrigation, on Thirty-three Typical Projects.

Maximum per cent of total acreage of project irrigated in any one year	Number of projects	Total acreage of projects	Total maximum acreage irrigated	Average number of years under permit
90 to 100.....	10	33,258	32,981	3.70
75 to 90.....	5	21,259	18,760	5.00
50 to 75.....	5	45,643	25,960	4.40
25 to 50.....	10	133,126	57,403	3.80
Below 25.....	3	16,976	877	4.00
Total.....	33	250,262	135,981	

TABLE 10.

Use of Water on Thirty-three Typical Projects Under Permit During the Period 1916 to 1921.

Year	Number of permits granted up to beginning of season	Acreage under permits up to beginning of season	Acreage irrigated	Acreage irrigated in per cent of that under permit
1916.....	4	25,815	14,965	58
1917.....	16	91,008	27,105	30
1918.....	29	182,684	61,915	34
1919.....	41	228,940	96,854	42
1920.....	43	233,664	115,202	50
1921.....	45	250,262	61,920	25

Of the thirty-three projects used as a basis for Tables 9 and 10 eighteen are those upon which rice is the chief crop grown. These eighteen projects represent the greater portion of the rice area under permit and have a total acreage of 168,171 acres.

Rice Culture and Water Requirements.

The requirements and use of water in rice culture differ greatly from those for general crops, such as alfalfa, corn, orchard, etc. The

rice is sown generally in the last of April or early part of May and immediately thereafter the fields must receive their initial flooding for germination. For best results the capacity of ditches must be such that heads of water of sufficient size are available to quickly flood the entire area from four to six inches in depth. Subsequent to the initial flooding, and during a period of about forty to fifty days, the fields must be given a sufficient number of flushings, varying from three to six, to keep the soil fairly moist during germination. About thirty days after emergence of the plants above ground the fields are flooded and the water is held continuously thereafter until the crop is matured. The period of submergence varies from about ninety to one hundred and twenty days, depending upon the variety of rice. The total length of season of use of water is, then, from about one hundred and thirty to one hundred and seventy days. Within the last few years it has been found in some localities, in combating water-grass, which is one of the greatest obstacles encountered in the growing of rice, that by holding the fields in submergence for the entire season, including the early period, the rice will grow up through the water, but the water-grass will not. It would appear that this change in the use of the water for the purpose of fighting water-grass, might somewhat change the total seasonal requirements. Just what the change would amount to is yet to be established. With the method of intermittent flushings there are short periods when water is used in large quantities and other periods when no water is used. On the other hand, in holding the water from the beginning, there is a continuous diversion but of smaller amount, after the initial flooding, and evaporation in this early period is less than that later in the season. With ordinary practice the period of the initial flooding and the period of beginning of submergence are the times of greatest need for water. However, under a large project or a number of projects under one canal system, the periods just mentioned are unlikely to occur simultaneously for the various fields and the demand for water at the point of diversion should not, therefore, be made greater than later in the submergence period. In fact, with the heavy evaporation occurring in the latter part of June, in July and in August, when all fields are submerged, it is probable that the peak demand at the point of diversion of the larger projects may occur in these months. This would appear to be substantiated in the accompanying Table 11. Here, by using the data obtained of monthly power consumption at the various pumping plants the monthly demand in per cent of the seasonal demand was easily shown. The figures in the table represent the average of two or three seasons for thirteen rice projects.

TABLE 11.

Monthly Demand for Water at Point of Diversion in Per Cent of Seasonal Demand on Sacramento Valley Rice Projects.

Month	Monthly demand in per cent of seasonal
April.....	2.9
May.....	11.3
June.....	20.4
July.....	22.5
August.....	21.9
September.....	17.0
October.....	4.0
Total.....	100.0

An average was taken of the maximum monthly demands on the same thirteen projects, irrespective of the month in which the maximum occurred, and found to give a figure of 26 per cent.

The growth and history of the rice industry in California are very concisely told in the figures given in the accompanying Table 12. These are the figures for each year, of the rice acreage, production and price received, as obtained from the office of the California Cooperative Crop Reporting Service.

TABLE 12.
Growth of Rice Industry in California.

Year	Acreage of rice harvested			Production for state, 100 lb. sacks	Price received per 100 lbs.
	Sacramento Valley	San Joaquin Valley	Total for state		
1910.....	100	-----	100	1,350	\$1.44
1911.....	150	-----	150	2,700	1.67
1912.....	1,400	-----	1,400	31,500	2.02
1913.....	6,100	-----	6,100	131,800	2.22
1914.....	15,000	-----	15,000	360,000	2.22
1915.....	34,000	-----	34,000	1,020,600	2.00
1916.....	58,000	-----	58,000	1,539,900	1.73
1917.....	80,400	2,600	83,000	2,539,800	3.89
1918.....	107,780	4,220	112,000	3,301,200	4.22
1919.....	148,500	6,500	155,000	4,185,000	5.93
1920.....	154,000	8,000	162,000	3,717,900	2.69
1921.....	132,700	2,300	135,000	3,280,500	2.56
1922.....	138,500	3,500	*142,000		

*Acreage planted.

Average price received during the period 1910 to 1916, inclusive, \$1.90 per 100 lbs.

The price received for rice is, of course, one of the largest factors controlling the acreage planted. This is very clearly illustrated in the table. With the remarkable increase in price received up to and including 1919, the acreage planted increased by great jumps, while subsequent to the slump in price in 1920 the 1921 acreage shows a very decided drop. With high prices such as those of 1918 and 1919, factors such as the cost of irrigation water, the sufficiency of water supply, adaptability of soil, etc., were hardly given proper consideration in the planning of future acreage. As a result, considerable areas of rather pervious land where the use of water was excessive were planted. These lands were excellent for general crops but entirely unsuited to properly grow rice. Over-expansion, due to high prices received, was the 1920 condition just prior to the great slump in price. With a return to a normal price the factor of the cost of water will undoubtedly be effective in confining the rice areas to lands having soils suitable for rice culture, that is, the clays and clay adobes with impervious subsoils which retain the water in the rice checks with a minimum of loss.

As a result of the 1920 and 1921 investigations into the amount of water used by the various rice projects, the computations for fifteen large and representative projects with total acreage (not all planted) under permit of 193,317, or an average of 12,888 acres, show the average seasonal use at the point of diversion varying from 6.12 to 10.31 acre-feet per acre, with an average of about seven acre-feet per acre. For an average length of season of one hundred and sixty days the use of seven acre-feet per acre is equivalent to a continuous diversion throughout the season of one second-foot for every forty-six acres. As

previously outlined, the average maximum monthly diversion appears to be about twenty-five per cent of the seasonal use. On this basis, for the seasonal diversion of seven acre-feet per acre, the maximum monthly diversion would amount to one and eight-tenths acre-feet per acre, or an area of thirty-five acres served per second-foot during that month. On account of the growth of water-grass it has been the rice growers' experience, in general, that a successful crop can not be grown for more than three consecutive years on new land or for more than two consecutive years on land which has been allowed to lie fallow or has been used for general crops subsequent to use for rice. This has led to the necessary practice of allowing certain lands to lie fallow or to be used for general crops each year. On a large project, therefore, the percentage of the total area cropped to rice each year may be as low as fifty per cent, and will probably not exceed eighty per cent. In estimating the requirements of a project at point of diversion, therefore, using the entire acreage as a basis, a figure for seasonal use such as seven acre-feet per acre as given should be decreased. With a maximum acreage of eighty per cent cropped the seasonal use or "duty", applied to the entire project, would become 5.6 acre-feet per acre, or an area served per second-foot of fifty-seven acres. The difference between the maximum amount of water required for the loam soils and minimum amount required by the clays and clay adobes is clearly indicated in the investigations. In a study of the water requirements at the point of diversion for large projects, however, any well defined relation between water requirements and soil types between the two extremes of loams and clay adobes is found to be obscured by such factors as relative size of project, size of canal system, canal losses, etc.

Water Supply—Divisions—Return Water.

In the light of the rapid development of irrigation in the Sacramento Valley as outlined, the question of water supply is naturally one to which serious consideration must be given. Probably the best indication of crucial conditions in this regard was given during the 1920 season when, with a maximum acreage planted, there occurred the lowest recorded flow in the history of the Sacramento River. As computed from the data on power consumption, the total diversions on the river from Red Bluff to Sacramento for the months May to September, inclusive, 1920, amounted to 969,200 acre-feet. This is shown by months in Table 13.

TABLE 13.

Divisions by Sacramento River Pumping Plants Red Bluff to Sacramento for 1920 Season.

Month	Divisions in acre-feet
May.....	126,000
June.....	232,600
July.....	233,600
August.....	204,900
September.....	172,100
Total.....	969,200

Records of the flow of the Sacramento River for the 1920 season at Red Bluff are available from the United States Geological Survey, and at Butte City, Colusa, and Knights Landing from the Division of Engineering and Irrigation, State Department of Public Works. The

station at Knights Landing is located below the point of return to the river of water from the Colusa Drain. This water is practically all "return water" from rice irrigation and represents a considerable percentage of all the water returning to the river from Sacramento Valley irrigation. During the irrigation season, the amount of water other than return water from irrigation, reaching the Sacramento from its tributaries between Red Bluff and Knights Landing, is negligible. Using the data on pumping diversions and the records of flow of the river at the various points, an indication is given in Tables 14 and 15 of the relation which existed between supply and demand in a critical year such as 1920, and shows as well the amount of water returning to the river. In connection with the latter, it should be noted that in the section between Colusa and Knights Landing there is, entering the river through Butte Slough, a considerable amount of return water from lands irrigated from the Feather River and Butte Creek. For the 1920 season there were no available records of the exact amount of this inflow through Butte Slough. To get, therefore, the amount of return water from the Sacramento River draft it was necessary to estimate as closely as possible the Butte Slough return from foreign sources. It is evident that with the available data, the return water results as given cannot be taken as conclusive. They should, however, be indicative of conditions in this respect and are only presented as such. The importance of a knowledge of the amount of return water in the predication of future water supply and the small amount of work done in the past in this connection serves to point out the desirability of further investigations.

TABLE 14.

¹Rating curve prior to June 14 indefinite. Total for June estimated.

²Based upon use of uncertain record for June flow at Knights Landing (see Note 1). This figure may also include some inflow from tributaries, flowing as late as June, which would not have been taken into account.

³Approximate estimate.

NOTE.—Records for the section Red Bluff to Colusa show discharge at Red Bluff 361,000 acre-feet, pumping draft in the section, 92,100 acre-feet, inflow less draft, 268,900 acre-feet, and outflow from section, 284,000 acre-feet. This gives in this section for May a return of 15,100 acre-feet, or 16.4% of the draft.

TABLE 15,

Totals of Discharge, Diversions and Return Water for Period June to September, inclusive, 1920.
on Sacramento River Sections between Red Bluff and Knights Landing.

	Red Bluff to Butte City*	Butte City to Colusa	Colusa to Knights Landing

¹ Return water in per cent of pumping draft.....	6.6	15.0	² 101,600 54.5

¹Particular note should be taken of the fact that the figures given under these heads represent the return for 4 months, June to September, inclusive, and include, therefore, the high return in the latter part of the period of water drained from the rice fields (see return per centage given for September in preceding tabulation).

²Estimate of inflow from Butte Slough of return water from foreign sources.

³A large percentage of return water in this section is through definite channels which have collected drainage from all of the River Sections considered.

In connection with a study of return water from rice irrigation, a somewhat significant fact is brought out in comparing the average amount of water diverted by the rice projects as heretofore described with the average net use of water at the fields as described in Bulletin No. 325 of the College of Agriculture, Agricultural Experiment Station, University of California. As stated in this bulletin, the result of rice irrigation measurements and experiments in the Sacramento Valley carried on from 1914 to 1919 by the experiment station in cooperation with the State Water Commission showed that "An annual depth of five feet of irrigation water for rice is sufficient for the principal rice soils of the Sacramento Valley, viz, for the clays and clay adobes of the Willows, Stockton, Sacramento, Capay and Yolo Series". As shown in this bulletin the seasonal use of a five-foot depth of water represents the net use of water at the fields after allowance for controllable losses and waste has been made. With, then, a net use at the fields of 5 acre-feet per acre and diversion at the pumping plants on the large projects of 7 acre-feet per acre, it would appear that there should be available as return water for lower users somewhere between one and two acre-feet per acre, allowing for canal loss not returning to the river but percolating to ground water.

Future Development.

With a return to stabilized conditions, the future of the Sacramento Valley irrigation development, and especially that of the rice development, will depend chiefly upon such factors as the market prices, water supply, drainage, the success of the struggle with water-grass and the total area of land properly suited to rice culture. These factors are all inter-related. With a normal price for rice the cost of water must be kept down. To keep the cost of water down it will be necessary to use only those lands with soils such that an excessive use of water is not required. With the increasing demand for water, the shortage of supply will also require the most economical use of water. With normal conditions the excessive cost of drainage works to prevent the well-known injury that results to lands from rise of ground water and

attendant damage from alkali, will, in the case of the pervious soils, eliminate their use for rice. The necessity of thorough drainage on any rice lands, not only to keep these soils good for rice, but to prevent damage to other lands, must be more carefully considered in proportioning the future costs.

The development of the Sacramento Valley has been so rapid and the problems encountered are so peculiar to the valley that a considerable further study of water problems is necessary. It is believed that the work done so far lays the foundation for the more extensive and intensive study and field investigation which should be in progress during the next several years.

APPENDIX III.

RETURN WATER IN THE LOWER SAN JOAQUIN VALLEY.

Experience in irrigation development has proved that not all of the water diverted from streams and applied to the irrigation of crops is consumed by the latter or evaporated from the ground surface. A certain amount is lost by seepage from canals and laterals, some by waste from fields and ditches and an additional quantity, on being applied to crops, passes on down below the root zone of the plants, and beyond the depth from which it can again be drawn to the ground surface by capillarity and evaporated.

This water eventually reaches drainage channels, or passes to the water table underlying the irrigated lands, in the latter case either raising it to a point sufficiently near the ground to allow capillarity to again draw it to the surface, or causing a slow underflow towards lower levels. If good drainage does not exist "seepage" of lower lands results from rising water table. If drainage is present, either natural or artificial, a flow of water occurs in the drainage channels.

The importance of the above lies in the fact that where physical conditions permit, a considerable amount of the water diverted and used on the higher lands can be recovered and used again, resulting in an increase in the total acreage which can be irrigated from any given stream.

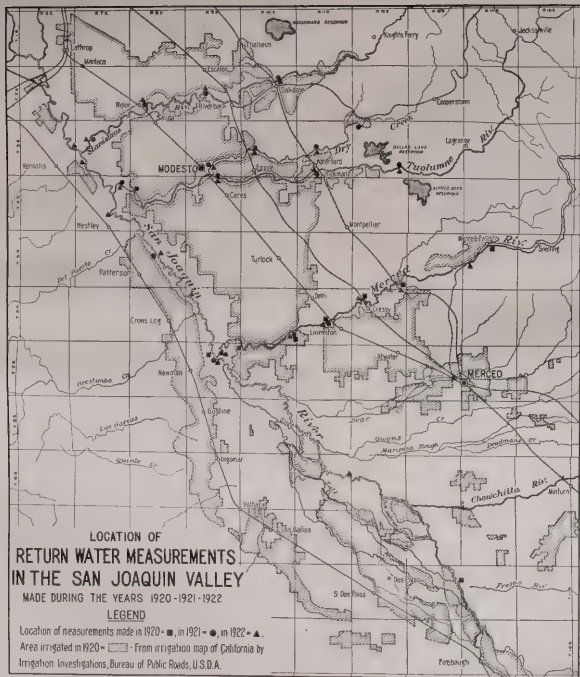

In many parts of the state water has not become sufficiently valuable as yet to make economically feasible the lining of main canals or laterals, or placing the land in such shape that a minimum quantity only of water need be used, and it is doubtful whether the time will ever come when the value of water used or crops raised will be sufficient to make profitable installation of irrigation systems and preparation of land so that only the actual water consumed by the plants will need to be diverted.

Two methods are generally available for recovering this "return" water, as it is called, by pumping from wells located through the lower areas, or by diversion works located on the drainage or natural channels in which the return water accumulates.

The percentage of the water diverted and used for irrigation of upper lands, which again becomes available, it as yet more a matter of conjecture than of specific knowledge. So many factors and local conditions of soil, crops, climate and topography enter into the situation that results obtained in one locality are seldom applicable to others.

The topography of the great Central Valley of California, particularly that of the San Joaquin Valley, affords an ideal situation for the utilization of return flow. Development in this valley during the last twenty years has resulted in the water of the main streams which enter the valley being entirely diverted during the summer months for irrigation. In spite of this fact, however, a considerable flow occurs in their lower reaches.

The Division of Water Rights has received a number of applications for the appropriation of water for irrigation from the lower portions of these streams, and there are in existence also a number of diversions based upon riparian rights and old rights by appropriation.

With the increase in acreage brought under irrigation through new projects, and the general rise in the water table from irrigation as time goes on, the amount of return flow will increase. In order to allow the Division to act intelligently upon existing applications, it was realized that more information must be obtained relative to the amount, nature and occurrence of this return flow.

Records of the discharge of the main streams entering the valley have been kept at stations located near the foothills, by the water resources branch of the United States Geological Survey, for the last twenty or more years. A few measurements were made during the period 1914 to 1919, under the direction of T. H. Means, consulting engineer of San Francisco, of the flow at various points on the main streams.

In the fall of 1920, a series of measurements were made by the Division on the Merced and San Joaquin rivers; in 1921 and 1922, on the Merced, San Joaquin, Stanislaus and Tuolumne rivers and Dry Creek, tributary to the Tuolumne. In addition to the measurements on the streams themselves all diversions were measured, in order to ascertain the total amount of water which the return flow furnished.

The following table gives a summary of these measurements:

TABLE 17.

Return Flow in San Joaquin Valley Streams During the Years 1920 to 1922.

(Measurements made under the direction of the Division of Water Rights, State Department of Public Works).

Stream	Measurements		Amount flowing, second-feet	Total diversions, second-feet	Total return flow, second-feet
	Date	Location			
Merced River.....	9/12/20	Three miles above San Joaquin River.....	38.6	15.6	54.2
	8/2 and 3/21	One-half mile above San Joaquin River.....	82	1	82
	10/6 and 7/22	One-half mile above San Joaquin River.....	76	32.1	108.1
Tuolumne River....	9/29/21	One and one-half miles above San Joaquin River.....	342	0	342
	10/2 and 3/22	One and one-half miles above San Joaquin River.....	366	0	366
Dry Creek.....	9/30/21	One-half mile above Tuolumne River.....	39.9	0	39.9
	10/3/22	One-half mile above Tuolumne River.....	41.0	0	41.0
Stanislaus River....	9/28/21	Two miles above San Joaquin River.....	133	0	133
	10/4/22	Two miles above San Joaquin River.....	131	15.7	146.7
San Joaquin River..	9/20 to 23/20	One-fourth mile below Patterson Colony Pumping Plant.....	4	² 170	² 174
	9/28 to 30/22	Three-fourths mile above Durham Ferry....	725	² 148	² 873

¹Diversions not noted.

²Includes diversions on San Joaquin River only.

The map on Plate 14 shows the locations at which these measurements were made, and also the areas under irrigation in 1920, as given on the irrigation map of Central California, published by the office of Irrigation Investigations, Bureau of Public Roads and Rural Engineering, United States Department of Agriculture.

Plates 15, 16 and 17, show graphically the results of these measurements, and the rate of accretion of flow in the various sections of the stream.

To facilitate interpretation of the results obtained in these measurements, the following remarks are pertinent:

Merced River.

This stream furnished a total return flow including diversions, varying from fifty-four to one hundred and eight second-feet during the fall of the years 1920 to 1922. The rates of accretion and total flow are relatively small compared with the other streams, due to the smaller irrigated acreage in proximity to the river, and the lesser depth of the channel below the water table of the surrounding lands. A number of pumping plants are installed on the lower reaches, and irrigate adjacent lands.

Tuolumne River.

This stream runs through the Turlock and Modesto Irrigation Districts and had return flows of three hundred and forty-two and three hundred and sixty-six second-feet in the falls of 1921 and 1922, respectively. The diversion canals of the districts follow the river for a considerable distance below the La Grange diversion dam, and the Davis Reservoir of the Turlock Irrigation District is located near the river channel. These factors account for the high rate of accretion in the upper section of the channel. The increase in rate in the lower portion is caused by drainage ditches entering the channel from the north. The length of time during which irrigation has been practiced in these two districts, the proximity of a large area of irrigated land to the river, and the depth of the channel, cause the amount of return water in this stream to be larger than in any of the others.

Dry Creek.

This stream runs through the upper irrigated lands on the north side of the Tuolumne River, and had a return flow of about forty second feet.

Stanislaus River.

The more recent development of irrigated area along this stream, the fact that the canals of the Oakdale and South San Joaquin Irrigation Districts do not follow the river for any great distance, and the small amount of irrigated land in proximity to the lower section of the channel cause the return flow of the Stanislaus to be a little over one-third that of the Tuolumne.

San Joaquin River.

Measurements made in 1920 and 1921 were not carried below the Patterson Colony diversion, but indicate a considerable return flow above the mouth of the Merced in these years. The total return flow below the mouth of the Stanislaus, in 1922, including diversions totaling one hundred and forty-eight second-feet, amounted to eight hundred and seventy-three second-feet. Subtracting from this amount, the contributions of the Merced, Tuolumne and Stanislaus, totaling 573 second-feet, the net return flow was three hundred second-feet. Most of this accretion occurred below the mouth of the Merced, where the irrigated area lies close to the stream. Continued irrigation, and further development of drainage in the lower lands of the valley may increase the rate of accretion considerably.

RATE OF ACCRETION OF RETURN FLOW IN MERCED AND STANISLAUS RIVERS

MEASUREMENTS MADE UNDER DIRECTION OF DIVISION OF WATER RIGHTS

MERCED RIVER

STANISLAUS RIVER

RATE OF ACCRETION OF RETURN FLOW IN DRY CREEK AND TUOLUMNE RIVER

MEASUREMENTS MADE UNDER DIRECTION OF DIVISION OF WATER RIGHTS

DRY CREEK

TUOLUMNE RIVER

RATE OF ACCRETION OF RETURN FLOW IN SAN JOAQUIN RIVER

PLATE 17.

On account of the short period during which the investigations have been carried on, no deductions can be drawn as yet, beyond the fact that the amount of return flow is sufficient to make it a factor of greatest importance in the irrigation development in the San Joaquin Valley, and the fact that the rate of accretion in various sections of stream channels appears to remain rather constant from year to year.

APPENDIX IV.

REPORT TO THE DIVISION OF WATER RIGHTS, DEPARTMENT OF PUBLIC WORKS, ON THE PROGRESS OF THE COOPERATIVE SURFACE WATER INVESTIGATIONS IN CALIFORNIA BY THE WATER RESOURCES BRANCH OF THE UNITED STATES GEOLOGICAL SURVEY FOR 1921-1922.

By H. D. McGLASHAN, District Engineer, United States Geological Survey.

The cooperative investigation of the surface water resources of the State of California during the years 1921 and 1922 has been maintained on about the same basis as given in your last biennial report except that through cooperation with permittees and licensees of the Federal Power Commission twenty-three new stations have been established. These stations are all located at high elevations and will furnish very valuable run-off records.

As in previous years, the funds furnished by the Division of Water Rights have been expended chiefly in a study of the general water supply of the state. The additional funds available during the past year have permitted more intensive field work, resulting in an increased accuracy in run-off records and the establishment of new stations, chiefly in the drainage basins of Pit River, American River, Kings River, and upper San Joaquin. These records are needed by your office in connection with applications for power and irrigation uses. In addition, special investigations and miscellaneous measurements have been made as requested by your office.

The intensive water resources investigation in southern California, explained in your last report, has been continued and slightly extended.

The amount of work done and its costs, including estimated expenditures for complete records furnished free for publication, for the two-year period ending June 30, 1922, were as follows:

TABLE 18.
Data as to Measuring Stations in California.

Drainage	Number of stations			Number of discharge measurements			Cost		
	Established	Discontinued	Maintained June 30, 1922	At regular stations	Miscellaneous	Total	Operation and maintenance	New construction	Average cost per station of twelve months record, including new construction, top cost, and office work
Sacramento...	21	0	57	538	88	626	\$11,236 74	\$10,749 78	\$323 18
San Joaquin...	24	0	72	1,666	223	1,889	83,907 49	56,144 18	1,194 36
South Pacific...	11	3	58	2,334	758	3,092	22,661 14	4,779 08	353 76
North Pacific...	3	0	9	122	1	123	2,260 90	1,683 44	337 54
Great Basin...	0	0	14	119	19	138	2,259 84	0 00	123 20
Totals....	59	3	210	4,779	1,089	5,868	\$122,326 11	\$73,356 48	

In your last report attention was called to the deficient run-off for the years 1917-1920. It appears that the cycle of dry years has not yet been passed. The following table gives the percentage of run-off compared with the 26-year mean, for Sacramento River near Red Bluff and Kings River near Sanger:

TABLE 19.
Comparative Discharges, Sacramento and Kings Rivers.

River	1917	1918	1919	1920	1921	1922	Mean
	per cent	per cent	per cent	per cent	per cent	per cent	per cent
Sacramento River.....	72	54	79	40	117	65	71
Kings River.....	101	73	64	75	82	117	85

A large amount of additional storage is needed in the Sacramento and San Joaquin drainage basins to conserve the winter run-off which is now wasted into the Pacific Ocean. It appears that there is feasible storage for a considerable amount of the flood waters now being wasted. In connection with the investigation now under way of the unconstructed reservoir capacity in the state, funds should be made available for the installation and maintenance of river measurement stations which will furnish run-off records necessary for the proper design of the dams and other structures.

The following Surface Water-Supply Papers, containing California records, have been published since your last biennial report:

- Paper 447. Surface Water Supply of the Pacific Slope of Southern California, which contains all stream flow records collected in Southern California to September 30, 1918.
- Paper 460. Annual Progress Report of Great Basin for the year ending September 30, 1917.
- Paper 461. Annual Progress Report of California for the year ending September 30, 1917.
- Paper 481. Annual Progress Report of California for the year ending September 30, 1918.

Water-Supply Paper 480, for 1918; 510 and 511, for 1919 and 1920; and 530 and 531, for 1921, are in process of publication. All California records included in these unpublished reports and many complete records for 1922 are now available for distribution upon application to this office. In addition, monthly summaries of stream flow, for all the years of record, have been compiled for all river measurement stations now in operation. These tables are very convenient for the public as many of the Water-Supply Papers are out of print and the latest records are not yet available in printed form.

In the administration of the work of the water resources branch of the Geological Survey, the district office is maintained at 328 Custom House, San Francisco. A sub-office is retained at 602 Federal Building, Los Angeles, for the convenience of southern California and as a headquarters for work in the South Pacific drainage. Records of stream flow for all sections of the United States and data collected by other branches of the survey may be consulted at either office.

The water resources investigation in California is under the general supervision of Mr. N. C. Grover, chief hydraulic engineer, and Mr. John C. Hoyt, hydraulic engineer in charge of surface waters for the Geological Survey.

APPENDIX V.

REPORT ON WATER RESOURCES INVESTIGATION.

There was appropriated by the 1921 legislature for the use of the Water Commission a special fund of \$50,000. The text of Chapter 411 creating this fund is as follows:

“Section 1. It shall be the duty of the State Water Commission to make such investigations of the water resources of the State of California, as may be necessary for the purposes of securing information needed in connection with applications for appropriations of the waters of the State of California made before said state water commission.

“Section 2. The sum of fifty thousand dollars, or so much thereof as may be necessary, is hereby appropriated out of any money in the state treasury not otherwise appropriated to be expended by the State Water Commission in carrying out the purposes of this act.”

The funds available under this appropriation have been and are being expended by the Division of Water Rights in the collection of general data necessary for action on applications, and for the direct investigation of the same, which work is fully described in other chapters of this report. The particular items, the expense of which have been defrayed from this fund are as follows:

Cooperation to the extent of \$10,000 per year with the United States Geological Survey in the collection of stream-flow records. (Chapter VI).

Special Investigations—San Jacinto, Kings, San Joaquin rivers, etc. (Chapter V).

Field investigation of applications as described in “Field Procedure” in Chapter II. This item has been only partially met from this appropriation.

The income and expense from this fund to date is included in the financial statement in Appendix VI.

APPENDIX VI.

FINANCIAL STATEMENT.

APPENDIX VII

STATISTICAL TABLES

TABLE NO 20.

Important Proposed Irrigation Projects as Indicated by Applications to Appropriate Water Filed During the Biennial Period Ending September 1, 1922.

NOTE.—All projects of 500 acres or more are listed by name. Projects of less than 500 acres, including domestic and industrial applications, are shown as a single group at the end of the table. Cancelled filings are not included.

Name of applicant	Applica- tion number	County	Source of supply	Amount of water		Acres to be irrigated	Estimated cost
				Natural flow, second-feet	Storage, acre-feet		
H. R. Peckham.....	2000	San Diego.....	Pauma Creek.....	10.00	12,000	5,000	\$100,000
E. B. Meyers.....	2002	Colusa.....	Sacramento River.....	5.19	---	519	10,000
Yuba Development Company.....	2004	Yuba.....	Yuba River.....	---	20,000	10,000	3,500,000
J. G. Hooper, Jr.....	2016	Lassen.....	Long Valley Creek.....	---	17,000	3,275	216,000
J. J. Greive et al.....	2019	Siskiyou.....	Jenny Creek.....	5.25	---	501	2,000
J. B. Thompson.....	2029	Butte.....	Butte Creek.....	140.00	100,000	100,000	---
Foothill Irrigation District.....	2042	Fresno.....	Kings River.....	300.00	100,000	57,000	---
H. R. Peckham.....	2055	San Diego.....	West Fork San Luis Rey River.....	1,000.00	12,000	200,000	50,000
Moreced Irrigation District.....	2062	Merced.....	Burns Creek.....	22.00	---	1,800	20,000
F. L. Fehren.....	2083	Santa Clara.....	Llajas Creek.....	6.67	---	533	5,000
J. P. Vinet.....	2086	San Joaquin.....	Lone Tree Creek.....	6.70	---	536	3,000
P. T. Williamson.....	2091	San Joaquin.....	San Joaquin River.....	---	2,635	501	4,000
H. M. Roberts.....	2093	Medoc.....	Antelope Flat Drainage Area.....	---	---	1,252	---
W. J. Hole.....	2096	Riverside.....	Drainage Area.....	9.00	---	66,000	---
M. I. Crocker et al.....	2099	Amador.....	North Fork Mokelumne River.....	---	60,000	---	---
Santa Clara Valley Water Conservation Committee.....	2103	Santa Clara.....	Arroyo Calero.....	30.00	8,000	---	---
Santa Clara Valley Water Conservation Committee.....	2104	Santa Clara.....	Llajas Creek.....	50.00	15,000	---	---
Santa Clara Valley Water Conservation Committee.....	2105	Santa Clara.....	Uvas Creek.....	80.00	25,000	150,000	---
Santa Clara Valley Water Conservation Committee.....	2106	Santa Clara.....	Almaden Creek.....	30.00	6,000	---	---
Santa Clara Valley Water Conservation Committee.....	2107	Santa Clara.....	Coyote River and Los Animas Creek.....	200.00	120,000	130,000	---
O. Scribner.....	2121	Eldorado.....	Cosumnes River.....	276.00	---	45,000	---
O. Scribner.....	2123	Amador.....	Dry Creek.....	145.00	---	---	36,000
Excelsior Water and Power Company.....	2126	Nevada.....	Squirrel Creek.....	---	20,000	---	3,025,000
Excelsior Water and Power Company.....	2130	Nevada.....	Deer Creek.....	225.00	150,000	120,000	2,634,000
Excelsior Water and Power Company.....	2131	Nevada.....	South Fork of Yuba River.....	125.00	60,000	---	---
Santa Clara Valley Water Conservation Committee.....	2136	Santa Clara.....	Calabasas Creek.....	20.00	1,500	---	---
Santa Clara Valley Water Conservation Committee.....	2137	Santa Clara.....	Guadalupe Creek.....	50.00	6,000	150,000	---
Santa Clara Valley Water Conservation Committee.....	2138	Santa Clara.....	Stevens Creek.....	50.00	7,000	---	---
Santa Clara Valley Water Conservation Committee.....	2140	Tehama.....	Underground water.....	80.00	---	7,561	461,630
W. H. Baymiller for El Camano Irrigation District.....	2142	Butte.....	Lost Creek.....	---	45,000	31,650	---
Oroville-Wyandotte Irrigation District.....	2144	Yuba.....	Slate Creek.....	---	100,000	17,000	---
Oroville-Wyandotte Irrigation District.....	2145	Yuba.....	Dry Creek.....	---	5,000	31,650	---
Oroville-Wyandotte Irrigation District.....	2146	Eldorado.....	South Fork American River and Webber Creek.....	330.00	20,000	80,870	3,500,000
R. E. Swigart, Klamath-Shasta Valley Irrigation District.....	2149	Klamath County, Ore.....	Klamath.....	---	150,000	40,000	---
L. C. Hall.....	2152	Inyo.....	Lakes and creeks tributary to So. Bishop Creek.....	---	4,544	3,240	40,000

R. E. Fairchild	2166	San Bernardino	Santa Ana River and Forsee Creek	50.00	15,000	3,000	15,000
G. F. Taylor et al.	2186	Plumas	Bucks Creek		70,000	30,000	300,000
San Diego Mutual Water Company	2188	San Diego	Escondido Creek	8.00	12,011	3,600	2,250,000
R. H. Elliott	2196	Yuba	South Fork of North Fork, Yuba River		79,100		
W. Neumann	2201	Fresno	Big Panoche Creek	500.00	250,000	150,000	1,600,000
Excelsior Water and Power Company	2202	Nevada	Middle Fork Yuba River		110,000	120,000	41,500
Excelsior Water and Power Company	2206	Nevada	South Fork of Middle Yuba River	50.00			
Honcut-Yuba Irrigation District	2208	Butte	Wyman Ravine	75.00		30,000	2,000
Honcut-Yuba Irrigation District	2209	Butte	South Honcut Creek	75.00		30,000	2,500
Honcut-Yuba Irrigation District	2210	Butte	North Honcut Creek				
United States Reclamation Service	2212	Tehama	Stony Creek and tributaries		150,000	30,000	3,000,000
T. Pearson for proposed Magalia Irrigation District	2215	Butte	Little Butte Creek		5,000	7,000	25,000
T. Pearson for proposed Magalia Irrigation District	2216	Butte	Little West Branch of Feather River		10,000	3,000	100,000
Water Conservation Association	2217	San Bernardino	Santa Ana River	150.00			1,100
R. C. Hackley	2219	Plumas	Grizzly Creek		90,000	40,000	2,500,000
R. B. Marshall	2220	Stanislaus	San Joaquin River	10.00		700	
Walker River Irrigation District	2221	Mono	West Walker River		85,000		449,000
Walker River Irrigation District	2222	Mono	West Walker River		35,000	140,260	500,000
Walker River Irrigation District	2223	Mono	West Walker River		115,000		500,000
C. W. Clark Company	2227	Lassen	Coyote Flat		7,100	4,360	6,100
J. A. Trow	2231	Los Angeles	Big Rock Creek	50.00	125,000	3,640	250,000
T. G. Carpenter	2232	Riverside	Underground stream	10.00		635	7,500
Butte Valley Irrigation District	2234	Siskiyou	Antelope and Butte Creeks	250.00	20,000	31,628	940,000
M. J. Howells for Thermalito and Table Mountain Irrigation Districts							
Little Baldy Water Company	2240	Butte	West Branch Feather River	28.00		5,581	
Excelsior Water and Power Company	2242	Los Angeles	Dead Man's Canyon	15.00	123	1,160	32,000
R. C. Hackley	2243	Nevada	Canyon Creek		72,000		6,500,000
G. M. Trent	2253	Butte	Middle Fork Feather River	500.00	50,000	25,000	2,500,000
Moreno Mutual Irrigation Company	2259	Alpine	West Fork Carson River	4.00	50,000	40,000	2,000,000
Moreno Mutual Irrigation Company	2260	Riverside	Headwaters Singleton Creek		850	5,000	197,000
Eldorado County Irrigation Committee	2261	Riverside	Headwaters Singleton Creek				
Eldorado County Irrigation Committee	2270	Eldorado	N. Fk. Cosumnes River, Camp and Park Creeks	150.00	70,000	78,134	1,030,000
J. E. Taylor et al. for Nevada Irrigation District	2271	Eldorado	N. Fk. Cosumnes River, Camp and Clear Creeks	135.00	25,000		
J. E. Taylor et al. for Nevada Irrigation District	2273	Sierra	South Fork of North Yuba River		75,000		
J. E. Taylor et al. for Nevada Irrigation District	2276	Nevada	Middle Fork Yuba River	400.00	75,000		
J. E. Taylor et al. for Nevada Irrigation District	2277	Nevada	South Fork of Middle Yuba River		25,000		
J. E. Taylor et al. for Nevada Irrigation District	2278	Nevada	Deer Creek		75,000		
I. B. Parsons	2285	Yolo	Borrow Pit Reclamation District No. 999	50.00		850	5,000
A. O. Stewart	2286	San Joaquin	Barge Canal	100.00		8,350	330,000
C. L. Hutchinson et al.	2296	Sacramento	Cosumnes River	16.00		1,292	30,000
San Diego Mutual Water Company	12-2315	Sacramento	San Diegoito River		37,700	18,000	1,370,000
Felix Swan for East Dixon Irrigation and Drainage Association	2318	Solano	Sacramento River	600.00	64,000	64,000	
Folsom State Prison	2322	Placer	South Fork American River	8.00		1,286	
Butte Valley Irrigation District	2326	Siskiyou	Bear Creek	100.00	22,170	31,628	940,000
H. and S. Albright	2338	San Bernardino-Riverside	Whitewater River, Tahquitz and Palm Canyon Creeks				
Lake Hornet Water Company	2341	Riverside	Strawberry Creek		52,000	22,720	10,000
E. H. Libby	2344	Los Angeles	Pallett and Big Rock Creeks		18,000	12,502	665,000
West Stanislaus Irrigation District	2349	Stanislaus	San Joaquin River		30,000	10,000	
Little Rock Power and Water Company	2352	Los Angeles	Little Rock Creek	168.00	7,500	13,748	650,000
J. C. Knowles	2360	Napa	Trout Creek		2,000	7,500	20,000
J. C. Knowles	2361	Napa	Horseshief Creek		1,499	1,499	80,000

TABLE NO. 20—Continued.
Important Proposed Irrigation Projects as Indicated by Applications to Appropriate Water Filed During the Biennial Period Ending September 1, 1922.

NOTE.—All projects of 500 acres or more are listed by name. Projects of less than 500 acres, including domestic and industrial applications, are shown as a single group at the end of the table. Cancelled filings are not included.

Name of applicant	Applica- tion number	County	Source of supply	Amount of water		Acres to be irrigated	Estimated cost
				Natural flow, second-feet	Storage, acre-feet		
Great Western Power Company	2368	Butte, Plumas	Feather River and Bucks Creek	124.00	18,400		
Great Western Power Company	2371	Butte, Plumas	Feather River and Rock, North Valley, Little Kinshew and Crane Valley Creeks.	162.00	24,800	30,000	4,300,000
F. H. Tibbetts for Nevada Irrigation District	2373	Nevada	South Wolf Creek	150.00	50,000		
G. M. and J. E. Clark	2383	Modoc	Juniper Gulch		1,270	578	15,000
E. P. Vandercook for proposed Feather River Irrigation District	2387	Butte, Plumas	Feather River, Nelson, North Valley, Indian, Little Kinshew, Kinshew, Rock, Pond, Chips, Soda, Grizzly and Taylor Creeks, and Cham- bers, Spring Valley, Campbell, Lotts, Morris and unnamed (3) lakes.				
Honcut-Yuba Irrigation District	2393	Yuba	Yuba River	250	160,000	20,000	
J. E. White	2401	Ventura	Ventura River	1,000.00		31,500	
Los Verjels Land and Water Company	12-2406	Yuba	Dry Creek	10.00	20,000	26,000	
A. L. Landis	2408	Sacramento	Laguna Creek	275.00		5,675	
A. L. Landis	2409	Amador	Mokelumne River	5,000.00	15,000		
A. L. Landis	2410	Sacramento	Dry Creek	11,000.00	800,000		15,000,000
A. L. Landis	2411	Amador	Dry Creek	17,000.00	200,000		
M. J. Howells for Thermalito and Table Mountain Irrigation Dis- trict	2417	Butte	Cosumnes River	7,000.00	400,000		
San Dimas Land and Water Company	2418	Los Angeles	Dry Creek		12,000	11,000	175,000
Sierra Land and Water Company	2432	Mono	San Dimas Canyon	15.00		620	
Guy Wilkinson	2434	Butte	Rush Creek	500.00	44,670	44,045	637,152
Waterson Brothers, Incorporated	2445	Inyo	Feather River	40.00		5,000	
M. C. Seagrave	2452	Eldorado	Bishop Creek, North, Long and Unnamed Lakes	250.00	20,000	5,000	
W. S. Davison, for proposed Irrigation District	2454	Solano	North Fork Cosumnes River	100.00		15,000	250,000
Temescal Water Company	2473	Riverside	Suisun Creek	200.00	10,000	20,640	
Temescal Water Company	2474	Riverside	Horsethief Canyon Creek		2,000		
Temescal Water Company	2475	Riverside	Maynew Creek	5.00	2,000		12,000
Temescal Water Company	2476	Riverside	Cold Water Creek	10.00	3,000	5,000	
W. Neumann et al.	2482	San Benito	San Benito River, James, Rock Springs, Salt, Tres Pinos and eight unnamed creeks.		4,000		
W. Neumann et al.	2483	San Benito	Lewis and eight unnamed creeks		302,000	150,000	
W. Neumann et al.	2484	San Benito	Los Aquilas and four unnamed creeks		100,000		
W. Neumann et al.	2485	Fresno	Little Panoche Creek	250.00	56,000		
O. H. Cash, trustee Perris Valley Chamber of Commerce	2507	Riverside	Potrero Creek	8.00	25,000	4,600	495,000

Waits Brothers.....	2508	Sierra.....	Dog Creek.....	8,000	2,000	138,575
R. J. Shields.....	2512	Sutter.....	Feather River.....	7.00	620	15,000
South San Joaquin Irrigation District.....	2524	Calaveras.....	Stanislaus River.....	36,000	71,081	500,000
Excelsior Water and Power Company.....	2527	Nevada.....	Deer Creek.....	625.00	120,000	2,194,000
Butte Valley Irrigation District.....	2531	Siskiyou.....	Butte Lake.....	10,000	31,628	940,000
J. W. Preston, Jr.....	2535	Amador.....	North Fork Mokelumne River.....	275.00	50,000	20,000
Beckman and Linden Engineering Corporation.....	2556	Amador, Calaveras.....	Calaveras and Mokelumne Rivers.....	200,000	200,000	10,000,000
Bear River Water and Power Company.....	2564	Placer.....	Bear River.....	262.00	60,000	300,000
W. D. McPherson, proposed irrigation district.....	2568	Mono.....	Owens River.....	2,000.00	300,000	800,000
W. D. McPherson, proposed irrigation district.....	2569	Mono.....	Rush Creek.....	750.00	70,000	300,000
W. D. McPherson, proposed irrigation district.....	2570	Mono.....	Underground waters of Mono Lake.....	2,500.00	40,000	500,000
W. D. McPherson, proposed irrigation district.....	2571	Ventura.....	Lee Vining and Mill Creeks.....	69.00	4,500	100,000
Leeds and Barnard for Irrigation District.....	2572	San Joaquin.....	North Fork Ventura River.....	6.00	5,442	1,500
River Junction Farms, Incorporated.....	2573	Butte.....	Stanislaus and San Joaquin Rivers.....	15,000	1,617	20,000
J. H. Jones.....	2576	San Bernardino.....	Butte Creek.....	100.00	8,160	20,000
F. S. Lewis et al., proposed Harvard Irrigation District.....	2579	Sacramento.....	Mojave River.....	250.00	20,000	20,000
A. J. Cleary, proposed Roseville Irrigation District.....	2580	Riverside.....	American River.....	15,000	6,000	40,000
N. B. Studley et al.....	2581	Ventura.....	Deep Canyon, Pinyon Flats and Dead Indian Creeks.....	10.00	518	2,000,000
J. E. White.....	2582	Contra Costa.....	Matilija Creek.....	6.48	200,000	200,000
H. L. Hill, Jr.....	2593	Placer.....	Channel connecting Rock and Indian Sloughs.....	100.00	40,000	30,000
F. B. Tuttle, Jr.....	2613	Marin.....	Rubicon River and Middle Fk. American River.....	200.00	10,000	25,000
W. C. Howe et al.....	2617	Riverside.....	Salmon Creek.....	2,500.00	75,000	700,000
H. L. Thompson, Homet Irrigation District.....	2620	Placer.....	North Fork and Strawberry Creeks.....	3.00	500	1,500,000
J. A. Livingston for Mt. Pleasant-Lincoln Irrigation District.....	2626	San Diego.....	Bear River.....	10,500	16,016	1,500,000
Ed. Fletcher et al.....	12-2641	Sacramento.....	San Diego River.....	1,500	600	1,250,000
A. J. Cleary, proposed Roseville Irrigation District.....	2642	Mono.....	American River.....	44,225	720	250,000
J. C. Working and R. L. Gilmore.....	2646	Nevada.....	Dexter, Lee Vining, Gibbs, Rush, Walker, Wilson, Parker and Mill Creeks.....	60.00	5,000	130,000
Nevada Irrigation District.....	2652	Los Angeles.....	Flood waters of Bear River.....	1,829	8,000	1,750,000
H. C. Dunn, trustee for Palmett Creek Water Users Association.....	2669	Los Angeles.....	Pallett Creek.....	15,000	8,500	100,000
Los Angeles County Flood Control District.....	2671	Los Angeles.....	Pacoima Creek.....	150,000	100,000	50,000
Los Angeles County Flood Control District.....	2672	Los Angeles.....	Pacoima Creek.....	2,999	745	20,000

TABLE NO. 20—Concluded.

Important Proposed Irrigation Projects as Indicated by Applications to Appropriate Water Filed During the Biennial Period Ending September 1, 1922.

NOTE.—All projects of 500 acres or more are listed by name. Projects of less than 500 acres, including domestic and industrial applications, are shown as a single group at the end of the table. Cancelled filings are not included.

Name of applicant	Applica- tion number	County	Source of supply	Amount of water		Acres to be irrigated	Estimated cost
				Natural flow, second-feet	Storage, acre-feet		
A. L. Conard for proposed irrigation district.	2763	Tehama	Elder Creek	250.00	100,000	40,000	---
A. L. Conard for proposed irrigation district.	2764	Tehama	Red Bank Creek	200.00	75,000	30,000	---
A. L. Conard for proposed irrigation district.	2765	Tehama	South Fork Cottonwood Creek.	100.00	75,000	30,000	---
A. L. Conard for proposed irrigation district.	2766	Tehama	Thomas Creek	250.00	125,000	50,000	---
I. H. Parker	2772	Placer	Bear River	---	60,000	---	---
Preston School of Industry	2774	Amador	Sutter Creek	8.30	3,750	604	\$75,000
G. H. V. Land Company	2777	Butte	Butte Creek and Hamlin Slough	15.00	---	2,338	2,750
Oroville-Wyandotte Irrigation District	2778	Butte	Lost Creek	50.00	25,000	---	---
W. Neumann	2779	San Benito	Silver Creek	250.00	25,000	150,000	---
F. H. Dam	2794	Yuba, Nevada	Dry Creek and North Fork Wolf Creek.	---	110,000	28,000	1,000,000
Hillside Water Company	2799	Inyo	Bishop Creek	20.00	---	3,945	25,000
Sacramento-San Joaquin Bank	2800	Fresno	Waltham, Canvas, Cantua, Jacalitos, White, Arroyo Hondo, Zapato, Los Gatos and Salt Creeks.	---	500,000	---	---
E. L. Adams et. al.	2805	Butte	Butte Creek	14.00	---	1,215	1,500
Thobo, Starr and Anderton, Incorporated	2810	Eldorado	South Fork American River	1,500.00	500,000	400,000	---
Jas. P. Sweeney	2821	Calaveras	Mokelumne River	500.00	400,000	200,000	5,000,000
R. L. Morehead	2824	Sutter	Sutter Butte By-Pass	9.08	---	728	---

TABLE NO. 21.

Important Proposed Hydro-Electric Power Projects as Indicated by Applications to Appropriate Water Filed During the Biennial Period Ending September 1, 1922.

NOTE.—All projects of 500 theoretical horsepower or more are listed by name. Projects of less than 500 theoretical horsepower are shown as a single group at the end of the table. Cancelled filings are not included.

Name of applicant	Applica- tion number	County	Source of supply	Amount of water		Theoretical power to be developed	Estimate cost
				Natural flow, second-feet	Storage, acre-feet		
R. E. Swigart (Klamath-Shasta Valley Irrigation District)	1996	Siskiyou	Shasta River	750.00	---	25,500	---
Southern Sierras Power Company	1997	San Bernardino	Alder, Lost, Vivian, Willow and High Creeks	20.00	---	4,634	\$500,000
San Diego Consolidated Gas and Electric Company	1998	San Diego	Pauma and Lion Creeks	10.00	12,000	680	110,000
San Diego Consolidated Gas and Electric Company	1999	San Diego	West Fork San Luis Rey River	15.00	12,000	775	235,000
E. Fletcher	2013	San Diego	Boulder Creek	50.00	---	9,222	390,000
San Joaquin Light and Power Corporation	2022	Fresno	North Fork Kings River and Woodchuck, Post Corral, Rancheria and Statum Creeks	200.00	40,000	13,580	---
San Joaquin Light and Power Corporation	2023	Fresno	Burnt Corral, Post Corral and Fleming Creeks	80.00	14,500	14,265	---
San Joaquin Light and Power Corporation	2024	Fresno	Helms Creek	175.00	41,000	23,793	---
San Joaquin Light and Power Corporation	2025	Fresno	Bench Valley Creek, Meadow Brook and North Fork Kings River	140.00	13,000	28,530	---

TABLE NO. 21—Continued.

Important Proposed Hydro-Electric Power Projects as Indicated by Applications to Appropriate Water Filed During the Biennial Period Ending September 1, 1922.

NOTE.—All projects of 500 theoretical horsepower or more are listed by name. Projects of less than 500 theoretical horsepower are shown as a single group at the end of the table. Cancelled filings are not included.

Name of applicant	Appli- cation number	County	Source of supply	Amount of water		Theoreti- cal horse- power to be developed	Estimated cost
				Natural flow, second-feet	Storage, acre-feet		
V. S. Barber	2345	Plumas	Rock and Chambers Creeks and seven lakes at headwaters thereof. North Valley Creek and unnamed creek in Crane Valley. Campbell Lake and unnamed flat on North Valley Creek.	70.00	32,000	10,900	\$1,500,000
V. S. Barber	2347	Plumas	Nelson Creek and East Branch Nelson Creek.	100.00		12,500	400,000
San Joaquin Light and Power Corporation	2363	Fresno	Roaring River.	270.00	25,700	56,763	10,000,000
San Joaquin Light and Power Corporation	2364	Fresno	Bubbs Creek.	170.00	21,000	46,170	9,600,000
San Joaquin Light and Power Corporation	2365	Fresno	Kings River.	1,900.00	1,000	64,772	6,500,000
Great Western Power Company	2369	Plumas	Bucks Creek.	124.00	70,000	43,000	4,300,000
Great Western Power Company	2370	Plumas, Butte	Pine, Rock, North Valley, Little Kimshe and Crane Valley Creeks.	374.00	100,000	48,000	
F. H. Tibbetts	2372	Nevada	Canyon and Fall Creeks.	300.00	100,000		
V. S. Barber	2385	Plumas	Milk Ranch Creek.	60.00	2,800	27,273	
V. S. Barber	2386	Plumas	Chippis Creek, Morris, Lots, Spring Valley and four unnamed lakes.	100.00	9,800	34,090	1,600,000
Sespe Power Corporation	2402	Ventura	Sespe Creek.	135.00	102,000		
Coachella Valley County Water District	2419	San Bernardino	Whitewater River.	10.00		2,500	125,000
Coachella Valley County Water District	2420	San Bernardino	Whitewater River.	20.00		1,800	100,000
Coachella Valley County Water District	2421	San Bernardino	Whitewater River.	30.00		3,070	160,000
Coachella Valley County Water District	2422	Riverside	Whitewater River.	50.00		4,550	273,000
Coachella Valley County Water District	2423	Riverside	Whitewater River.	70.00		4,780	286,800
Coachella Valley County Water District	2424	Riverside	Whitewater River.	90.00		4,100	200,000
Coachella Valley County Water District	2425	Riverside	Middle and West Forks Snow Creeks.	60.00		5,700	250,000
Coachella Valley County Water District	2426	Riverside	Middle and West Forks Snow Creeks.	70.00		7,160	
Guy Wilkinson	2435	Butte	Feather River.	15,000.00		58,646	
Oakdale and South San Joaquin Irrigation District	2460	Tuolumne	Stanislaus River.	2,000.00	150,000	54,000	1,500,000
City of Sacramento	2467	Eldorado	South Fork Silver Creek.	150.00	32,000	11,300	
City of Sacramento	2468	Eldorado	Silver, Onion and Davis Creeks, North and South Forks of Silver Creek and Sugar Pine Creek.	475.00	90,000	110,000	
City of Sacramento	2470	Eldorado	Silver Creek and North and South Forks Silver Creek, Sugar Pine, Onion and Davis Creeks.	250.00	90,000	18,700	
City of Sacramento	2479	Eldorado	North and South Forks Rubicon River and Gerle Creek.	200.00	45,000	54,000	
City of Sacramento	2480	Eldorado	Rubicon River.	150.00	5,000		
City of Sacramento	2481	Eldorado	Gerle Creek.	70.00	42,000

REPORT
OF THE
SPECIAL LEGISLATIVE COMMISSION
ON
Agricultural Education

As authorized by
ASSEMBLY BILL No. 1335
BY THE
FORTY-FOURTH SESSION
OF THE
LEGISLATURE OF CALIFORNIA

CALIFORNIA STATE PRINTING OFFICE.
FRANK J. SMITH, Superintendent
SACRAMENTO, 1923

Agricultural Buildings, Cornell University.

“THERE is evidently no great horde of eager young people clamoring for an opportunity to work out their destinies on the soil. Everywhere enrollment is lower than one would expect it to be in consideration of the character of the states in which the colleges are located. The truth is that the Morrill Act came as a result of the ideas of one man, not in response to a great social need, and the supply of agricultural colleges has been greater than the educational demand ever since. Fortunately, they have abundantly justified themselves in the influence they have exerted, but the disappointment of California at the comparatively small enrolment in its agricultural college is shared by every state which we visited, no matter what the type of institution in it. The more the commission studied this problem the more it was convinced that the problem of increasing enrollment in agricultural colleges and keeping boys on the farm is not to be solved by changes in curriculum, equipment, or method, but by the betterment of the social and economic conditions of rural life. No plan which leaves this out of major consideration is going to succeed in keeping farmers' sons in great numbers on the farm or in attracting the sons of city dwellers to it. This is the great work of the college of agriculture today, and in it the University of California has no superior, so far as we could find.” (See page 48.)

INTRODUCTION TO THE REPORT.

To the HONORABLE WILLIAM D. STEPHENS,
Governor of the State of California.

The report which follows is the report of the Special Commission provided for by Assembly Bill No. 1335, approved by both houses of the forty-fourth session (1921) of the legislature of California, and signed by you, which reads as follows:

CHAPTER 698.

An act to provide for the appointment of a commission to investigate the plan of operation and organization of agricultural colleges in the United States, and to recommend a plan for the reorganization of agricultural instruction in the State of California, and making an appropriation therefor.

(Approved June 3, 1921. In effect August 2, 1921.)

The people of the State of California do enact as follows:

SECTION 1. The governor of this state is hereby authorized and empowered to appoint a commission of seven persons, which commission is hereby charged with the investigation of the entire problem of agricultural instruction and investigation. Said commission shall investigate the plan of operation and organization of the leading agricultural colleges of the United States, and report to the governor before the convening of the forty-fifth session of the legislature their recommendations upon the reorganization of the agricultural instruction as given in the University of California.

SEC. 2. The sum of ten thousand dollars, or so much thereof as may be necessary, is hereby appropriated out of any money in the state treasury not otherwise appropriated for the purpose of carrying on the work of said commission as provided for in this act; said money shall be expended and used for the purpose of paying the necessary expenses of the members of said commission while engaged in the performance of their duties, and for all necessary clerical, printing and other expenses connected with the work of carrying out the provisions of this act. The claims of each shall be audited and approved by the board of control in the manner provided by law, and when so approved the state controller is authorized to draw his warrant therefor, and the treasurer is directed to pay the same.

In pursuance of the above act, Governor William D. Stephens appointed

G. HAROLD POWELL, Los Angeles.
W. S. GUILFORD, Butte City.
DOCTOR ELWOOD MEAD, Berkeley.
J. JAMES HOLLISTER, Gaviota.
SHERIDAN W. BAKER, Santa Rosa.
SAM G. MORTLAND, Fresno.
ROBERT G. SPROUL, Berkeley.

The Commission met and organized at San Francisco, electing Mr. G. Harold Fowell as chairman. Because of the untimely death of Mr. Powell, on February 18, 1922, it was necessary for the Governor to appoint a new member of the commission, which he did, on March 8, 1922, in the person of Mr. A. C. Hardison of Santa Paula, whom the commission elected chairman. Mr. Powell attended but one meeting of the commission and had no part in the formulation of the final report.

The commission afterwards held four meetings in Berkeley, and one each at Davis, Fresno, Ontario, El Centro, Riverside, Los Angeles and San Francisco. Public hearings were held in San Francisco, Red Bluff, Sacramento, Fresno and Los Angeles, at which an effort was made to secure the attendance of farmers, graduates of the College of Agriculture, school men, and other persons interested in public education, and particularly agricultural education.

In accordance with the legislation, the commission also made a trip across the continent, studying the more important recent developments in agricultural education elsewhere with a view to adapting the best educational experience and practice of other states to the needs of California.

Throughout its period of service the commission has been aided very greatly by Mr. R. N. Wilson, secretary of the Agricultural Legislative Committee, whose services were loaned to the commission without cost by the organization which employs him. Mr. Wilson not only performed the routine duties of secretary in a highly acceptable manner, but by his wide acquaintance with the agricultural interests of California and his intelligent knowledge of the problems of the commission contributed greatly to anything of merit which it may have accomplished. The commission was also materially assisted by the helpful cooperation of Dean Thomas F. Hunt, and other members of the staff of the College of Agriculture of the University of California, by Mr. Will C. Wood, Superintendent of Public Instruction, and the members of his organization interested in agricultural education, by Mr. Merton W. Hill, principal of the Chaffey Union Junior College, by Mr. Nicholas Ricciardi, president of the California Polytechnic School and by Mr. Ben R. Walker, associate editor of the *Fresno Republican*, who accompanied the commission on its trip across the continent, at his own expense, gave helpful publicity to its efforts, and brought to its assistance the trained ability of a newspaperman to ascertain, select and classify the essential facts presented by the various colleges and universities visited. Many others too numerous to mention here have given assistance to the commission both in California and outside the state. The commission gratefully acknowledges the contributions of all these persons, both named and unnamed.

From its first meeting the commission has gone on the theory that it was not expected to make an exhaustive survey of the needs and resources of the state in the matter of agricultural education, but that its findings should deal with the general features of the present situation and with principles of action which might improve that situation. It was the opinion of the commission also that the legislature did not intend that it should deal in detail with such highly professional questions as curricula, but rather that it was intended that the commission should study the more general features of administration and teaching with a view to making recommendations for the strengthening and more effective functioning of the state's agricultural educational system. To have adopted any other point of view would have required time, money, expert help and professional ability which the commission did not have and for which the legislature had made no financial provision. The commission has also felt that in dealing with the system of

agricultural education in this state, account should be taken of the nature and direction of the historical development which has taken place since the agricultural college was first contemplated in 1860, and should also be in harmony with the best American experience in the organization and administration of agricultural teaching.

On the basis of these principles, the commission has divided its study into three sections: Elementary and Secondary Schools, Farm Schools, and Universities and Colleges, and as was the plain intent of the bill which created the commission, has concentrated the major part of its time and effort on the latter subdivision. The basis upon which the hearings with reference to universities and colleges were developed is set forth in full in the chapter devoted to those institutions. The study of the commission, of course, went far beyond the formal limits of the questionnaire which is set forth, but it was the basis of study and shows the general character of the problems on which the commission sought light.

The attempt of the commission in the chapters which follow has been to set forth the historical background of each type of institution, the present character and future program of the institution and the conclusions and recommendations of the commission based upon the former two factors. The commission has not, in most cases, made any suggestions as to legislative or administrative details, but has tried to offer a constructive program for improvement which might be worked out over a period of years.

Respectfully submitted.

A. C. HARDISON.
W. S. GUILFORD.
ELWOOD MEAD.
J. JAMES HOLLISTER.
SHERIDAN W. BAKER.
SAM G. MORTLAND.
ROBERT G. SPROUL.

CHAPTER I.

ELEMENTARY AND SECONDARY SCHOOLS.

Recent legislative acts of the national government have provided the basis for a sound countrywide system of agricultural education in public schools of less than university grade. The program outlined in the Smith-Hughes, or Vocational Education Act of 1917, has been adapted to the needs of practically every state in the Union, and whatever differences now exist are not fundamental. The commission, therefore, confined its study of this phase of the problem of agricultural education to a survey of conditions in California alone, thinking it more important to review the local situation than to multiply evidences of the successful application of the broad general theory in the several states visited on its tour of investigation.

Before entering upon a discussion of the system of agricultural education in the schools of California it will be well to briefly review the character and purpose of the National Vocational Education Act. It is by compliance with the requirements of this act that federal funds are made available for the furtherance of agricultural education within the state, and much of our present system of instruction in the elementary schools and the high schools is dependent upon the continuance of this federal aid. As stated in its preamble, the Vocational Education Act is "an act to provide for the promotion of vocational education; to provide for cooperation with the several states in the promotion of such education; to provide for cooperation with the states in the preparation of teachers of vocational subjects; and to appropriate money for these several purposes and to regulate its expenditure." A Federal Board for Vocational Education was created by the act and authorized to carry out its provisions.

The legislature of the State of California accepted the provisions of the Federal Vocational Education Act in an act passed and approved in May, 1917. This act provided, among other things, for the acceptance of funds for the payment of salaries of teachers, directors, and supervisors of agricultural subjects, and the maintenance of courses, classes, or schools for the training of such teachers, directors, and supervisors. Some of the more important articles of the agreement entered into by the California State Board of Education and the Federal Board for Vocational Education for the administration of the federal and state acts may be enumerated as follows:

1. All courses and classes must be under the supervision and control of the public school authorities. The supervision of agricultural education is to be under the direction of a Commissioner of Vocational Education, assisted by a Supervisor of Agricultural Education, both officials to act under the plan of supervision established by the State Board of Education and approved by the Federal Vocational Board.

2. Courses are to be established and maintained only by high school boards. These boards have control of both high schools and intermediate elementary schools.

3. The controlling purpose of all such education is to be the fitting of pupils for the occupation of farming.

4. The instruction in all courses must be of less than collegiate grade.

5. The courses are to be designed for and open to all persons over fourteen years of age.

6. The teachers placed in charge of such courses must hold special certificates in agriculture of the vocational or technical arts type and must be experienced in farming.

7. On the average not less than three hours per day of each pupil's time must be devoted to farm project work and the instruction pertaining thereto; and not less than three hours per day to academic work in class or in school. Each pupil must conduct at least one farm project during the year, such project to be selected separately for each student on the basis of his interest, opportunity, and ability. Project work consists of the production and marketing of farm, orchard, vineyard, or garden crops or of bees, poultry, stock, or other animals and their products. All projects must be conducted on a commercially productive basis. Each pupil must buy, lease, or rent the necessary land and animals, purchase the necessary seed, fertilizers, and feed, rent teams and farm implements, employ labor, market the product, and keep a complete record of all transactions together with the time spent on the project. Final balancing of the books proves the success or failure of the project as a commercial venture. Project work must be supervised by the agricultural teacher.

8. In accepting the terms of the Federal Vocational Education Act the State of California agrees to appropriate one dollar for every dollar received from federal sources for the aid of agricultural education.

Elementary Schools.

Having thus briefly outlined the acts and agreements governing agricultural education in this state we may now turn to consideration of the particular methods employed in the various classes of schools. For more than fifteen years section 1665 of the Political Code of California has required all elementary schools to give instruction "... in nature study, with special reference to agriculture ...". Practically all of our teachers' colleges offer some instruction in agriculture in order that the teachers graduated may be prepared technically to comply with this regulation of the statute. But girls reared in the city generally have little understanding of such conditions and can not be successfully prepared to teach agriculture in a brief auxiliary course of instruction. This fact, combined with a lack of interest or initiative on the part of many country school authorities, has led in the past to a more or less general disregard of the law requiring agricultural instruction in the grade schools. There have been a few notable exceptions to this general statement, but they do not greatly affect its application to the state as a whole.

In the city schools the problem has been and is admittedly a difficult one, but the need is not so pressing as in the rural districts. In Los Angeles, Long Beach, Pasadena, San Diego, and Oakland, work in elementary agriculture and in school and home gardening is now being carried on under the direction of full-time supervisors of agriculture, assisted in some cases by full or part-time agricultural teachers. Pupils

receive instruction in the fundamental facts and theories of plant and animal production and certain semivocational training in the landscaping of school and home grounds and in backyard and vacant lot garden projects.

In rural elementary schools it is now possible to provide instruction in agriculture in one of two ways:

1. High school teachers of agriculture generally devote part of their time to work with pupils of the grade schools.

2. County supervisors of agriculture have been appointed in several counties to organize and oversee agricultural instruction.

High school teachers of agriculture, especially those working under the provisions of the Vocational Education Act, are required to devote part of their time to extension work in their particular high school district. Most often this extension work takes the form of giving lessons in agriculture in the rural grade schools and in organizing and supervising boys' and girls' agricultural clubs. Practically every rural school in the state is now included in or affiliated with some high school district and there has been a steady increase in the number of high schools employing agricultural teachers. Here appears to be the nucleus for a sound and practical system of worth-while instruction in agriculture in the rural grade schools. If every high school in the state employed an agricultural teacher and if the teacher's schedule was so arranged that sufficient time would be available for periodical visits to the elementary schools of the district, much would have been accomplished. On each visit instruction would be given which could be applied to local or community problems and such instruction should be of interest to all pupils in the school. Such a system might well be the means of arousing and sustaining the interest of farm children in farm life and, if it should be, this fact alone would justify the expense involved.

County supervisors of agriculture have been appointed in Fresno, Santa Clara and Kern counties. In Fresno and Santa Clara counties the supervisors devote their full time to organizing and supervising instruction in agriculture in the elementary schools. In Kern County the supervisor's activities are limited to the Kern County Union High School District. This office was made possible by an act of the 1921 legislature which placed \$1400 at the disposal of each county superintendent of schools for every 500 rural pupils enrolled in the county, such money to be used for rural school supervision, although not necessarily for a supervisor of agriculture. County supervisors of agriculture will be chiefly valuable in counties where there are no teachers of agriculture in the high schools capable of or with sufficient time to carry on similar work. It would seem, however, that if it is possible to have a teacher of agriculture in every high school, with time for work in the elementary schools of his district, the necessary instruction would be better given than where one man is serving the entire county and the actual instruction is in the hands of the regular grade school teachers.

In connection with the work now being carried on in the rural elementary schools, some mention should be made of the boys' and girls' agricultural clubs organized under the direction of the Agricultural Extension Service of the University. A large part of this work has

been done in cooperation with the rural school teachers. During the year 1922 there were three hundred and ten clubs in the state with a total enrollment of nearly twenty-four hundred boys and girls. This work is being carried on under the provisions of the Smith-Lever Act passed by the Congress of the United States in 1914. The declared purpose of this act is "to aid in diffusing among the people of the United States useful and practical information on subjects relating to agriculture and home economics and to encourage the application of the same by means of cooperative extension work of the Land Grant Colleges and the United States Department of Agriculture." The agents delegated to supervise this work in California are the county farm advisers, the home demonstration agents, and the boys' and girls' club leaders.

Some question has arisen concerning the possibility of a conflict in the work of extension agents and vocational agricultural teachers and also concerning the propriety of the University carrying on work with children of the state through the elementary schools. This controversy, if it merits such a name, is largely a technical one. The first question has been cleared up to a large extent by a recognition of the diverse nature of the work of the two groups and by supplementary agreements entered into between the directors of each type of educational service. Extension workers, in contradistinction to vocational teachers, do not offer a systematic course of instruction, but deal almost entirely with specific problems of farm practice and business management in particular rural communities. Furthermore, the relationship which should exist between the extension workers (Smith-Lever Act) and vocational teachers (Smith-Hughes Act) has been definitely outlined by an agreement entered into by the United States Department of Agriculture and the Federal Vocational Education Board, an agreement which has been informally amplified and ratified by the proper authorities in this state. The general form of the agreement may be stated as follows:

1. It is to be understood that all agricultural extension work should be administered by those in charge of extension activities in the state and that all vocational education in agriculture should be administered by those in charge of the vocational schools of the state.

2. That all extension work with adults done by teachers in vocational schools be in accordance with the plans of the extension system for the state, and in cooperation with the agent who is in charge of the administration of the extension work in the county.

3. That in counties having vocational schools of agriculture the extension service will conduct its extension work in agriculture with children, chiefly through the organization of clubs for the carrying on of definite pieces of work for the improvement of agricultural practice. The practical agricultural work of the schools will consist chiefly of home project work by the students as a part of the systematic practical instruction provided for in the Smith-Hughes Act. It is advised that in such counties a cooperative agreement be made between the extension authorities and the school authorities whereby it will be arranged for the teachers of agriculture to take part in the extension activities with the children within the territory of the school and that such territory be set forth in the agreement.

4. That in every case care be taken to see that work which is supported by federal funds under any of the aforementioned acts will not in any way duplicate or overlap work being carried on in that same community when that work is supported in any part from another federal fund.

The second question which relates to the activities of the Agricultural Extension Service of the University and the State Board of Education is not strictly a debatable one. It must be admitted that all activities organized in public schools and supervised by teachers in these schools should be under the control of the regularly constituted school authorities. Whenever the State Board of Education is ready and equipped to take over the agricultural club work in the schools, the Agricultural Extension Service of the University will undoubtedly be willing to transfer the burden.

High Schools.

The year 1909 marks the beginning of serious attempts to introduce instruction in agriculture into the curricula of the high schools of the state. During the following eight years approximately one hundred high schools offered, and in some cases maintained, instruction in various agricultural subjects. None of these schools gave a complete course in agriculture, however, and with few exceptions the courses given depended wholly upon classroom work and textbook study. Notable exceptions were the high schools at Bakersfield in Kern County and Gardena in Los Angeles County, both of these schools having acquired school farms upon which the practical aspects of agriculture might be taught and studied. It would be well to note here, however, that both schools have abandoned the idea of training farmers on high school farms. They do not provide normal conditions and have proved expensive to maintain.

The movement to introduce agricultural courses into the secondary school curricula met with indifferent success during this period from 1909 to 1917. This is not surprising inasmuch as it was a period of experimentation and time was needed to adjust educational theories to the needs of the pupil and the community. Perhaps the chief weaknesses displayed in these early attempts were the highly theoretical nature of the courses offered and the general confusion of the purpose of agricultural instruction in secondary schools with the purpose of collegiate instruction in the same subject.

It was not until the Vocational Education Act became effective in 1917 that a policy for the development of agricultural courses in the high schools was adopted which combined the project idea of training in the art and business of farming, with instruction in the science of farming. Since that time steady progress has been made in correlating the work done in class and laboratory with the practical problems encountered in the field. Even students not residing on farms are urged to secure experience by working on farms and, before they have completed their course, they must submit evidence of having worked a definite length of time on an accredited farm, such work to be performed under the supervision of a teacher of agriculture.

When the state accepted the provisions of the Federal Vocational Education Act, the State Board of Education decided that the first step in a sound program for the promotion of vocational education in secondary schools was the development of courses of study and methods of instruction which would be suited to the general and particular needs of various communities. This was and is pioneer work. The State Board of Education has cooperated with local high school boards in the establishment of a limited number of federal and state aided four-year courses in agriculture. The schools giving these courses are well distributed geographically throughout the agricultural regions of the state, only three being located in large cities, namely, Los Angeles, Pasadena, and Oakland.

The locations were all selected with due regard for the agricultural possibilities of the community, the size and the population of the high school district, and the attitude of the school authorities and the people of the community toward the work. No attempt has been made to favor the poorer high school districts with apportionment of federal and state funds. In fact, it has been deemed wiser to secure the cooperation of the wealthier districts in solving the many problems presented so that later, when satisfactory methods and courses of study have been evolved, the poorer districts can be included in the work with a minimum of waste and inefficiency in the expenditure of funds.

Progress has been gratifying although slow. High school boards, principals, and teachers, change so often that it is extremely hard to maintain a constant policy with regard to agricultural instruction in a given community. When difficulties confront the school authorities exploring new educational fields, and the cry is raised for lower taxes, the tendency is to revert to the old classroom, textbook methods of instruction. The terms of the Vocational Education Act and the regulations of the State Board of Education are designed to prevent such retrogression, but the withdrawal of federal and state funds is a negative remedy and does not aid pupils desiring an education in agricultural subjects.

The following table shows the development of courses in agriculture under the provisions of the federal and state vocational education acts from 1917 to date. For purposes of organization and supervision the state has been separated into five regional divisions, the constituent parts of each division having broadly similar problems in the field of agricultural education and practice. The figures are presented for each of these regional divisions.

Number of Schools Offering Courses in Agriculture Under the Provisions of the Federal and State Vocational Education Acts, 1917-1922.

Regional division	1917- 1918	1918- 1919	1919- 1920	1920- 1921	1921- 1922
Southern California-----	6	7	9	11	13
South Coast (Contra Costa to Ventura)-----	0	4	6	7	8
North Coast (Marin to Del Norte)-----	0	4	6	6	8
San Joaquin Valley-----	3	4	6	5	8
Sacramento Valley-----	1	3	5	10	13
Total schools aided-----	10	22	32	39	50
Total enrolment in classes-----	172	337	640	1097	1281

In the year 1922 vocational courses in agriculture were established in sixty high schools in twenty-six counties, the total enrollment being approximately 1500 pupils. Of these schools twenty-five offered a full four-year course and the majority of the remainder a two-year course. For the smaller schools in the poorer districts the two-year course is perhaps all that can be developed at least for some time to come.

If sufficient funds had been available, forty or fifty more high schools would now be conducting vocational courses in agriculture under the federal and state vocational education acts. It is the policy of the State Board of Education to authorize the establishment of only a limited number of courses for which the funds available will be adequate.

It was not the purpose of the federal and state vocational education acts to provide funds for vocational courses already well financed by local communities and there are approximately sixty high schools and junior high schools in the state which are offering agricultural instruction independent of federal and state aid. There is a great variation in both the method and the scope of the work offered in these schools. Some teach entirely from books and others have well organized vocational courses. Some offer only one class in agriculture and others offer a full four-year course. Of the better type, one of the best examples is the Kern County Union High School at Bakersfield. A brief outline of their methods should be of value as they are pioneers in the work and have achieved a marked degree of success in recent years.

Instruction is divided between class, laboratory, and field, approximately one-third of the available time being given to each method of instruction. The practice work, including project work, and boys' club work, is all carried on outside school hours. One type of work is taken up each school year.

First year:

Plant growth and habits
Soils
Vegetable gardening
Poultry raising
Bee keeping
Project allied to class work.

Second year:

Animal husbandry
Dairying
Project allied to class work.

Third year:

Horticulture
Viticulture
Project allied to class work.

Fourth year:

Farm management
Soil conditions
Project in farm management.

In addition to the agricultural courses given in the Kern County High School the agricultural teaching staff, now numbering five people, visits certain of the grammar schools in the county each week and gives agricultural instruction to pupils in the grades. These men do not teach nature study and call it agriculture. They select important agricultural problems of the community and discuss them with the pupils. One hundred and seventy-nine grammar school students were given instruction of this kind last year.

**FEDERAL AND STATE AIDED CLASSES IN AGRICULTURE FOR THE
YEAR 1921 - 1922.**

Location and school	Full-time part-time or special class	No. of classes	Sixty-minute hours of instruction per week	Enrol- ment	Amount of federal and state aid

Totals.....				1,281	\$59,713 86

In addition there are forty high schools and eleven junior high schools offering courses in agriculture which are not reimbursed from state funds.

Junior Colleges.

With the enactment of recent legislation looking toward the development of junior colleges, considerable interest has been manifested in the inclusion of agricultural courses in the curricula of these institutions. The Chaffey Junior College at Ontario is the only institution of its kind in the state which is at present offering instruction comparable to that offered in the first two years of the College of Agriculture, University of California. Schools at Fullerton, Modesto, and Santa Rosa are offering one or more junior college courses in agriculture this year in addition to some basic science courses. Schools at Lodi, Petaluma, Sacramento, Salinas, and Sebastopol are contemplating the establishing of junior college courses in agriculture, as are the Chico and Fresno state teachers colleges. It is probable that when the cost of installing and maintaining a course similar to that given at Chaffey Junior College is realized, many contemplated plans will be modified or abandoned. This opinion is further strengthened by the fact that with the development of the freshman and sophomore courses at the branch of the College of Agriculture at Davis and the possible further duplication of this work under the auspices of the university in southern and central California, there may not be enough demand for further junior colleges of agriculture to justify their existence.

Two types of work may be given profitably in junior colleges of agriculture, the one vocational, the other academic. The first will meet the needs of those who will complete their institutional training when they are graduated from the junior college. It should be organized along vocational lines with due respect for the major agricultural interests of the region in which the school is located, and should not attempt to prepare the student for further work of university grade. The academic courses, on the other hand, should be designed to give students who complete them, junior standing in the university. The courses in the basic sciences and in applied agriculture would of necessity be similar to, if not identical with, the courses given in the first two years of the College of Agriculture at the university. As has been previously stated, the cost of installing and maintaining courses of the latter type would in most cases be prohibitive.

Brief mention should be made here of the remarkable work accomplished by the Chaffey Junior College of Agriculture. It has now been in operation for three years and has become an important part of the educational system in southern California. Primarily its function is to serve the needs of high school graduates and adults who find it difficult or impossible to leave home for further schooling. Certain courses have been planned so that students may receive two years credit toward college graduation. Other courses have been planned for those who wish to broaden their general education, but who do not contemplate attendance at the university. A third group of short courses has been designed for those who can spend only a limited amount of time in school during each year.

The Chaffey school is on a thirty-acre campus in the Ontario-Upland section. Its equipment includes four main buildings devoted to class, laboratory, and library purposes; a greenhouse; a lath house; a gymnasium; and a large athletic field. The library is endowed and contains 15,000 carefully selected volumes which are being added to each year.

In the reading room 100 daily, weekly, and monthly publications are kept on file.

The agricultural instructors at Chaffey Junior College not only give classroom and field instruction, but they also carry on extension work among the farmers of the district and conduct experimental and demonstration plots on the school grounds and on private farms in the vicinity. Courses are offered in citriculture, deciduous fruit culture, animal husbandry, dairying, bee husbandry, poultry husbandry, and in the sciences underlying all branches of agriculture. During the present year enrollment at Chaffey Junior College of Agriculture totaled two hundred and eighty pupils and the average daily attendance has been close to two hundred fifty pupils.

Conclusions of the Commission.

1. The basis for a sound and practical system of agricultural education in the elementary and secondary schools of California has been provided by the Federal and State Vocational Education Acts of 1917.

2. The principal need of the elementary schools of the state is for a competent corps of instructors. If the regular grade teachers are to instruct pupils upon agricultural subjects they must receive a more thorough preparation for the work, and they should be under the close supervision of a specially trained district director of agricultural education. An alternative plan which holds promise of even better results, is to place the actual teaching of agriculture in the grade schools in the hands of the local high school teachers in agriculture. When every high school has an agricultural department this will be a possible and practical solution of the problem of teaching agriculture in the elementary schools.

3. In the high schools the Smith-Hughes work has made a successful beginning and its extension is recommended. The project feature of this type of agricultural instruction has proved particularly valuable. Constant improvement of the high school teaching personnel is distinctly desirable, and is rapidly taking place.

4. Agricultural instruction given in the high schools either now or in the future, should be better correlated with the work given in the College of Agriculture of the university than has been the case in the past. This is a practical possibility under present university requirements and is usually neglected because of unfamiliarity with these requirements.

5. In the opinion of the commission, junior colleges of agriculture, equivalent to the first two years of the college of agriculture in a university, can not be efficiently conducted or adequately financed except by the state. The brilliant record of Chaffey Union Junior College might seem to indicate that this opinion is erroneous, but we believe that the community in which Chaffey is located is unusually rich and we doubt if even it will always bear easily the constantly mounting cost of scientific agricultural education, research, and extension. Whether it will or not, there are certainly few other districts which could copy it, and it is therefore not practical to look in this direction for state development.

6. As a practical substitute for the Chaffey type of school and as a supplement to the College of Agriculture of the University of California and its branches, this commission strongly recommends that consideration be given by the State Board of Education to the extension of agricultural instruction by the project system into the junior colleges. Under this system a reasonable number of junior colleges, strategically located, could, without the very heavy expense of land, buildings, livestock, and farm equipment, conduct worth-while vocational agricultural courses that would be a very serviceable factor in keeping the boy on the farm and fitting him to make of the farm a profitable business venture.

7. Finally, the Commission recommends strongly that support and encouragement be given the branch of the College of Agriculture at Davis where the facilities and staff are of the highest university caliber and guarantee the most successful results in the first two years beyond the high school, both from the point of view of vocational and professional training. This type of school can not be duplicated by any smaller political subdivision than the state, and it should not be duplicated even by the state, which after all has not limitless finances, until the need develops. Neither enrollment nor any other factor indicates that need at the present time, but when such need does appear, it would seem logical that similar institutions should be established in central and southern California.

CHAPTER II.

FARM SCHOOLS.

The State of California has a well-established high school system, including a number of schools offering instruction in agriculture and rural home-making. These schools provide the most efficient and least expensive means both for a general cultural education and for instruction of secondary grade in agriculture and home economics, with the added advantage that they are in the communities where the pupils reside. These schools meet the requirements of the state as college preparatory schools and as vocational schools of secondary grade.

On the other hand, the College of Agriculture of the University of California provides adequate higher instruction. This instruction, by its very nature, requires a large staff of specialists and relatively expensive equipment. The College of Agriculture can for the present meet every need of California with respect to collegiate instruction in agriculture; it requires only additional funds and facilities to make fully available its very efficient staff. No state in the Union has more than one state college of agriculture (except the negro colleges in the south), and it seems highly doubtful if even California can at this time afford to maintain more than one.

Between these two groups of institutions there is a limited educational service to be rendered by what are generally known as farm schools. These should be vocational training schools of secondary grade, teaching the practical handicrafts and well-established principles of agriculture and home-making to relatively immature persons, or to those whose time or educational limitations will not permit more extended training. They are, in part, maintained by Smith-Hughes funds and are subject to the provisions of the Smith-Hughes Act "that such education shall be of less than college grade and be designed to meet the needs of persons over fourteen years of age who have entered upon, or who are preparing to enter upon, the work of the farm or of the farm home." This act recognizes distinctly the secondary school pupil and no other.

It is of great importance that California definitely determine its policy with reference to these special schools basing it on a clear knowledge of the educational service to be rendered by such schools and of their relation to other units in the educational system. The highest efficiency and the greatest economy of educational organization and administration can be obtained only through a clear differentiation of purpose and functions among the various classes and grades of institutions and through a strict observance of these functions and limitations.

The Commission was informed that several of the states in this country had made serious errors in the organization of their educational systems by allowing unwarranted duplication to arise when local or political considerations have over-ridden logical planning. They therefore made a careful study of the farm schools (where such schools existed) in all of the states visited. Following is a description of the farm schools of Montana, Minnesota, Wisconsin, New York, and California:

MONTANA.

As originally organized under the state constitution in 1893, there were four separate institutions of higher learning in Montana widely

separated from each other in location. These were the State University at Missoula, the State College (Land Grant College) at Bozeman, the State School of Mines at Butte, and the State Normal School at Dillon. In 1913 the four colleges were combined by legislative action and declared to be one institution, the University of Montana.

The School of Agriculture at Bozeman, the only institution in the state offering a complete course of agricultural instruction of secondary grade, is connected with the State College of Agriculture and Mechanic Arts at the same place. The course extends through three years of six months each (eighteen months of actual instruction) and classes are held only in the winter months when farm workers are more easily spared from their usual labors. For admission to the school students must have passed the eighth grade of grammar school or must give satisfactory evidence to the principal of their ability to carry the prescribed courses. Persons 21 years of age or over may be admitted to the school without having completed the eighth grade provided they have had some practical experience in farm work and possess some common school education. There were 103 students registered for instruction in the school at the opening of the 1922-1923 school year. In 1921-1922 there were 173 students, and in 1920-1921 there were 126 students. (One woman student was included in the enrollment figures for 1921-1922.) Students who complete the course with satisfactory grades are given certificates of graduation. The courses offered are intended to prepare students for practical farm operation rather than for entrance to college.

The plant and apparatus at the disposal of the school are the same as that used by the College of Agriculture. The college grounds and farm contain 455 acres. Ninety-five acres of this land constitutes the college campus and 360 acres are used for farming and experiment station purposes. The equipment includes a modern dairy, a complete poultry plant, model farm buildings and barns, herds of purebred live stock, orchards, greenhouses, grain, soil, biological, chemical, and physical laboratories, wood and iron-working shops, and a selected group of farm implements, tractors, and gas engines.

Courses are offered in the usual agricultural and allied subjects and in addition instruction is given in English and in military science. The main subdivisions of the school curriculum are agricultural engineering, agronomy, animal husbandry, dairy husbandry, entomology and zoology, horticulture, poultry husbandry, and veterinary science.

Bozeman, the seat of the College of Agriculture, where the courses in the school of agriculture are given, is in the center of a very rich farming area.

Agricultural educators and state officials in the State of Montana are not in favor of expanding the present School of Agriculture nor of creating new schools of this type. Their present policy is to broaden the courses of study in the regular high schools of the state to include instruction in agriculture and home economics, and they claim that very effective work is now being done in this way. One or more trained agricultural teachers are added to the teaching staff of the high school and work is continued throughout the year, both in the classroom and on experimental plots on the home farms of the pupils. In some cases

Agricultural Hall, Oregon Agricultural College.

the State College of Agriculture is cooperating in this work by supplying teaching aid.

According to the authorities in this state the teaching of agriculture in the regular high schools will accomplish all that might be accomplished by separate agricultural schools. They believe that by this method more people will be reached, standards of instruction will be maintained, and state expenses will be reduced. Their experience thus far has partially supported this belief.

MINNESOTA.

Secondary schools of agriculture in this state are an integral part of the Department of Agriculture of the University of Minnesota and are administered by the university authorities. There are three such schools, the Central School located at the seat of the university, St. Paul, the Northwest School at Crookston, and the West Central School at Morris. Each school has its own separate faculty and is not dependent upon the State College of Agriculture for teaching aid. The schools are co-educational. The total enrollment in all schools by decades since 1901 has been as follows: 1901, 450; 1911, 879; 1921, 955.

The Central School of Agriculture located at the University Farm, St. Paul, is the oldest of the three schools. It was established in 1888. The school does not possess any land but is allowed restricted use of the land of the University Experiment Station including more than 400 acres. All of the mechanical equipment and the live stock of the College of Agriculture is used in the work of the Central School of Agriculture.

The Northwest School of Agriculture at Crookston in the Red River Valley opened in 1906. A second school of agriculture was deemed necessary at this time for two reasons:

1. The distance of the Central School from the northern part of the state. Many possible students were barred from attendance by reason of their inability to expend the time or money necessary to take the course offered at St. Paul.

2. Agricultural conditions in the Red River Valley, in many respects, differ radically from conditions in the southern part of Minnesota, and a school devoting its attention to and operating under local conditions was thought desirable.

There is an experiment station directed by the Department of Agriculture of the University of Minnesota in connection with this school. The farm, consisting of 476 acres, is fully equipped with stock and machinery.

The West Central School of Agriculture was established in 1910 as a part of the Department of Agriculture of the University of Minnesota. It is located at Morris in the western part of the state, and its students are all drawn from that section, a predominantly agricultural area. The school farm comprises approximately 400 acres. The physical plant is adequate and ample opportunity to work with live stock and mechanical farm equipment is afforded students. This school and the Northwest School, functioning as branches of the Minnesota Agricultural Experiment Station, carry on experimental research and farm extension work.

Horticulture, Agronomy, Agricultural Engineering, University of Wisconsin.

The requirements for entrance, the curricula, and the graduation requirements of all three schools are similar and in this respect they may be treated as one. The only scholastic qualification for entrance is a grammar school education or its equivalent in practical experience. The curriculum for boys includes training in all branches of agriculture and in associated subjects. The courses include general farming, live stock production, crop production and farm mechanics. For girls the schools offer courses in home economics.

The schools of agriculture are in session six months of the year but the curricula offer a program for the full twelve months, including six months of theory and six months of farm practice. The theoretical work in class and laboratory is given during the six winter months. The farm practice consists of supervised work on a farm (usually the home farm since the large majority of the students at these schools are farm boys) during the six summer months. Graduation requirements include attendance at three winter sessions of six months each, the completion of two summers of supervised farm work, and the attainment of satisfactory grades in the required and the elective work offered, in the course selected.

Under certain conditions work taken in these schools may be used in meeting college entrance requirements, but in all cases of this kind additional preparation is necessary. As a general rule the schools are not designed to prepare students for college. Their field of service lies with farm boys who can only attend school during the winter months; with city boys who desire to become farmers, and who need practical preparation; and with older boys who, because of their age, do not wish to attend the regular high schools.

The educational authorities of the State of Minnesota believe in these schools as institutions which are likely to return boys to the land with greater certainty and less expense than junior colleges or universities. The farm school at the University of Minnesota is probably the least successful in this regard and it is certainly the least popular. Its association with the university has caused confusion, dissatisfaction, and considerable discredit to the Department of Agriculture of the University, from which it cannot be dissociated in the popular mind.

WISCONSIN.

Secondary school instruction in agriculture in the State of Wisconsin is provided by six county agricultural schools and by the Short Course in Agriculture offered by the College of Agriculture of the University of Wisconsin. County schools are located at Marinette, Marinette County; Rochester, Racine County; Wisconsin Rapids, Wood County; Menominee, Dunn County; Onalaska, La Crosse County; and Waunatosa, Milwaukee County. The Short Course in Agriculture is given at Madison, the seat of the state university.

When first organized the county school of agriculture offered only two years of instruction designed for graduates of the grade or grammar schools. Three of the schools, the Dunn, La Crosse, and Milwaukee County schools now have both two and four-year courses. When the latter three schools are inspected by representatives of the University of Wisconsin, they may be declared, under certain circumstances,

accredited high schools of the state. Students graduating from the four-year course in agriculture are then allowed to enter the university on the same basis as graduates of the regular high schools, that is upon presenting evidence of having satisfactorily completed eleven units of academic work and four or more units of vocational work, and of having complied with other entrance requirements of the university. Students who complete only the two-year course in the county schools, and who later decide that they wish to attend the university, must go to some high school and complete their four years of work.

The University of Wisconsin has no direct control over the administration of the county schools of agriculture. They are under the direction of the State Superintendent of Public Instruction. It is true that the law authorizing these schools states that the Dean of the College of Agriculture of the University of Wisconsin shall aid in their location and in arranging their courses of study. This latter part of the law has never been observed.

The short course in agriculture at the College of Agriculture of the University of Wisconsin was established in 1886. Instruction is given by the regular members of the teaching staff of the college. The equipment of the college, including four experimental farms embracing 746 acres, is used in the work. The full course consists of two terms of fifteen weeks each and each term is divided into three sections of five weeks each. Students may enter the school at the beginning of any five-week period as the course is so planned that a definite unit of work is completed every five weeks. The school opens in November, closes for the Christmas holidays, begins the second five-week period in January, the third in February, and closes in the middle of March. Students already employed on farms may thus finish the harvest work, attend the school, and return to the farm in time for the spring planting operations.

No entrance examinations are required for admission to the short course. Students are generally at least 16 years old and possessed of a common school education. Persons who have not finished the grade schools, but who are fitted for the work by reason of their age and experience, may be admitted to the course by special permission. There were 251 students enrolled for the 1921-1922 school year. Certificates of graduation are granted to those who successfully complete the prescribed course of study.

The courses of instruction cover the general field of agricultural science and practice. Work is given in agronomy, animal husbandry, dairying, horticulture, poultry husbandry, agricultural economics, agricultural engineering, and in the fundamental sciences underlying agricultural practice. The purpose of the short course in agriculture given by the College of Agriculture of the University of Wisconsin is briefly:

1. To give a thorough training in practical agriculture and such instruction in the sciences upon which agriculture is based as may be necessary for intelligent cultivation of the land and breeding of stock.

2. To create an interest in rural life and to awaken in the student a realization of the place of the farmer in the community and in society in general.

It is not a preparatory school leading to work of collegiate grade and only a few of its students have later pursued advanced studies in agriculture. The school is not connected with the University of Wisconsin, administratively or otherwise, but only with the College of Agriculture of that institution.

NEW YORK.

Considerable thought has been given to the problem of the farm school in the State of New York. Schools similar in aim and in methods of instruction to those in the states of Montana, Minnesota, and Wisconsin (described above) have long been in operation. Their effectiveness is still a subject of controversy and there is no need to discuss them further at this point.

More recently a somewhat different type of agricultural school has been placed on trial in this state and although it is still too early to judge the success of the experiment, it has achieved certain things which indicate that its methods may be studied with profit. Two distinctive features differentiate this school from the ordinary farm school previously considered.

1. The school year takes in the full twelve months in place of the six or eight months sessions of the older agricultural schools.

2. All of the work of the farm is done by students, supervised by instructors, instead of by hired farm laborers. Students are not paid for their work.

Combined with all study of the theory of agriculture and its underlying sciences, there is a maximum of actual field work. The student follows the complete cycle of husbandry in every branch by contemporary work in the field and classroom. The theory that the school farm can be made to pay for itself is abandoned and profit is subordinated to the more complete use of the farm plant by the students. This type of school is in effect a trade school in agriculture, the main purpose of which is to make students familiar with and skillful in all kinds of farm work. It tries to do for the student what the apprentice system and the city trade schools aim to do for the training of mechanics and artisans.

In order to gain first hand knowledge of this type of school the commission visited the New York State Institute of Applied Agriculture at Farmingdale, Long Island. Farmingdale is a small town approximately 32 miles distant from New York City, from which the school draws 95 per cent of its enrollment. The establishment of the Institute of Applied Agriculture was authorized by an act of the New York state legislature in 1912, and the school was formally opened in March, 1916. The farm area owned is 333 acres in extent and of this land 100 acres are under cultivation. The remainder is rapidly being cleared of brush and wild growth by the students of the school. Eventually it is planned to acquire an additional 300 acres and to increase the physical plant so that 1000 students may be given instruction. Approximately 25 per cent of the buildings, which are ultimately expected to be available, are now completed and in use. The demands for instruction have steadily exceeded the capacity of the school. At present only the course in agriculture is given. When the school is completed, a

course in home economics for girls will be offered, combining theoretical instruction with actual work in the school dormitories and dining hall.

The courses of instruction are open to men and women on equal terms. The regular course includes three full years of work. Students intending to take this course must complete one full year of regular high school work prior to their entrance into the farm school. Persons, who by reason of their age and experience may be classed as special students, may be admitted to the institute without previous high school training and they are then allowed to take special courses made up of subjects selected from the regular work of the school. Instruction is given in agronomy, animal husbandry, farm mechanics, horticulture, poultry husbandry, the agricultural sciences, and to a limited extent in English, farm arithmetic, civics, and economics. Before receiving a diploma or certificate of graduation the student is required to complete, with passing grades, three years of work in class, laboratory, and field. In addition to its regular instruction work the institute publishes bulletins on agricultural subjects, conducts short courses for farmers, and to a limited extent carries on agricultural extension work.

Here then is a different theory of agricultural education which may very possibly apply to conditions in other states than New York. The work of the institute is planned to provide instruction not only for the farmer boy or girl who may reasonably be supposed to have already acquired practical experience in following the plow, but also for those boys and girls who desire to become farmers but who have had little or no agricultural experience. There is a maximum of actual field work and laboratory practice and a minimum of classroom study of the science of agriculture. Following the theory further, the graduate of the institute is supposed to be fully equipped for a successful career as a farmer, and not merely a graduate compelled to seek opportunity for practical experience before advancing to a position of independence as a farm owner or manager. The success or failure of this theory of education is yet to be determined.

CALIFORNIA.

In California two types of the same general class of farm schools have been tried and the success and failure of their methods has been generally discussed. The University Farm School at Davis (now the non-degree course at the branch of the College of Agriculture at Davis) has offered general agricultural instruction to high school graduates and to anyone over 18 years of age having the equivalent of a grammar school education. The California Polytechnic School at San Luis Obispo is a state school for vocational training, particularly in agriculture, for any boy or girl 15 years of age or over who has the mental capacity required to do the work offered. A brief outline of the equipment, entrance requirements, course of study, and graduation requirements of these two schools follows:

University Farm School.

(Non-Degree Course of the College of Agriculture.)

The University Farm at Davis, Yolo County, was purchased under authority granted by an act of the state legislature in 1905, the significant portion of which is: "The said university farm when pur-

chased as aforesaid shall be immediately given into the possession of, and shall be under the management, direction and control of the Board of Regents of the University of California. Immediately upon obtaining possession of said university farm said regents shall proceed to have constructed thereon buildings and such other structures as shall be necessary for an agricultural school, and for the use thereof for purposes of education in agriculture. They shall provide for the purchase of implements, machines and apparatus, the planting of trees and vines, and forage and agricultural crops, for the purchase of domestic live stock, and for the employment of laborers. They shall appoint the necessary instructors and inaugurate and provide for the conduct of instruction in agriculture, and in such other branches of learning as are allied thereto, and as are calculated to better qualify and inform the students attending in the theory and practice of agriculture. *This instruction shall be conducted in connection with, and as a part of the College of Agriculture of the University of California, provisions being made by the regents for such attendance on the farm of the college students as may be deemed best and necessary to the completion of their college courses.* The University Farm, and the instruction given thereon, shall be so conducted as to meet the needs of persons who desire instruction in agriculture, horticulture, viticulture, animal husbandry, dairying, irrigation and poultry raising, and to prepare them for the pursuit thereof; and shall also be used for experimental and investigational work in connection with the agricultural experiment station at the University of California. Short courses of instruction shall also be arranged for in each of the leading branches of agricultural industry, so regulated as to provide for popular attendance and general instruction in agricultural practice." The original purchase consisted of 780 acres of valley farm land. This acreage has recently been increased by the leasing of 300 acres of adjoining property. Davis is in the lower Sacramento Valley and climatic and soil conditions there are broadly typical of conditions in the great interior valleys of California.

The following table shows the present estimated value of land, buildings, improvements, equipment and live stock at the University Farm as of June 30, 1921; also total expenditures during the past four years. These data are presented as having a possible bearing on the cost of organizing and maintaining a southern farm school.

TOTAL EXPENDITURES.

Furnishings -----				23,880 48
Live stock -----				79,704 50
Total -----				\$792,378 70

*Estimated.

The teaching staff of the Branch of the College of Agriculture at Davis is largely common to both degree and non-degree students. Likewise the equipment of the college, including buildings, machinery and live stock is used by non-degree students. Buildings are provided for classroom and laboratory work in the various subjects in which instruction is offered and in addition there are modern barns for live stock, shops for agricultural engineering work, and sheds for flocks of poultry. Herds or specimens of the more important breeds of the various classes of live stock are maintained on the farm and used in non-degree course work. A large acreage devoted to field crop investigations, a commercial orchard and vineyard, and a small vegetable acreage are also available for field instruction.

The non-degree courses now offered by the Branch of the College of Agriculture at Davis include a three-year course for anyone 18 years of age or older who has the equivalent of a grammar school education; a two-year course for high school graduates; and a one-year course for those who cannot spend more time in educational preparation for their life work. The non-degree courses are not preparatory to work in the University of California nor do they yield credit toward a bachelor's degree.

The course is practical in a broad sense, a large part of the work being done in the laboratory, shop, and field. Major work is offered in animal husbandry, dairy industry, horticulture, and poultry husbandry. All of the major work offered in any one of these courses may be completed in one year but if a student wishes to obtain a certificate of graduation he must complete at least two years of work. Within these major subjects instruction is also offered in agricultural engineering, agronomy, farm management and practice, olericulture and rural economics, as well as in English, mathematics, hygiene, and physical education. Satisfactory completion of the prescribed work during the school terms and at least three months of supervised work on a commercially operated farm are required for graduation.

It is not possible to determine accurately the number of different individuals who have received instruction at the University Farm since the fall of 1908. The following table indicates that over 5000 persons have been enrolled aside from University students, of which about 2000 were Farm School students and 3000 short course students:

Year	New Students	Short Course	Visitors	Teachers training	Total
1908-9	18	109	—	—	127
1909-10	30	63	—	—	93
1910-11	50	123	—	—	173
1911-12	55	163	—	—	218
1912-13	75	187	—	—	262
1913-14	117	134	1	—	252
1914-15	189	185	—	—	374
1915-16	169	181	17	—	367
1916-17	162	233	23	—	418
1917-18	126	314	21	28	489
1918-19	129	289	35	104	557
1919-20	359	492	14	100	965
1920-21	284	339	12	—	635
1921-22	226	294	15	—	535
1929		3106	138	232	5465

Of this number 399 graduated. A questionnaire was sent to each of these graduates in December, 1921, to which 184 replies were received. These showed the following occupations:

Farming -----	113
Managers of farms -----	12
Working on farms -----	4
Connected with agricultural industries -----	13
College teachers, scientific workers, etc. -----	12
Not connected with agriculture -----	14
Taking further work mainly in agricultural colleges -----	5
No occupations stated -----	11
Deceased -----	1

California Polytechnic School.

The California Polytechnic School is a state school for vocational training in agriculture, mechanical arts, and domestic science. It is administered by the State Board of Education and is in no way connected with the University of California. The school site is about one mile from the town of San Luis Obispo. The farm lands owned by the school cover 936 acres, 450 of which are tillable, the remainder being rolling hill land and mountain pasture. The principal cereals and field crops, and certain orchard fruits are grown on the farm. It is well equipped with modern machinery and herds of the better known breeds of live stock are now being built up.

The school is a special school intended to meet the educational needs of boys and girls who will probably have to complete their school education when or before they are 17 years old. It is not intended to compete with any high school in the state. The work given does not correspond to that given in the regular high schools and is not usually accepted for entrance to the University. Any boy or girl fifteen years of age or over who is proved capable, by test, of doing the prescribed work is admitted. No elementary or high school graduation certificate is required to secure admission. The agricultural courses offered are generally more practical than theoretical and vocational guidance in actual field work is stressed rather than the science and theory of agriculture. The major courses for boys are two in number. The one dealing with agriculture is entitled General Farm Practice. It covers the field of agronomy, animal husbandry, horticulture, dairying, poultry husbandry, and certain subjects known as related work including English, mathematics, history, physical education, and general sciences upon which modern agriculture is based. The second major course for boys is a course in engineering and mechanics and for girls there is a course in household arts. The regular course in all major subjects is four years in length and the successful completion of all of the prescribed work is required for graduation. Intensive training for shorter periods is given those who can not take the four year course.

While not strictly in accord with the purpose of the school, it has been deemed wise to include in its curriculum a course which definitely prepares students for work in the University and in teachers colleges. No detailed program of study is framed for students taking this course, a special program being arranged for each individual. The California Polytechnic School is accredited by the University of California.

Beef Cattle Barn, Purdue University.

CONCLUSIONS OF THE COMMISSION.

As a result of its study of the farm school problem, the scope of which has been outlined above, the commission has arrived at certain definite conclusions which may be briefly summarized as follows:

1. The educational service of the farm school occupies a narrow field of usefulness between the Smith-Hughes work in the high schools and the collegiate instruction in the University, but within this field is of considerable importance.

2. The farm school should be a vocational training school of secondary grade, teaching relatively immature persons the practical handicrafts and the well established principles of agriculture and homemaking, with a minimum of general cultural courses. It should prepare young people for farming and homemaking by the shortest route. It should emphasize the practical and, only in a very limited degree, teach the scientific and theoretical aspects of agriculture.

3. The farm schools should be primarily finishing schools, not college preparatory schools. To become the latter denies the premise upon which they were established. To care for the student who, in the farm school, discovers his "career" and wishes further education, some correlation with the University should be effected, so that certain work would be accepted for matriculation and the balance of the requirements met through examinations.

4. The farm school should not conduct research work of any kind. This can be done only by highly trained specialists, a class of men not needed to impart established knowledge to young people of high school age. It is also very expensive and requires special facilities.

5. The farm school should do no extension work. Extension work deals with mature farmers and brings to them methods based on knowledge of recent and often incomplete research. This type of service cannot be given advantageously by those who have been chosen primarily for their ability to teach the immature. Reliable extension teaching, which will keep ahead of the demands of the farmers for exact information, can only be done by extension workers who are in close touch with specialized teaching and investigation departments such as exist in the college of agriculture.

6. The farm school should not admit the student over 21 years of age who has discovered too late the need of an education. This student should improve his preparation and enter the University as a special student or should take short course work in the line of his special interest. Experience has shown that the mixing of mature and immature students of varying degrees of preparation and ability is disastrous to the effectiveness of a teaching institution. The type of short course offered at the University of Wisconsin seems to this Commission to meet admirably the need of the student who fits neither in the high school, the farm school, or the college of agriculture.

7. The farm school, being a part of the secondary school system, should be under the State Board of Education. This body should insure its rendering its particular service and keep it in proper adjustment with the other units of the school system.

8. The need for farm schools is limited. It is the opinion of the Commission that this need in California would be fully met at the present time by the careful, efficient and attractive development of the California Polytechnic School at San Luis Obispo, to which might be transferred all the non-degree work now given at Davis except the

CHAPTER III.

UNIVERSITIES AND COLLEGES.

During the Civil War President Abraham Lincoln signed the act of Congress of July 2, 1862, known as the first Morrill Act, under which there was granted to each state 30,000 acres of the public domain for each senator and representative; this land to be sold and the proceeds invested so as to bear interest at not less than 5 per cent, except for one-tenth of the total, which might be used for the purchase of sites for the college and experimental farms. The interest was to be used for the endowment, support and maintenance of at least one college where the leading object should be to teach such branches of learning as are related to agriculture and the mechanic arts in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life. Under this act have been established most of the colleges of agriculture, and out of some of these have grown the great state universities which are such a notable feature of our American educational system.

The first institution to receive a grant under the Morrill Act was Iowa State College of Agriculture and Mechanic Arts, which accepted the federal gift on September 11, 1862. This was rapidly followed by Kansas State Agricultural College on February 16, 1863, and Michigan Agricultural College on February 25, 1863. There are now fifty-three land grant colleges, of which the oldest is Rutgers College, New Jersey, founded in 1766, which is a private corporation. The oldest state institution to benefit by the act is the University of Tennessee, established in 1794. The oldest independent state college of agriculture and the mechanic arts is Michigan Agricultural College, established in 1855.

Of the states receiving income under the act, Kentucky, Mississippi, South Carolina, Virginia, and Massachusetts divide the fund between two institutions. The others maintain one college or university to which it goes as a whole. Nineteen states have erected and maintain independent colleges of agriculture and the mechanic arts, while also maintaining state universities; twenty-eight states have but one institution. Massachusetts has no state university and divides the fund between Massachusetts Agricultural College, a state institution, and Massachusetts Institute of Technology, a private foundation. In Montana the agricultural college has a separate name and management, but is by law one of the component parts of the state university, which includes all the state-supported institutions of higher learning.

In California the first attempt to take advantage of the Morrill Act was made in 1866 when the legislature created the "Agricultural, Mining, and Mechanical Arts College," and provided for the purchase of a farm of not less than 160 acres of land. This institution never got beyond the stage of preliminary organization, during which it was affiliated with the College of California, which had opened in 1860, to form the University of California. This institution was created by an "organic act" passed by the legislature March 23, 1868, on which date it also received a land grant fund under the Morrill Act.

Organization of agricultural instruction and research in the University began with the election of a "professor of agriculture, chemistry, agricultural and applied chemistry and horticulture" in 1869.

In 1874 the first agricultural buildings were erected—a barn 36x44 feet, a tool house 64x12 feet, two propagating houses; and a number of sheds, outbuildings, hot-beds and cold frames, and shortly thereafter one of the main buildings of the University, afterwards known as South Hall, was erected to house the college of agriculture, which it did in a portion of the basement. Permanent buildings for the college of agriculture were provided on the Hearst architectural plan, and the first of these, Agriculture Hall, was completed in 1912 at a cost of \$200,000. The second, Hilgard Hall, was built in 1917 at a cost of about \$375,000. Between the barns of 1874 and the great buildings of recent date the college of agriculture has gathered unto itself most of the old structures on the campus as their former occupants left for better accommodations or other parts.

The University of California College of Agriculture began as did all its fellows with encyclopedic instruction, but it soon passed from this to the scientific method and in so doing exerting a marked influence on similar institutions elsewhere. Continually since that time California has led the field in the promotion of the scientific point of view and the application of scientific research; but it has followed, sometimes, at a considerable distance, in equipment for instruction and investigation in practical lines. The college has always stood against the inclusion of enforced manual labor in the curriculum, a principle the commission has now found to be accepted all over the country. Another fundamental idea of the college has been that the requirements for admission and graduation in agriculture should be as high as in any other technical college.

Agricultural instruction for some decades was conducted by lecture and classroom methods almost exclusively, and the farmers of the state began to complain that they had a college but no farm and no opportunity for instruction by actual demonstration. This was remedied in some measure through practice courses in the field and various other devices, but agitation was continuous for a real farm. This agitation was often underlaid by separatist schemes and selfish desires to move the college to one location and another, and under such circumstances made little headway with the majority of the farmers, who always contended for building up agricultural research and instruction in the university and not apart from it. Finally, however, a broad and rational proposition was presented to the legislature of 1905 and resulted in the establishment of the University Farm at Davis. This farm was welcomed into the University, and academic ideas broadened to include its functions. The influence of the University Farm has been powerful in developing the college of agriculture and advancing it in public esteem, and has until very recently quieted the separatist movement which is the curse the Morrill Act has laid on so many state universities.

The fact that the Morrill Act was so drawn as to make its benefits available either to a university or to a college carrying on work only in the specific fields mentioned by the act has created a situation which is one of the most fruitful sources of contention in American agricultural circles. Twenty-eight states have chosen to have a single institution, nineteen two separate and independent institutions, and

Woman's Building, Agricultural College, University of Illinois.

in all forty-seven the battle has raged intermittently to change the *status quo*. This complication and the strong partisanship manifested by those who know one or the other type of institution was probably responsible, more than any other single factor, for the appointment of this commission. While the act of the legislature gives it a broad field of duties covering all of agricultural education, the specific problem which it was expected to study and report on was the advantages and disadvantages of the separate college of agriculture as against the college of agriculture which is an integral part of a great state university.

To better fit the commission to reach a judgment on this important matter the act directed that the commissioners should visit agricultural colleges and study their organization and accomplishments. In accordance with this direction a visit of from one to two days and a careful survey was made of each of the following: Oregon Agricultural College, Corvallis; Montana Agricultural College, Bozeman; University of Minnesota, Minneapolis; University of Wisconsin, Madison; University of Illinois, Urbana; Purdue University, Lafayette, Indiana; Iowa State College, Ames; Ontario Agricultural College, Guelph, Canada; Cornell University, Ithaca, New York; Massachusetts Agricultural College, Amherst. These particular institutions were chosen for a variety of reasons, but chiefly to give a wide range of types from which fairly general conclusions might be drawn. Oregon Agricultural College is separate from the State University of Oregon, but is more a "vocational university" than a purely agricultural college, including as it does commerce, engineering, mining, home economics, pharmacy, and music. Montana Agricultural College is an example of a college separated geographically but united administratively with a university, the University of Montana being a paper university with colleges situated at Missoula, Butte, Bozeman, and Dillon, all under a super-president who is known as a chancellor. The University of Minnesota exhibits a Siamese twin relationship between the agricultural college and the other parts of the institution. The campus of the college is thirteen minutes by street car from the campus of the university proper, and there is a rather definite administrative demarcation between the two institutions, although they are under the same president and regents. Another factor which interested us in Minnesota was that the agricultural college is there the head of the system of special agricultural education for the state, directing the vocational farm schools in various localities as well as a farm school on the college campus. The University of Wisconsin is probably the finest example of a state institution including a college of agriculture administratively, geographically, and spiritually welded into the whole as an integral part. Moreover, the agricultural work of the University of Wisconsin has been so conspicuously successful that no survey could be considered in any way complete which did not include it. Purdue University is properly the college of applied science of the State of Indiana, including schools of agriculture, engineering, science, and home economics. The other types of university work are at the University of Indiana at Bloomington, from which Purdue is entirely separate. The University of Illinois, which includes a college of agriculture on its campus and

directly under its control, is one of the very large state universities whose problem of numbers is similar to that of California. Iowa State College at Ames is a separate institution of agriculture and the mechanic arts whose praises have been sung in farmer circles all over the country and particularly in our own state. Ontario Agricultural College, at Guelph, Canada, is a vocational school whose graduates receive their degrees through the University of Toronto, with which, however, it does not seem to have any other connection. It was thought to be of interest as a well known and reasonably successful school developed under different traditions and environment from the colleges of the United States. Cornell University is a private endowed institution to which the State of New York has entrusted in major part its educational function in agriculture and veterinary science. The college of agriculture is an integral part of the university in every way except that its property, buildings, and equipment are kept legally apart although on one campus. The control of both college and university is in one board of trustees and its direction in the president of the university. This is the only example in the United States of a combination of agricultural education with an endowed institution for the advancement of general culture. Massachusetts Agricultural College is probably the only collegiate institution in America confining its instruction practically to agriculture alone, excluding the so-called mechanic arts. It is neither part of a university nor is it conducting a university under another name. In addition to the colleges and universities listed above, the commission held conferences while in the east with President Butterick, of the General Education Board, President Pritchett, of the Carnegie Foundation, and Dr. A. C. True, Director of the States Relations Service of the United States Department of Agriculture.

At each institution the commission followed the outline set forth below in its quest for information. It was not possible at every institution to develop all the points covered by this outline, but the following interesting data was discovered by conference with the faculty, administrative officers, students, and successful farmers of the state:

1. Composition of Governing Board:

- (a) Number?
- (b) How appointed?
- (c) Relations to college of agriculture?
 - 1. Are they or any part of them actively interested in the problems and management of the college?
- (d) Do they receive compensation and if so, how much?
- (e) Occupations; if retired, former occupations.

2. Facilities and physical equipment.

- (a) Amount of farming land and location of college with reference to it.
- (b) Have you any lands at a distance from the campus, used for regular class instruction?

- (c) How many dairy cattle?
 - stock cattle?
 - sheep?
 - swine?
 - horses?
 - poultry?
 - other stock?
- (d) Number of buildings and character of same.
- (e) What is the total annual appropriation for maintenance of the college of agriculture?
- (f) In your opinion, can a first class agricultural college be maintained without plenty of stock for practical demonstration without plenty of land?

3. Student Body.

- (a) Number of university students.
- (b) Number of agricultural degree students.
- (c) What percentage of the high school graduates of the state enter your college?
- (d) What percentage of your students come from the farm?
- (e) What percentage go to other agricultural institutions in the state? Outside the state?
- (f) What was the number of your agricultural graduates in 1921?
- (g) Graduate students in 1921?
- (h) What percentage of your graduates take up farming?
- (i) What percentage become agricultural experts and leaders?
- (j) What percentage of your students work to pay part or all of their expenses?
- (k) What percentage of your graduates have financial backing to start farming after graduation?
- (l) Can you suggest the names of some of your graduates in the vicinity who may be interviewed?

4. Faculty and Administration.

- (a) Organization of faculty.
 - (1) Is this established by law?
- (b) Administrative organization of college of agriculture.
 - (1) Powers and duties of deans and other administrative officers.
- (c) Relation of college of agriculture to other colleges.
 - (1) Is it under a separate faculty?
 - (2) What degree of autonomy has it?
 - (3) What power has general faculty body over the affairs of the college?
- (d) What relations govern the activities of professors or instructors with regard to teaching, research and outside activities?
- (e) What are the minimum, maximum and average salaries paid in different faculty grades?
 - (1) Are they the same as in other departments of the university?
- (f) Is there any distinction made between members of the college of agriculture, the agricultural extension service, and the experiment station?

5. Curriculum and standards.

- (a) What are your standards of admission?
 - (1) Do you admit freely and select later, or do you attempt to make selection before entrance?
 - (2) Do you admit special students who are deficient in matriculation requirements and permit them to remedy deficiencies during their college course?
- (b) What are your major divisions?
 - (1) What is included under each of those heads?
- (c) To what extent is your instruction practical in each division?
- (d) What courses not given in the agricultural college are required of agricultural students and what courses are elected by large numbers of such students?
- (e) Are any farm schools (schools for vocational or non-degree students) maintained in connection with the college?
 - (1) Where are they located?
 - (2) Are they under the direction of the college faculty?
 - (3) Are the faculties of the college and the farm school separate?
 - (4) Number of students?
 - (5) Length of course?
 - (6) What is the type of training given farm school students?
 - (7) Are the courses in these schools intended for students between the ages of fourteen and eighteen, or are they intended for students who have reached the college age, but do not have the requirements for admission to college?
 - (8) Are the courses preparatory to college courses or entirely vocational?
 - a. If college preparatory, are they accepted at par in transferring from farm school to the college?
- (f) Are there any junior colleges in your state giving instruction in agriculture?
 - (1) What farm land is available to each of these colleges?
 - (2) How much live stock?
 - (3) What building and laboratory facilities?
- (g) Extension service.
 - (1) Organization?
 - (2) Staff?
 - (3) Cost?
 - (4) What proportion of this money is spent in field—in office?
 - (5) How much public service, such as organizing farmers, et cetera?
 - (6) Do members of the staff engaged in the extension work have academic titles and status?
 - (7) Do they have the same privileges as to vacations, sabbatical leaves and old age pensions as other members of the faculty?

- (h) What short courses in agriculture are given in your institution?
 - (1) What is the length of each?
 - (2) What was the attendance in 1921?
- (i) To what extent does the college of agriculture include in its curriculum mechanic arts, home economics and allied courses?
- (j) What is your policy with reference to research work and experimental stations?
 - (1) Do you undertake fundamental or specific problems?
 - (2) Is your work scattered in various localities throughout the state or centralized?
 - (3) Is the work of the experiment station organized on a project basis and if so, is money allotted to the project or to divisions and are reports required at regular intervals?
- (k) What is the character of your instruction and research in business and social problems of agriculture?
 - (1) Courses in cooperation and marketing?
 - (2) Courses in farm credits?
 - (3) Courses in problems of land tenure and land settlement?
- (l) What are your fundamental requirements for graduation?

Governing Boards.

The number of trustees varies from one at Guelph, where the Minister of Agriculture for the Province of Ontario stands alone between the college and the legislature, to forty-one at Cornell. Very generally appointments are made by the governor, the most notable exception being Illinois, where of the eleven trustees two are ex officio and the remaining nine elected by the people. At Cornell, which combines a state college with an endowed university, the governor of New York appoints five of the trustees, seven are ex officio, two are elected by the trustees, two are chosen by the alumni, one is the oldest living descendant of Ezra Cornell, and many other groups are represented. At Purdue three of the nine trustees are named by the alumni and six are appointed by the governor in accordance with a law which provides that two must represent agriculture, two industry, and two the general public.

Almost universally the trustees are keenly interested in the progress and success of the college, but leave to the faculty and administration the direction and conduct of its affairs. Even where the board is elaborately organized with councils or committees to deal with special matters, the business of these divisions is limited to aiding the dean of the college on matters of policy which he brings before them and does not extend to interference in the development and activities of the institution. At Purdue University and Iowa State College the trustees receive a small per diem, but in all other cases they are allowed only travelling expenses, and seldom collect these.

The occupations of the board members of the various institutions visited were most interesting, the unexpected fact being developed that in no case does a majority of the board consist of farmers or representatives of agriculture. For instance, such strongly agricultural insti-

tutions as Iowa State College at Ames and the University of Wisconsin have but one farmer on their boards. Moreover, at Ames the active management of the institution so far as the trustees are concerned rests with the finance committee of the board which consists of two newspapermen and a school man. Nor was the absence of strong numerical agricultural representation found objectionable in this or any other case. The general opinion was expressed by President Kerr of Oregon Agricultural College, who said, "The efficiency of a board of regents depends on the character of the men, not on their occupations. We have had farmers on our board who have been entirely unsatisfactory to the college, and men in other occupations who have earnestly promoted its best interests." Every institution visited and every person with whom the commission consulted stressed the importance of long terms and consequent freedom from political interference if a board of trustees was to be even measurably successful.

The following table exhibits in brief certain of the facts with reference to the membership of the managing boards of the institutions visited:

Institution	No. of trustees or regents	No. of farmers on board	No. of ex-officio members	No. ap- pointed by governor	Remarks
Oregon Agricultural College -----	13	3	4	9	Appointed with approval of State Senate
Montana Agricultural College -----	11	--	--	--	
University of Minnesota---	12	1	3	9	
University of Wisconsin---	13	1	2	11	1 from each congressional district, 2 from state at large
University of Illinois-----	11	1	2	0	Regents elected
Purdue University-----	9	2	0	6	3 appointed by alumni
Iowa State College-----	9	1	0	11	
Ontario Agricultural College -----	1	1	1	0	
Cornell University-----	41	0	0	5	
Massachusetts Agricultural College -----	18	0	4	14	
University of California---	24	3	8	16	2 appointed every other year. Term, 16 years.

Facilities and Physical Equipment.

The land holdings, physical equipment, stock, and buildings naturally varied greatly in the institutions visited, both on account of the differences in state wealth and the emphasis placed by the administration on one phase or another of agricultural education. But these variations were as nothing to the widely differing opinions expressed by educators of standing as to the amount of these things, particularly land, necessary for a successful college—one of the points in which the commission was most vitally interested. One extreme was represented by former Dean L. H. Bailey of Cornell, who has made a study of the College of Agriculture of the University of California and who advised the commission that with 100 acres for demonstration and instructional purposes at Berkeley, the University of California could equal any institution in the country and surpass any separate agricultural college. The other extreme is probably best represented by Iowa State College which with 1500 acres of tillable land believes that its work could be put on a much higher plane if it had twice that amount, some

of which would undoubtedly be used for raising crops and feed that could well be purchased. Most persons consulted seemed to be of the opinion that with about 200 acres, satisfactory work could be done.

Oregon Agricultural College now has about 300 acres of farm land of fair quality, adjacent to Corvallis, and opinion is strongly in favor of the acquisition of 1500 acres additional; not necessarily immediately connected with the campus. Certain areas are even now used for instructional purposes which are two miles from the college. On these lands the college maintains 150 head of dairy cattle, 51 head of stock, 195 head of sheep, 154 swine, 37 horses, 750 laying hens, 820 breeding hens, 3000 young poultry, and 15 head of angora goats.

The University of Minnesota has 422½ acres of farming land as part of its agricultural campus, which, with the buildings and equipment located thereon, is valued at \$2,500,000. Purdue University has about 700 acres of land within an hour's ride of the campus used for instructional purposes and also has 400 acres for experimental work. Of this 385 acres are allotted to animal husbandry, 280 acres to agronomy, 10 acres to horticulture, and 17 acres to poultry husbandry. The University of Wisconsin has 746 acres of tillable land on the campus and within a half hour's ride. The University of Illinois is located in the heart of the corn belt, and has almost a thousand acres available for instruction and research.

Iowa State College has a very complete physical equipment. In all, it owns over 1400 acres of land, of which 125 acres are in the campus proper, and the remainder in experiment station farms, orchards, gardens, and a forestry tract. Some forty buildings stand on the campus, including a remarkably fine animal husbandry laboratory which provides complete facilities for the killing, cutting, and curing of meats as conducted on the farm. There is a dairy herd of 100 pure-bred animals, and similar high quality representation of horses, sheep, beef cattle, swine, and poultry. The investment of the state in the college is approximately \$4,000,000.

Cornell University has 1300 acres of land in a poor farming section, a good deal of which is not tillable, and only 200 acres of which are used for instructional purposes. Massachusetts Agricultural College is situated on about 600 acres of poor farm land and has a demonstration forest of 1765 acres, six miles away. Of the educational experts who were interviewed in New York, Dr. Butterick of the General Education Board was of the opinion that 200 acres should be ample for instructional purposes at any agricultural college.

The University of California has its headquarters at Berkeley, where three acres of tillable land and 100 acres of pasturage are now available. Here are located the laboratories of agronomy, citriculture, entomology, forestry, fruit products, genetics, landscape gardening, plant nutrition, pomology, nutrition, plant pathology, and soil technology. The headquarters of agricultural education, agronomy, citriculture, entomology, forestry, farm management, genetics, landscape gardening, nutrition, plant nutrition, plant pathology, pomology, rural institutions, soil technology, veterinary science and viticulture, are also at Berkeley.

At Davis, sixty-five miles from Berkeley, is the university farm of almost 1100 acres; 780 acres owned by the University and 300 acres

under lease. Here are numerous buildings for the various phases of agriculture and horticulture, two stock judging pavilions, agricultural engineering shops, a gymnasium, dormitories and a dining hall, as well as barns and sheds for horses, dairy and beef cattle, sheep, milk goats, swine and poultry. The more important breeds of the various classes of farm animals are present for use in class work. A large well-equipped poultry farm is stocked with several thousand fowl of a number of leading varieties. There are over 150 acres of orchards and vineyards on the farm and ample areas for growing vegetables and field crops. The farm has a modern system of irrigation, being under both a pump and gravity sytem. The headquarters of the following divisions are at Davis: agricultural engineering, animal husbandry, dairy industry, irrigation practice, olericulture, and poultry husbandry. In addition, the divisions of agricultural education, agronomy, entomology, genetics, pomology, rural institutions, soil technology, viticulture and fruit products offer courses.

The Graduate School of Tropical Agriculture and Citrus Experiment Station is located on 477 acres near Riverside, in the center of the citrus region. Ample laboratory facilities are available, and the station is convenient to all the tropical and subtropical fruit industries.

Faculty and Administration.

During the past few years certain unfortunate differences have developed at the University of California between the College of Agriculture and the Academic Senate of the University, which is a legislative body consisting of all persons of the rank of instructor or above engaged in resident instruction. This body since 1920 has tended to take on administrative as well as legislative functions, has excluded from its membership a portion of the faculty of the College of Agriculture on the ground that they were not engaged in resident instruction, and has set up as the basis for selection and advancement of persons in academic life the Doctor of Philosophy degree, or its equivalent. Because of these and similar happenings and the friction caused by them, the College of Agriculture has come to look upon the Academic Senate as an unfriendly body whose continued power in its present form will be prejudicial, not only to the aims and purposes, but to the very existence of the college. One part of the commission's investigation was to determine the freedom of the College of Agriculture at the University of California as compared with similar colleges elsewhere, both in and out of universities.

At Oregon Agricultural College the president has great power and is the center of faculty organization. There is an academic council consisting of all deans and heads of departments which exercises certain functions in connection with the curriculum of agriculture as well as the other branches of the institution, but since the members of this council are all appointed by the president, have the powers which he gives them, and serve at his pleasure, it is obvious that the body is purely advisory. No distinction is made between the members of the college of agriculture, the experiment station, and the extension service, except that farm advisors or county agents in the latter service are not given academic status, titles, or privileges. Faculty members at Corvallis generally carry on both instruction and research. They are not allowed to accept compensation for outside work.

The college of agriculture at the University of Minnesota consists of:

1. The college proper,
2. Farm schools throughout the state,
3. Short courses,
4. Extension service,
5. Experiment station.

This group is administered by the dean of the college of agriculture who reports directly to the president of the university, who has an absolute veto on his recommendations. The faculties of other colleges of the university have no authority in connection with the college of agriculture except where courses in those colleges constitute part of the agricultural curriculum. This statement does not apply to the graduate school which is divided into seven groups, not colleges, one of which is agriculture. The faculty of the graduate school is elected by the whole faculty of the university and this applies to the agricultural group as well as all others. The members of the agricultural faculty expressed themselves as heartily in favor of this arrangement, believing that a degree given under such conditions represents more than if the requirements were determined by the agricultural faculty alone. No distinction is made at Minnesota between men engaged in research, extension, and resident instruction; except that county agents are not given any academic privileges.

The Montana State College is a small institution and has had no problems of faculty coordination. The representatives of the departments of agriculture, engineering, chemistry, and home economics all play a part with the president and chancellor in shaping the curriculum and activities of the institution. All members of the faculty are free to accept compensation for outside activities, but men in agriculture have never done so. All members of the staff above the rank of instructor get sabbatical leave and other academic privileges. County agents have the rank of instructor and can not go higher in the academic scale.

At the University of Wisconsin the faculty of the college of agriculture is an integral part of the university faculty, "not only physically, but spiritually and intellectually." There is team work in every phase of the activities of the university and college and particularly in research, where Dean Russell spoke of the tremendous advantage of the cooperation of other academic departments. The general faculty body in which all members of the staff of the college of agriculture of appropriate rank may sit, must ratify all courses and requirements in agriculture. All members of the faculty are employed on a basis of nine months' service, may accept outside work for pay, and receive a sabbatical year under certain conditions. No distinction is made between men in instruction, research, or extension in any of these regards except that county agents are not included. The university believes that it is advantageous for men to engage in all three of these activities and that no one of them may be set above or below the others.

At the University of Illinois there is an academic senate consisting of all persons of full professorial rank and all heads of departments. This body has power over the college of agriculture as to educational policy and must approve all new courses, curricula, and departments.

Meat Laboratory, Iowa State College.

It has no part in the appointment or advancement of professors or in the determination of budgets, all of which are taken up directly by the deans with the president. Employment is on a twelve months' basis in all colleges, but agricultural men actually work eleven months as against ten months in other departments, getting proportionately larger salaries. Faculty members may accept outside work for pay and do so to a limited extent. No distinction is made between instruction, research, or extension; all being regarded as mere phases of the broad work of the college. County agents have no academic rank and are not considered as part of the agricultural college organization.

The College of Agriculture at Purdue University consists of seven departments—agronomy, animal husbandry, dairying, farm management and rural economics, horticulture, poultry and farm mechanics. There are four deans: of science, agriculture, engineering and women. An executive committee consisting of these deans and the heads of the various departments meets frequently to consider matters of policy and routine. The faculty consisting of all teachers above the rank of instructor, meets monthly to discuss and determine policy on matters connected with curriculum and degrees. Promotion and salary is determined by the president on recommendation of the heads of departments meeting together. Men in all departments, except agriculture, are permitted to accept outside work, the theory being that members of the agriculture faculty are paid for full time. This is only a theory. Instruction, extension and research are separate at Purdue, responsibility in each case being to the appropriate subject-matter department. Members of the experiment station staff and extension service are not given professorial titles and have no part in faculty meetings or legislation. Members of the faculty engaged in teaching are expected to make rural contacts during the summer.

Iowa State College includes agriculture, engineering, home economics, veterinary medicine, industrial science. There is also a graduate school under a separate dean. Each division has its own faculty. There is also a general college faculty to which matters come up through the division faculties. This general faculty takes final action in all matters of course, curricula and degrees. The deans form an administrative board which meets once a week. Division faculties and general faculty meet once a month. All members of the staff except county agents, whether engaged in teaching, research, or extension, are eligible for membership in their appropriate faculties. Some faculty members are on a nine months' and some on a twelve months' basis, all high positions in agriculture being on the latter. Salaries are adjusted to meet the conditions of employment and outside work for pay is permitted.

The three departments at Ontario Agricultural College are technical agriculture, the science of agriculture and home economics. Each of these has a head who has no particular title. The faculty is organized into committees which decide on the courses to be given. The recommendations of the faculty are then submitted to the Minister of Agriculture of the province and to the University of Toronto. The University takes considerable interest in the work of the third and fourth years. It is illegal for faculty men to accept outside work. All members of the faculty are on an equal basis, no matter what activity they may be

engaged in. County agents are not connected with the college but are directly under the Minister of Agriculture.

The faculty organization at Cornell is established by university statute. Each college has a separate faculty to which all members of the staff are eligible. These separate faculties join to make the general faculty, in which, however, instructors do not sit. The general university faculty has no power over the agricultural college faculty except by recommendations to the board of trustees. It is recognized, however, that the general faculty should have final jurisdiction in all matters affecting the university as a whole. In the opinion of Dean Mann, the right of the general faculty to consider and even veto agricultural college recommendations is of great value, since it insures serious and careful consideration of all important matters. Extension men have no part either in the college or university faculty, except for those who had seats four years ago when the present rule was made. All persons engaged in teaching or research (including men in the extension division) are members of the faculty. All members of the staff are on a nine months' basis and the rules provide that all time necessary for full performance of university duties must be given, but that beyond this the faculty man is free to accept employment. The administrative organization of the college consists of a dean and director, a vice director of research, a vice dean of instruction, and a vice director of extension.

The Massachusetts Agricultural College, being exclusively devoted to agriculture, has no problem of faculty relations, the five divisions of horticulture, agriculture, science, rural social science, and the humanities all coming directly under the president. Teaching, research, extension, and short course work are not watertight compartments, the five divisions cutting across all of them. Members of the faculty are divided into three classes with reference to outside work for pay: (1) extension men who must give full time to the university, (2) men occasionally doing extension work, who may accept a minimum of outside employment, (3) men who infrequently give extension lectures, who are encouraged to do casual work for pay.

At the University of California by the standing orders of the regents, the Academic Senate consists of the president, deans, directors, recorder, librarian and all professors and instructors giving instruction in any curriculum under the control of the Academic Senate; but instructors of less than two years' service are not entitled to vote. The senate determines its own membership under this rule, and, subject to the approval of the regents, determines the conditions for admission, for certificates, and for degrees. It authorizes and supervises all courses of instruction in the academic and professional colleges and schools. It recommends to the regents all candidates for degrees in course. It is authorized to select a committee to advise with the president concerning the budget, and a committee to confer with the regents on any matter affecting the welfare of the university.

The faculties of the various colleges and professional schools have such powers as may be delegated to them by the Academic Senate, but no change in the curriculum of a college or professional school can be made by the Academic Senate until such change has been submitted to

the formal consideration of the faculty concerned. The Council of Agriculture which conducts the government of the College of Agriculture consists of:

1. The president of the University.
2. All members of the Department of Agriculture who are voting members of the Academic Senate.
3. One representative of each of the departments of the university giving required courses of instruction in the College of Agriculture, such representatives to be nominated by the departments concerned.

The last list of members of the Academic Senate, published in October, 1920, includes 793 persons of whom 159 give instruction in the various fields of agriculture.

The general situation would seem to be that a large measure of autonomy is granted the college of agriculture, or the agriculture department, in practically every institution, only such regulation and supervision being maintained as will insure unity in matters of general policy. On the other hand, the stronger colleges welcome a consideration of their faculty qualifications, courses of study, and requirements for graduation, by some general faculty body. The situation at California for the past two years would seem to indicate that the institution is going through a similar experience to that which, from time to time, has marred the relations of the college of agriculture with other colleges in universities throughout the country, and which may be expected soon to subside, if it has not already done so.

Student Enrolment.

The following table shows more clearly than any discussion could the situation with reference to enrolment in the agricultural colleges of the United States. There is very evidently no great horde of eager young people clamoring for an opportunity to work out their destinies on the soil. Everywhere enrolment is lower than one would expect it to be in consideration of the character of the states in which the colleges are located. The truth is that the Morrill Act came as a result of the ideas of one man, not in response to a great social need, and the supply of agricultural colleges has been greater than the educational demand ever since. Fortunately they have abundantly justified themselves in the influence they have exerted, but the disappointment of California at the comparatively small enrolment in its agricultural college is shared by every state which we visited, no matter what the type of institution in it. The more the commission studied this problem the more it was convinced that the problem of increasing enrolment in agricultural colleges and keeping boys on the farm is not to be solved by changes in curriculum, equipment, or method, but by the betterment of the social and economic conditions of rural life. No plan which leaves this out of major consideration is going to succeed in keeping farmers' sons in great numbers on the farm or in attracting the sons of city dwellers to it. This is the great work of the college of agriculture today, and in it the University of California has no superior so far as we could find.

ENROLMENT STATISTICS.

Four-year agricultural course	1912-13	1913-14	1914-15	1915-16	1916-17	1917-18	1918-19	1919-20	1920-21	1921-22	Number farms 1920	Number of farms per four-year student

Extension Service.

The agricultural extension service of the University of California exists to improve the farms and farm homes of California by demonstrating improved practices in agriculture and home economics. It carries to the farmers of the state the results of the research of the University. The service began in 1913 when the first farm adviser was installed in Humboldt County. The funds expended during 1921 were \$141,481 from federal sources through the Smith-Lever Act, \$224,548 from state appropriations, and \$147,800 from county appropriations. The organization of extension work in California is as follows:

(a) Farm advisers.

41 Farm advisers.

33 Assistant farm advisers.

3 Assistant state leaders.

(b) Home demonstration.

21 Home demonstration agents.

2 Assistant state leaders.

1 State leader.

(c) Boys' and girls' agricultural clubs.

10 District club leaders.

3 county club leaders.

3 Assistant state leaders.

(d) Specialists.

3 Home economics specialists.

2 Poultry specialists.

11 Specialists in dairying, citriculture, agricultural engineering, cooperative marketing, farm management, irrigation, walnut growing, pomology and illustrative materials respectively.

(e) Public service.

1 Director.

4 Representatives.

The extension service works largely through farmers' organizations such as the farm bureau, but has been very careful to limit its activities in this connection to educational matters and to avoid anything verging on the political. This feature and its intensively developed activities are the chief differences between the University of California and Oregon Agricultural College. At the latter institution the extension service actively engages in the promotion and assists in the conduct of all the activities of the farmers, even when, as in the case of marketing organizations, these tend to be commercial. Both at California and Oregon the county agents do not have academic status or privileges and receive only two weeks' vacation.

In Minnesota the extension service is strong and active, 72 out of 79 counties having farm advisers. Despite this fact the director of the service complained that the ideas of the university were not being adequately disseminated among the farmers of the state. He advocated better training for agricultural specialists and better publicity. The publicity of the Minnesota division at the present time consists of monthly publications for county agents, a fortnightly for high schools,

and a weekly newspaper for all who are interested. Each of these is put out in a form easy to read, not in six point type.

There are two distinctive features to the extension service at the University of Wisconsin. First, the director has no staff except for administration, the specialists being called from the various departments of the college. This is in accordance with the Wisconsin theory that there should be no separate staffs for instruction, research, and extension, but that economy and efficiency are both promoted by having men work in each of the three divisions as the need arises. Under this system the alfalfa specialist directs and himself carries on alfalfa research, teaches with reference to the product, directs the work of the county agents, and personally engages in extension work. Second, much of the results of agricultural experimentation at the University of Wisconsin is disseminated through the so-called Agricultural Experimental Association, with over six thousand members, an organization of the graduates of both the college and the farm school. Agronomy has been particularly aided by this arrangement, but sections of the association foster various lines of agricultural effort. The extension division at Wisconsin functions through all the farm organizations, not through the farm bureaus alone or primarily. There are 56 county agents in Wisconsin, none of whom has any academic connection.

At Purdue there is almost the reverse of the Wisconsin situation, instruction, research, and extension being separated and differentiated to the fullest degree possible, although the responsibility of each division is to its subject matter department. Also, only persons engaged in instruction get academic titles and research and extension men generally do no teaching. Purdue is notable for the fact that it has 40 extension specialists, a larger number than any other institution. There are 86 county agents and 3 home demonstration agents, whose salaries and expenses are met jointly by the University, the state, county, and federal governments and the farm bureaus. There is entire agreement among all these agencies that the extension service should undertake only educational effort; and should not work with farmers' organizations along commercial lines.

The county agents of Iowa are not selected by the agricultural college, and are not under its direction, but are the appointees of the county farm bureaus. They are paid by the farm bureau and the county, the college subsidizing the work from state and federal funds to the extent of not more than \$600 per year. As in most other states there is but one of these agents to a county. There are no home demonstration agents, Iowa being convinced that one county organizer is sufficient and that the field of the home demonstration agents can be adequately filled by home economic specialists. Extension specialists are responsible to their subject matter divisions for what they teach, and to the extension division for the disposition of their time and efforts. Frequent conferences are held between the specialists and their subject matter divisions, and an attempt is made to get the results of discovery into the field as promptly as possible. There are 100 county agents in Iowa, one for each county.

At Cornell the extension division in addition to the usual lines of work, undertakes the development of rural dramatics, music, athletics, etc., and has been very successful in this field. Otherwise the Cornell

system is very similar to that in California, which was organized under a Cornell man. Extension specialists report to the subject matter departments, of whose staff they are members. County agents have no academic status and take only an educational part in farmers' organizations, being barred from holding office. Despite this careful attitude, Cornell has suffered heavily in the legislature for its aid to farmer movements.

Extension work in Massachusetts has not been highly developed, the funds received under the Smith-Lever Act being very small because of the high ratio of urban population. What county agents there are, are employed by the counties, although they look to the college for direction in practically all their activities.

As a result of our observations it would seem that the agricultural extension service of the University of California is not surpassed by any other, but that colleges of agriculture are less successful in getting their results into the hands of the farmers than in their other activities. This was due formerly to the fact that practically the only agency of dissemination was bulletins, which are still very largely relied upon. These accomplish in very limited degree the end sought, farmers having shown a decided preference for personal instruction. The results of lectures at farmers' gatherings, short courses, and farm adviser activities are greater, yet there is still much to be done, for the fact remains that after over forty years of well-supported activity the colleges have not been able in large measure to check the waste of the resources of the soil. More and better farm advisers are needed, and more, and more and more publicity to all the manifold activities and accomplishments of the college and the university.

Curricula and Standards.

The first indication of high standard in any institution is the qualifications which it demands of those who wish to matriculate. The next evidence is the content of the courses which it gives, the quality of the men who teach, and the quantity of work required for graduation. In this section of the report an attempt is made to compare the institutions visited by the commission on this basis.

The University of California admits any graduate of a California high school who is recommended by his principal. The only other method of entry is by examination. No specific subjects are required but each college suggests certain groupings which will facilitate the student's work. For instance, the college of agriculture recommends the completion in high school of four years each of English and mathematics and one year each of physics, chemistry, history and geometrical drawing. There is no difference between the admission standards of the college of agriculture and other parts of the university.

Students may matriculate in Oregon Agricultural College on presentation of a certificate of graduation from high school with fifteen units of work, which must include three units of English, one unit of algebra, one unit of geometry, and five units chosen from English, mathematics, foreign language, laboratory science, and history. These requirements are not enforced with absolute rigidity, students being admitted with less than the minimum number and kind of units, or even in some cases without high school graduation. Purdue University has practically

the same entrance requirements as Oregon, but is strongly opposed to the admission of students who are not fully prepared, experience having demonstrated that most of these do not get through the first year.

Students are admitted to the college of agriculture of the University of Illinois upon examination, or on graduation from an accredited high school with fifteen units of work, including three units of English, two units of science, and one unit each of algebra and geometry. In case these requirements are not satisfied, ten units may be offered from an accredited high school and five units secured through examination.

At the University of Minnesota admission is by certificate or examination. Certificated candidates must have completed the equivalent of a four-year high school course and must present:

1. Four units of English or three units of English and one unit of a foreign language.
2. One unit of elementary algebra and one unit of plane geometry.
3. Enough additional work to total fifteen units.

Every prospective student is examined on his familiarity with farm practice, and farm experience is required during the college course in accordance with the results of this examination.

Matriculants at Cornell must be graduates of a high school and must present fifteen units of credit including three each in English and a foreign language, two in mathematics and one in history. The University prides itself on its high standards and has not for years admitted a student with less than the minimum, except in the case of a very few mature special students with unusual experience qualifications. Statistics as to student records indicate the wisdom of this policy, for inadequately prepared students are shown in a large majority of cases to have failed to profit by their courses.

The College of Agriculture at the University of Wisconsin admits students on the presentation of a certificate from the principal of an accredited high school showing graduation, and satisfactory completion of fifteen required units, including three units of English, two units of foreign language, science or history, and one unit each of algebra and geometry. Graduates of non-accredited high schools are admitted under the same conditions on probation.

At Massachusetts Agricultural College admission is obtained on examination or graduation from a high school approved by the New England College Entrance Board. Every candidate must present or pass examinations in fourteen units of work, three of which are in English, two in a foreign language, one and one-half in algebra, and one in geometry, but some are admitted on probation with two units of deficiency.

From this summary and the table on page 55 it will be seen that the admission requirements of the University of California are more strict than those of any other institution, except possibly Wisconsin, and even in this case the possibility of probation offers an opportunity for flexibility which does not exist in the California system. This situation can not be ignored in considering why certain California boys and girls seek their education in neighboring states. The commission found practical unanimity of opinion throughout the country in favor of high standards of admission, and the history of the past few years shows that the undignified scramble for students which characterized so many land grant colleges in the past has largely ceased and all are working

toward a minimum standard of high school graduation and certain specific preparation. On the other hand, the recommendation of the principal is not considered elsewhere as a necessary or valuable factor in the selection of matriculants.

The requirements for the bachelor's degrees in the University of California are:

1. Four years of residence.
2. A summer course of six weeks in special work connected with the major subject, or three months of practical work under certain conditions:

3. One hundred and thirty units of study including

High school or university work:

English	twelve units
Mathematics.....	ten and one-half units
Physies	three units
History or economics.....	nine units
Mechanical drawing	two units

University work:

Botany	six or eight units
Chemistry	ten units
Geology	three units
Hygiene	one unit
Military science	six units
Physical education	two units
Zoology	five units
Agricultural chemistry, bacteriology, genetics, or soil technology.....	eight or nine units

4. Thirty-six units in the upper division (third and fourth years) of which twenty-six must be in agriculture.

In addition to these general requirements there are specific requirements in the various majors amounting to from 26 to 30 units during the four years.

The graduation requirements of the other institutions visited are not discussed in detail, since they are in general similar to those of the University of California, but an attempt is made to touch upon what notable or interesting differences are characteristic of particular colleges. For instance the typical difference between California and Oregon Agricultural College is the greater number of optional courses in the former institution (or to put it another way the great amount of required agricultural work at Oregon) and the wider range of majors—a point which will be discussed further.

Iowa State College permits no elective courses in the first year and very few thereafter. Each student before graduation must complete six months of practical work on a farm or at the university, preferably the former. This is without credit value, but by doing additional work on a farm, which need not be under the direction of a professor, he may secure a limited amount of credit toward graduation.

The University of Illinois is notable for the large number of electives in its agricultural course particularly in the upper two years. The theory of the college is that the graduate in agriculture should have a

broad foundation on which to build his technical success. At Purdue all students take the same course for the first two years. This course is designed to give the student a general view of the whole field of agriculture and to enable him to choose his specialty for the last two years wisely. In the junior and senior years two subjects (history and economics) and a group of electives are required of all students.

At the University of Minnesota there is a rather free system of electives both in and out of the college of agriculture, and in addition 50 per cent of the prescribed work of the freshman year and 25 per cent of the prescribed work of the sophomore year is in courses not given in the agricultural college. This is somewhat characteristic of the University of Wisconsin also, where of the 133 units required for graduation in agriculture, 35 are in the college of letters and science. Moreover, the average agriculture student in this institution takes in addition to these 35 required units $16\frac{1}{2}$ elective units in colleges other than his own. In 1921, 167 agricultural seniors elected 20 units in English, 92 in economics, 16 in education, 73 in history, 96 in public speaking, 74 in psychology, etc. President Birge stressed the economy of this arrangement and the fact that under it all the money appropriated for agriculture can be used exclusively for that purpose.

Cornell University has 19 or 20 departmental units in its college of agriculture in any one of which a student may specialize, but outside of this rather wide field there are very few electives and not more than 20 of these can be taken in other colleges of the university. Every student, on the other hand, must have the following courses which are not given in the agricultural college: English, physics, chemistry, economics, animal or human physiology. Geology is also required of certain students and taken by many. In order to graduate from the New York State College of Agriculture at Cornell University every student except those in botany and landscape art must pass an examination in actual farm practice, based on at least one year's work done on a farm outside of the college year and reported on by the student and the farmer who employs him.

The following summary of the more important requirements of the various institutions visited and a comparison of the average with the University of California may be interesting:

	University of California	Average of other universities
Chemistry -----	10	11.2
Botany -----	6	5.5
Mathematics -----	10.5	8.5
English -----	12	12
Economics and history -----	9	5.7
Zoology -----	5	4
Agronomy -----	0	3.2
Animal husbandry -----	0	4.3
Agricultural engineering -----	0	2
Horticulture -----	0	2.5
Dairying -----	0	2.5

This would indicate that the University of California follows very closely the average of the other institutions except in the case of the standard underlying agricultural subjects. Of course, most students do take some or all of these, but the fact remains that a man may grad-

Laboratory Agricultural Engineering, Iowa State College.

uate from the college of agriculture of the University of California without having taken any course which was definitely agricultural. Considering the fact that every agricultural graduate is expected to have some vision of the scope of agriculture and country life, and some possibility of eventually becoming a farmer, this would seem to be an undesirable situation—a conclusion which is confirmed by the program and curriculum of every institution which we visited.

The best way to obtain an idea of the curricula of the various agricultural colleges is probably to investigate the opportunities which they offer for specialization, or in other words, the scope and strength of their majors. From the point of view of variety the University of California covers a wider range of subjects than any institution in the United States. For instance, it is the only institution offering majors in citriculture and viticulture, and only Oregon and California give courses in fruit products. The pomology major, while given generally, does not seem to be nearly as highly developed elsewhere as at the University of California. Forestry and agricultural science have also been developed admirably here.

Conversely, there are several weak spots in our system of majors, particularly in animal husbandry, agricultural economics, and perhaps agronomy. In animal husbandry, the number and type of courses is restricted.* For instance, no courses in meat and meat products are given, and live stock marketing is lacking. In agricultural economics very few courses are given considering that California is probably the foremost state in cooperative marketing organizations. The absence of courses in the marketing of the various agricultural products, fruit, live stock, etc., which are given generally elsewhere, is very noticeable. In agronomy a similar situation exists. California is a great state agronomically and yet comparatively few courses are given in this basic subject. These weaknesses are of course largely due to the physical difficulties of the present situation and can be corrected in a large measure at least by the new division of work between Berkeley and Davis, and by the acquisition of land at Berkeley, a matter which the commission regards as imperative and which will be touched on later in this report.

Summing up the matter of curricula the University of California offers a greater variety of work than any of the other institutions visited and on the average offers as good or better courses. In the make-up of its curriculum also, this college of agriculture is probably in advance of most institutions. Certainly it compares almost exactly with Cornell and Wisconsin, the high standing of which is universally recognized.

The unique feature of the curriculum of the University of California is that the entering student may register either at Berkeley or Davis, and may take part of his work in both places. The course has been so arranged that students entering Davis will take either their junior or senior years at Berkeley, or both, and those entering Berkeley may take part of their work at Davis some time during the four years' attendance.

*According to the newest announcement of courses received since this paragraph was written, this situation has been corrected.

Short Courses.

At every institution visited one or more short courses are given. These vary in length from two weeks to one year and are generally successful. Oregon Agricultural College reported the following courses at which the attendance thus far has not been large:

Fruit growing and vegetable gardening-----	2 weeks
Grain grading -----	2 weeks
Beekeeping -----	4 weeks
Dairy manufacturing -----	8 weeks
Tractor mechanics -----	11 weeks
Dairy herdsmen -----	6 months
General agriculture -----	1 year
Horticulture -----	1 year

At Minnesota various short courses are offered at which the attendance has grown from 147 in 1901 to 2015 in 1921. Dean Coffey stressed the fact that such courses must furnish not only instruction, but entertainment if they are to be successful and that farmers attending them must be made to feel at home in the university atmosphere. At Montana State College there is a "School of Agriculture" which continues for six months during the college year for a period of three years, and a farmers' week. The former has an attendance of 126, the latter of 204. The University of Wisconsin has well-attended courses in dairying and tractor mechanics twelve weeks in length, and a notable winter course in general agriculture for fifteen weeks each year for two years. This latter course meets a very real need in the educational system of the state and last year had 252 students. At Purdue University short courses ten days in length were given in tractor work, poultry, dairy field work. A four-day short course is given for farmers. Courses in general agriculture, animal husbandry, dairy products, dairy manufacturing and home economics, are also given, which are eight weeks in length. Cornell offers twelve-week courses in agriculture, dairy industry, poultry husbandry, fruit growing, flower growing and vegetable gardening. The attendance at these courses in 1921 totalled 329. At Massachusetts Agricultural College a winter school of ten weeks has an attendance of 83, and a summer school of four weeks an attendance of 223. There is also a two weeks' school for country clergymen, which had an attendance of nineteen.

The University of California offers short courses both at Davis and Berkeley. The Berkeley courses of a few days each include fruit products, nutrition, land colonization and settlement, rural sanitation, economics, entomology, deciduous fruits, commercial manufacture of fruit products and beekeeping. At Davis courses of about one week each are offered in deciduous fruits and various types of dairy manufacture. Longer courses are given in poultry husbandry, and general agriculture, including animal husbandry. An eight weeks' course in forestry is given during the winter for men employed as guards or rangers in the United States Forest Service and the United States National Park Service. A demonstration school on tractors is another feature of the California program.

The short course is an effective ally of the Smith-Hughes high school and the special farm school in spreading broadcast some of the elements of farming. It helps to teach men and older boys the new farming which is at once a science, an art and a business. It makes them factors

in the conservation of resources. It is an agency for the betterment of the social and economic conditions of rural life. It should be fostered by the agricultural college, for it meets a need the regular course of the college can never fill and stabilizes conditions in the industry which the college serves.

Research Work and Experiment Stations.

The agricultural research and experimental work of the University of California has always been conducted on the theory that the varied conditions in California can not be understood or served by confining the experimental work entirely to Berkeley or to any other one locality. The field of experimentation has been as broad as the state and research has been carried on wherever conditions seemed most favorable. Centers of experiment station activity are now located at Berkeley, Davis, Mountain View, Meloland in the Imperial Valley, Kearney Park in Fresno County, Delhi, Shingle Springs, Petaluma, Porterville and Riverside. The station library and equipment for chemical, physical and biological work have been more highly developed at Berkeley than elsewhere, but these facilities for research are also being provided gradually at Davis, and at the Citrus Experiment Station, Riverside. Those three places are the sites of permanent institutions and serve as the headquarters for research in adjacent areas.

Another idea of the University of California has been that the existence and encouragement of research is fundamental to a successful system of instruction, as well as basic in the development of the agriculture of the state. All members of the staff are consequently encouraged to devote as much of their time as possible to that intensive study which leads to discovery and the extension of the bounds of knowledge. Individually and in groups representing diverse sciences the members of the college staff and the university staff are working for the advancement of agricultural science. That they are succeeding in a measure is indicated by the United States Experiment Station Record for June, 1921, which published a summary of eighty-nine distinct lines of work by seventy-three members of the staff. The annual report of the college for 1921-1922 contains a summary of 349 pieces of investigation and a list of 149 projects in progress. In the variety of problems under investigation and in the publication of reports, bulletins, and papers in scientific journals the California station ranks as high as any station in America.

The research work of Oregon Agricultural College is scattered in the different agricultural areas of the state, and is organized on a project basis. Reports are required from investigators annually. One difference from the California system is that it is the policy of the state to require the county in which experimental work is located to finance the cost of the land and original buildings.

The main center of research work in the University of Wisconsin is at Madison, where all departments cooperate in attempting to solve the problems confronting agriculture. There are also five stations at other points in the state selected for differing local conditions which could not be adequately met from the University. Research work is organized into projects and progress reports are required annually. The results of many of these experiments are disseminated very widely and

satisfactorily through an organization of graduates of the farm school and the college, known as the Agricultural Experimental Association.

In New York state agricultural research and experimentation is carried on both at Cornell University and at the Geneva Experiment Station, which is another state-supported institution. There is no legal association between the two but a working affiliation has been effected by mutual agreement. Work is also done from time to time on special problems in other areas. Cornell, contrary to the other institutions we visited, does not allot its research funds on a project basis, but makes departmental appropriations which are distributed by the department heads. The Director of Research keeps constantly in touch with all research men and progress reports are required annually.

The general program of all the institutions visited would seem to indicate that in the main research work should be carried on at the university or college center, and that stations in other localities should be established more or less temporarily to solve definite problems impossible of solution elsewhere. The pressure of geographic and political considerations which results in so much unwise expenditure of funds might be curbed by the Oregon system which places on the community a financial burden in connection with the establishment it proposes. Wherever the work is located it would seem advisable to have it organized on a project basis, carefully supervised and frequently reported on.

Relations with State Department of Agriculture.

At the request of Director George H. Hecke of the State Department of Agriculture and Dean Thomas F. Hunt of the University the commission made some study of the relations in various states between the State Department (or departments) of Agriculture and the college of agriculture. There was found to be general agreement that these two bodies should be entirely separate, the college directing and conducting all work of instruction, research, and extension, and the department representing the police power of the state and exercising all functions of regulation. The one exception was Indiana where the opinion was expressed that the logical place for the regulatory functions is with the college of agriculture, and that if a separate department is built up the inevitable result is differences of viewpoint and conflicts of jurisdiction.

The commission found no better working arrangement in any state than the agreement between Director Hecke and Dean Hunt which is set forth below.

“The State Department of Agriculture should exercise executive and regulatory powers. The college of agriculture should devote its energies to research and education, both resident and nonresident. It is quite certain that it is not in the interest of the public welfare that it should be charged with police duties. It is the function of the executive branch of the state, whose head is the governor, to enforce the laws relating to agriculture through the director of agriculture and his subordinates, and those relating to forestry through the Commission of Forestry. The functions of the University, and hence of the college of agriculture, are investigation and teaching. The college should not seek to control the action of any person. Its primary function is to determine the truth and state it accurately. The college should not have placed upon it any commercial, executive or police duties, nor

Green House and Plant Laboratory, Cornell University.

should it be the policy of the state to appropriate money to the State Department of Agriculture for education or investigation, nor should it be the policy of the state to appropriate money to the college of agriculture for regulatory purposes.”

Conclusions of Agricultural Leaders.

At each of the institutions visited the situation facing the college of agriculture of the University of California was presented in the following series of questions and the frank opinion of the various presidents, deans, professors and farmers solicited:

1. Owing to the fact that adequate provision was not made for experimental and demonstration purposes at Berkeley before the grounds of the University were surrounded by a ring of cities and because of the wide difference which exists between the climate and products of the coast counties and the large interior valleys, the work of the college of agriculture is now divided between the University at Berkeley and a branch of the Agricultural College at Davis, seventy miles distant, and in the interior valley. The plan provisionally adopted is to give the instruction of the freshman and sophomore years at Davis where an adequate area of land for experimental and demonstration work has been secured and with the possible exception of animal husbandry, to give the instruction of the junior and senior years at Berkeley in contact with the broader life of the University. Your opinion of the feasibility of this plan is desired.

2. Do you believe instruction can be given properly in a divided agricultural college under any conditions?

3. Do you believe that agricultural instruction can be given satisfactorily if it is not located on a farm?

4. How important do you consider a unified college with all agricultural students at one place?

5. How important for a college of agriculture do you consider the location at and close affiliation with a great university?

6. If yours is a college of agriculture separate from a university, would you favor union with a university?

7. If your college of agriculture is part of a university would you favor separation?

8. How long has your college been in its present form and is it, in your opinion, successful?

The opinion at Oregon Agricultural College, chiefly expressed by President Kerr, was that the plan of divided instruction upon which the University of California is now embarked is not ideal, because of the isolation of the junior and senior years from the farm, but is probably the best that can be devised and would be immeasurably improved by the acquisition of a small tract of land at Berkeley. The importance of contact between agricultural students and men in other lines of work was held to be of the highest importance, and attention was called to the fact that Oregon Agricultural College has this feature, since it is not an agricultural school but a university of applied sciences. President Kerr stated unequivocally that despite the great difficulties of the situation it was his opinion that the college of agriculture would lose its prestige and power for accomplishment if wholly separated, either physically or administratively, from the University of

California, and that division of the course between Berkeley and Davis would therefore seem to be the best solution.

At the University of Minnesota the faculty of the college of agriculture was unanimously opposed to separation, believing that a university offers a broader opportunity for students both in variety of courses and in opportunity to study under men eminent in lines of work outside of agriculture. Dean Coffey and others were not enthusiastic over the division of instruction between Berkeley and Davis, but stated that if forced to choose between this and complete physical separation from the state university, they would immediately choose the former as the lesser of two evils.

The conviction was strong at Minnesota that consolidated instruction at Berkeley would be by far the best solution of California's problem if about 200 acres of land were available at that place, but that the accomplishments of the junior college in California would indicate success for the plan of divided instruction.

Both President Birge and Dean Russell at the University of Wisconsin stressed the fact that the college of agriculture is so closely knit into that institution that no one in the state would consider the advisability of separation. Dean Russell spoke of the splendid team work between the college of agriculture and the other departments of the University and the great advantage of having men working on a research problem from different points of view. Separation in his opinion not only splits the campus, but also educational effort. President Birge stressed the economy of a united institution and its advantage to agriculture in that funds sorely needed for other purposes are not expended on basic scientific and cultural courses. The reaction of Dean Davenport and others at the University of Illinois was precisely similar to that expressed at Wisconsin.

The opinion expressed at Purdue was that an agricultural college to achieve its destiny must be connected integrally with a great university, and that while land is also a prime requisite, it need not be of great area adjacent to the campus. Grave doubts were expressed as to the divided course, the opinion of Dean Coulter being that it would not provide the atmosphere necessary to strengthen the intellectual fiber. This opinion was considerably modified after an explanation had been made by the commission of the junior college system in California and the success which it had achieved. The advice of a group of prominent faculty members and trustees was that the state should secure land at Berkeley no matter what it costs rather than to either divide or separate, but that division should be chosen in preference to separation.

According to Dean Curtis of Iowa State College, the plan of divided instruction would have formidable difficulties under any conditions and would be practically impossible without land at Berkeley. Speaking from the experience of Iowa, he stated that taking agriculture wholly away from the state university should be the last alternative considered by the commission, and that the state would find it economical and efficient to condemn city blocks if necessary, in order to maintain the unity of higher instruction.

Dean Mann of Cornell advised strongly that all work be centralized at Berkeley. In his opinion, divided instruction between Berkeley and Davis would inevitably result in two four-year institutions, neither of

which could properly meet the needs of agriculture. If this resulted ultimately in all agricultural work being given at Davis, the outcome would be most unfortunate for agriculture, because in the ensuing jealousies and contentions the University, as in all other states, would have the advantage. He pointed out the fact that a separate institution always has a bitter struggle to maintain the liberal work necessary to supplement its technical courses, and as the experience of Iowa State College has shown, can never hope to play its proper part in the field of graduate study. Dean Mann informed the commission that Cornell uses not over two hundred acres of poor farming land for instruction and that with Berkeley conditions he would acquire this area and consolidate the college of agriculture as a whole, with the University of California. Former Dean Bailey strongly confirmed this opinion, stating that with one hundred acres, a college at Berkeley would be superior to any separate institution. "All separate institutions," he said "are going backward and a state which adopts the policy of separation today dooms its agricultural college to mediocrity."

President Butterfield of Massachusetts Agricultural College saw no reason to believe that divided instruction with a junior college at Davis and a senior college at Berkeley would not succeed. He expressed his own belief in a strictly agricultural college not connected with a university or diluted by mechanic arts or engineering, but admitted that the tendency was all the other way. He concurred with the other members of his staff in the belief that some land at Berkeley would be necessary to the success of the present scheme.

Doctor True, Doctor Allen, and Professor Crosby of the United States Department of Agriculture met with the commission in New York and held a long conference on the whole question of agricultural education. A general outline of the ideas expressed at this conference is as follows: Agricultural education of college and university grade involves four large factors, (1) training managers for ordinary farm operations; (2) training leaders for agricultural enterprises; (3) training leaders in science and teachers of agriculture; (4) research. These require an experiment station and a college of agriculture with a graduate school. Extension work, such as is called for under the Smith-Lever act, is also a proper function of these institutions. When the separate colleges of agriculture were established there were no state universities and such institutions as did exist were of the old classical type, neither qualified or willing to teach agriculture. This condition has radically changed in the last fifty years, and now the colleges of agriculture united with state universities, are at least as successful as the others. The great advantage they have are the much broader possibilities of research and the finer training they can give for agricultural leadership by reason of the contacts they offer with every phase of professional life. The agricultural student should receive instruction not only about agricultural production and farm management but also about rural economics and sociology, and the relations of agriculture and country life to other occupations and interests. We do not want the leaders of the farm people to cultivate too much class feeling, but rather to be interested in their relations with other people and to get a broad vision of community, national and world problems. Severance of an agricultural college from a university at this time should not be considered for a moment.

It is out of line with all modern ideas. All the science, economics, sociology and other stores of knowledge, all the opportunities of student contact of a great university should contribute to the broad training of the agricultural student. This does not mean that experiment station work or instruction must be maintained in one location, for diffusion wisely governed may in this field be an advantage. The maintenance of a successful agricultural college at Berkeley or divided instruction between Davis and Berkeley is entirely possible with land for outdoor laboratories at Berkeley and this should be secured as promptly as possible.

The opinions set forth in the preceding paragraphs are those expressed by various educators in response to the questions on page 62. They were unanimous in opposition to separation, either physical or administrative, of a college of agriculture from the State University; doubtful of divided instruction except as an alternative to separation, and generally favorable to the location of the whole college at the site of the State University even if highly expensive land must be condemned to make this possible. The latter two opinions were, however, considerably modified in most cases when the prevalence and success of junior colleges in California were explained and particularly the notable accomplishments in agriculture by the Chaffey Union Junior College. Considering these facts, there was general agreement that divided instruction with the first two years of work in certain courses given at Davis under University direction and backed by the resources of the state would have every prospect of success.

Conclusions of the Commission.

1. Agriculture, from being a simple art, has become one of the most complex of modern occupations and modes of life, and agricultural education must, as a consequence, comprehend the practice, the science, and the business of farming, in order that men may be trained not only as tillers of the soil but as rural leaders, scientific investigators, managers of cooperative enterprises, agricultural teachers and for the many other branches of human endeavor that closely affect farm life and rural progress.

2. To meet all these demands with the highest efficiency and success, two distinct types of institution must be established, one stressing the science and economics of agriculture, the other the actual practice and business of farming.

3. For teaching the economics and science of agriculture, the college of agriculture in contact with the broad life of a university and directed by the same board of trustees is the best agency. It can not be expected to train the great army of farmers any more than the engineering colleges are expected to train the mechanics of the country, but it is the only source from which agricultural leadership can be looked for with confidence.

4. To be at all successful the agricultural college must have more land, live stock and equipment than the University of California, including Davis, now possesses, that institution being inferior in these regards to the leading institutions of the country.

5. Applying these principles to the California situation the commission recommends:

Agricultural Auditorium, Cornell University.

(a) That the college of agriculture be maintained as an integral part of the University of California under the President and Board of Regents of that institution.

(b) That for the present, the instruction of the college be divided between Davis and Berkeley in all curricula where such division is necessary to provide the physical facilities incident to a proper agricultural education.

(c) That where such division takes place it be, as far as possible in accordance with the junior college system of the state and provide for the first two years at Davis, Berkeley or elsewhere, and the last two years at Berkeley. This arrangement will fit our educational system and at the same time prevent duplication of the highly expensive faculties and equipment needed for upper division work. It will also provide a splendid opportunity for boys desiring two years of scientific agriculture on the farm rather than a complete university course.

(d) That the following additions to the Berkeley plant be made at the earliest possible date, and the first of them immediately, in order that the program of divided instruction may be put on a basis that will make the University of California the equal of any institution in the country:

1. Between one hundred and two hundred acres of tillable land within fifteen minutes of the campus. Such an area is available and aid can be secured from the bay cities in financing its purchase. This land will be used, not as a farm, but as an outdoor laboratory by various departments, and in the opinion of the commission and the faculty of the college, will meet the most imperative need which the institution faces.

2. A large acreage of hill land for the use of the forestry and animal husbandry departments. This is available and can either be leased for a long term of years or bought at a reasonable price.

3. A building similar to Hilgard Hall completing the agricultural group, to house instruction in agricultural economics and to provide meeting places for agricultural associations and for short course classes.

4. Additional classrooms and laboratories for plant and animal nutrition.

5. Greenhouses for researches in plant and animal life.

6. A factory type of building to house investigations in the means of preserving perishable products and the processes by which the products of the farm are changed into forms used in human consumption. This would include operations such as the canning and drying of fruits, preservation of meats and the manipulations of wool and vegetable fibre products.

7. A laboratory for researches and demonstrations in agricultural engineering. This is needed for upper division and graduate students.

(e) That provision for instruction in domestic science and home economics be made at Davis, in order that recognition may be given to the fact that the farm is a partnership concern, for which women must be trained as well as men.

(f) That, as more fully developed in the chapter on farm schools, the nondegree work at Davis be transferred to other institutions, and that in its place the short courses both at Davis and Berkeley be extended and developed to meet the needs of persons over eighteen who have not availed themselves of the opportunities of the Smith-Hughes high schools and similar institutions.

6. The commission recommends that the college of agriculture be granted the largest measure of autonomy in educational matters compatible with the existence of a unified university policy, and that the decision as to the extent of this autonomy rest with the president and regents rather than with any academic body.

7. The commission recommends that the admission requirements of the college of agriculture be maintained at the same level as those for the rest of the University, but that the attention of the proper authorities be called to the excellent records of many nonrecommended high school graduates in the University Farm School and to the possibility of a more satisfactory standard for recommendation from the high school to the College of Agriculture.

8. Observations throughout the country convinced the commission of the high character of the Board of Regents of the University of California and of the desirability of long terms and freedom from political interference. The commission is of the opinion, however, that in a state as highly agricultural as California, the interests of the University would be served by the more frequent appointment as regents of men who are leaders in rural life. Also the desire of the farmers to express themselves more fully on the service of their industry might be put to good use for the state and the institution if the regents were to solicit the formation of advisory committees from various phases of the agricultural industry and seek advice from these committees from time to time on the policy of the college and the needs of their field of agriculture.

9. As a result of their investigations the commission has returned to California proud of the experiment station and the extension service in this state which have only one possible equal and no superiors. Despite this fact the commission is of the opinion that the University of California is acting in accordance with the best practice of American universities and agricultural colleges in admitting to academic status only those engaged in research and resident instruction. The overwhelming verdict of the institutions visited is against according academic titles and privileges to the county agents or farm advisers, not because they are considered inferior in any way but because their activities lie outside the academic field.

10. The commission recommends that experiment station work be centralized at Berkeley, Davis and Riverside where there are permanent plants and that work on specific problems characteristic of particular localities be conducted in more or less temporary stations, thus avoiding duplication of expenses for acreage, institutional buildings and overhead. Moreover, expenses for land and buildings, even under these simple conditions, should be met, at least in part, by the community in which they are situated. This provision will do much to insure the genuineness of the need which is being pressed.

11. The commission recommends that no student be permitted to graduate from the college of agriculture who has not had at least one year of actual farm experience.

12. The commission is unanimous in the belief that one of the greatest causes of criticism of the college of agriculture of the University of California has been lack of knowledge amongst the farmers of the state as to its activities and the very notable results of its teaching and research. Some method of organizing and disseminating proper publicity concerning the work of the college and the University is strongly recommended as a means of making available to the people of the state in larger measure the benefits of higher learning. Another reason is the conspicuous absence at Berkeley of land and buildings for agricultural research and instruction. These have such prominence in the teaching equipment of all other first-class institutions (as shown by the illustrations in this report), that their lack at Berkeley can not escape intelligent criticism which will continue until this lack has been supplied.

Horticultural Building, Amherst, Massachusetts.

CHAPTER IV.

SUMMARY OF FINDINGS AND RECOMMENDATIONS.

In summary form the findings and recommendations of the commission are as follows:

Elementary and Secondary Schools.

1. The basis for a sound and practical system of agricultural education in the elementary and secondary schools of California has been provided by the federal and state vocational education acts of 1917.

2. The principal need of the elementary schools of the state is for a competent corps of instructors. If the regular grade teachers are to instruct pupils upon agricultural subjects they must receive a more thorough preparation for the work, and they should be under the close supervision of a specially trained district director of agricultural education. An alternative plan which holds promise of even better results is to place the actual teaching of agriculture in the grade schools in the hands of the local high school teachers in agriculture. When every high school has an agricultural department this will be a possible and practical solution of the problem of teaching agriculture in the elementary schools.

3. In the high schools the Smith-Hughes work has made a successful beginning and its extension is recommended. The project feature of this type of agricultural instruction has proved particularly valuable. Constant improvement of the high school teaching personnel is distinctly desirable, and is rapidly taking place.

4. Agricultural instruction given in the high schools either now or in the future, should be better correlated with the work given in the college of agriculture of the University than has been the case in the past. This is a practical possibility under present University requirements and is usually neglected because of unfamiliarity with these requirements.

5. In the opinion of the commission junior colleges of agriculture, equivalent to the first two years of the college of agriculture in a university can not be efficiently conducted or adequately financed except by the state. The brilliant record of Chaffey Union Junior College might seem to indicate that this opinion is erroneous, but we believe that the community in which Chaffey is located is unusually rich and we doubt if even it will always bear easily the constantly mounting cost of scientific agricultural education, research and extension. Whether it will or not there are certainly few other districts which could copy it, and it is therefore not practical to look in this direction for state development.

6. As a practical substitute for the Chaffey type of school and as a supplement to the college of agriculture of the University of California and its branches, this commission strongly recommends that consideration be given by the State Board of Education to the extension of agricultural instruction by the project system into the junior colleges. Under this system a reasonable number of junior colleges, strategically located, could without the very heavy expense of land, buildings, live stock and farm equipment, conduct worth while vocational agricultural courses that would be a very serviceable factor in keeping the boy on

the farm and fitting him to make of the farm a profitable business venture.

7. Finally, the commission recommends strongly that support and encouragement be given the branch of the college of agriculture at Davis where the facilities and staff are of highest university caliber and guarantee the most successful results in the first two years beyond the high school, both from the point of view of vocational and professional training. This type of school can not be duplicated by any smaller political subdivision than the state, and it should not be duplicated even by the state, which after all has not limitless finances, until the need develops. Neither enrolment nor any other factor indicates that need at the present time, but when such need does appear it would seem logical that similar institutions should be established in central and southern California.

Farm Schools.

1. The educational service of the farm school occupies a narrow field of usefulness between the Smith-Hughes work in the high schools and the collegiate instruction in the University, but within this field is of considerable importance.

2. The farm school should be a vocational training school of secondary grade teaching relatively immature persons the practical handicrafts and the well established principles of agriculture and homemaking, with a minimum of general cultural courses. It should prepare young people for farming and homemaking by the shortest route. It should emphasize the practical and, only in a very limited degree, teach the scientific and theoretical aspects of agriculture.

3. The farm schools should be primarily finishing schools, not college preparatory schools. To become the latter denies the premise upon which they were established. To care for the student who, in the farm school, discovers his "career" and wishes further education, some correlation with the University should be effected, so that certain work would be accepted for matriculation and the balance of the requirements met through examinations.

4. The farm school should not conduct research work of any kind. This can be done only by highly trained specialists, a class of men not needed to impart established knowledge to young people of high school age. It is also very expensive and requires special facilities.

5. The farm school should do no extension work. Extension work deals with mature farmers and brings to them methods based on knowledge of recent and often incomplete research. This type of service can not be given advantageously by those who have been chosen primarily for their ability to teach the immature. Reliable extension teaching, which will keep ahead of the demands of the farmers for exact information, can only be done by extension workers who are in close touch with specialized teaching and investigation departments such as exist in the college of agriculture.

6. The farm school should not admit the student over 21 years of age who has discovered too late the need of an education. This student should improve his preparation and enter the University as a special

student or should take short course work in the line of his special interest. Experience has shown that the mixing of mature and immature students of varying degrees of preparation and ability is disastrous to the effectiveness of a teaching institution. The type of short course offered at the University of Wisconsin seems to this commission to meet admirably the need of the student who fits neither in the high school, the farm school or the college of agriculture.

7. The farm school, being a part of the secondary school system, should be under the State Board of Education. This body should insure its rendering its particular service and keep it in proper adjustment with the other units of the school system.

8. The need for farm schools is limited. It is the opinion of the commission that this need in California would be fully met at the present time by the careful, efficient and attractive development of the California Polytechnic School at San Luis Obispo, to which should be transferred all the non-degree work now given at Davis except the short courses for persons beyond high school age.

Universities and Colleges.

1. Agriculture, from being a simple art, has become one of the most complex of modern occupations and modes of life, and agricultural education must as a consequence comprehend the practice, the science, and the business of farming, in order that men may be trained not only as tillers of the soil but as rural leaders, scientific investigators, managers of cooperative enterprises, agricultural teachers and for the many other branches of human endeavor that closely affect farm life and rural progress.

2. To meet all these demands with the highest efficiency and success, two distinct types of institution must be established, one stressing the science and economics of agriculture, the other the actual practice and business of farming.

3. For teaching the economics and science of agriculture, the college of agriculture in contact with the broad life of a university and directed by the same board of trustees is the best agency. It cannot be expected to train the great army of farmers any more than the engineering colleges are expected to train the mechanics of the country, but is the only source from which agricultural leadership can be looked for with confidence.

4. To be at all successful the agricultural college must have more land, live stock and equipment than the University of California, including Davis, now possesses, that institution being inferior in these regards to the leading institutions of the country.

5. Applying these principles to the California situation the commission recommends:

(a) That the college of agriculture be maintained as an integral part of the University of California under the president and board of regents of that institution.

(b) That for the present the instruction of the college be divided between Davis and Berkeley in all curricula where such division is necessary to provide the physical facilities incident to a proper agricultural education.

(c) That where such division takes place it be as far as possible in accordance with the junior college system of the state and provide for the first two years at Davis, Berkeley or elsewhere and the last two years at Berkeley. This arrangement will fit our educational system and at the same time prevent duplication of the highly expensive faculties and equipment needed for upper division work. It will also provide a splendid opportunity for boys desiring two years of scientific agriculture on the farm rather than a complete university course.

(d) That the following additions to the Berkeley plant be made at the earliest possible date, and the first of them immediately, in order that the program of divided instruction may be put on a basis that will make the University of California the equal of any institution in the country:

1. Between one hundred and two hundred acres of tillable land within fifteen minutes of the campus. Such an area is available and aid can be secured from the bay cities in financing its purchase. This land will be used not as a farm but as an outdoor laboratory by various departments, and in the opinion of the commission and the faculty of the college will meet the most imperative need which the institution faces.

2. A large acreage of hill land for the use of the forestry and animal husbandry departments. This is available and can either be leased for a long term of years or bought at a reasonable price.

3. A building similar to Hilgard Hall completing the agricultural group, to house instruction in agricultural economics and to provide meeting places for agricultural associations and for short course classes.

4. Additional classrooms and laboratories for plant and animal nutrition.

5. Greenhouses for researches in plant and animal life.

6. A factory-type of building to house investigations in the means of preserving perishable products and the processes by which the products of the farm are changed into forms used in human consumption. This would include operations such as the canning and drying of fruits, preservation of meats, and the manipulations of wool and vegetable fibre products.

7. A laboratory for researches and demonstrations in agricultural engineering. This is needed for upper division and graduate students.

(e) That provision for instruction in domestic science and home economics be made at Davis, in order that recognition may be given to the fact that the farm is a partnership concern, for which women must be trained as well as men.

(f) That, as more fully developed in the chapter on farm schools, the non-degree work at Davis be transferred to other institutions, and that in its place the short courses both at Davis and Berkeley be extended and developed to meet the needs of persons over eighteen who have not availed themselves of the opportunities of the Smith-Hughes high schools and similar institutions.

6. The commission recommends that the college of agriculture be granted the largest measure of autonomy in educational matters compatible with the existence of a unified university policy, and that the decision as to the extent of this autonomy rest with the president and regents rather than with any academic body.

7. The commission recommends that the admission requirements of the college of agriculture be maintained at the same level as those for the rest of the university, but that the attention of the proper authorities be called to the excellent records of many non-recommended high school graduates in the University Farm School, and to the possibility of a more satisfactory standard for recommendation from the high school to the college of agriculture.

8. Observations throughout the country convinced the commission of the high character of the board of regents of the University of California and of the desirability of long terms and freedom from political interference. The commission is of the opinion, however, that in a state as highly agricultural as California the interests of the university would be served by the more frequent appointment as regents of men who are leaders in rural life. Also the desire of the farmers to express themselves more fully on the service of their industry might be put to good use for the state and the institution if the regents were to solicit the formation of advisory committees from various phases of the agricultural industry and seek advice from these committees from time to time on the policy of the college and the needs of their field of agriculture.

9. As a result of their investigations the commission has returned to California proud of the experiment station and the extension service in this state which have only one possible equal and no superiors. Despite this fact the commission is of the opinion that the University of California is acting in accordance with the best practice of American universities and agricultural colleges in admitting to academic status only those engaged in research and resident instruction. The overwhelming verdict of the institutions visited is against according academic titles and privileges to the county agents or farm advisers, not because they are considered inferior in any way but because their activities lie outside the academic field.

10. The commission recommends that experiment station work be centralized at Berkeley, Davis and Riverside where there are permanent plants and that work on specific problems characteristic of particular localities be conducted in more or less temporary stations, thus avoiding duplication of expenses for acreage, institutional buildings, and overhead. Moreover, expenses for land and buildings even under these simple conditions should be met, at least in part, by the community in which they are situated. This provision will do much to insure the genuineness of the need which is being pressed.

11. The commission recommends that no student be permitted to graduate from the college of agriculture who has not had at least one year of actual farm experience.

12. The commission is unanimous in the belief that one of the greatest causes of criticism of the college of agriculture of the University of California has been lack of knowledge amongst the farmers of the state as to its activities and the very notable results of its teaching and research. Some method of organizing and disseminating proper publicity concerning the work of the college and the university is strongly recommended as a means of making available to the people of the state in larger measure the benefits of higher learning. Another reason is the conspicuous absence at Berkeley of land and buildings for agricultural research and instruction. These have such prominence in the teaching equipment of all other first class institutions (as shown by the illustrations in this report) that their lack at Berkeley can not escape intelligent criticism which will continue until this lack has been supplied.

Respectfully submitted.

HUMEOLDT REDWOOD PARK.

--"It was the past. And this was the redwoods' secret, their special magic, that they absolved, blotted out, the fever of time, the wasted years, the sickness of mind, in which men spent the loneliness of their lives."

Joseph Hergesheimer.

LETTER OF TRANSMITTAL.

SACRAMENTO, CALIFORNIA, January 2, 1923.

HONORABLE WILLIAM D. STEPHENS,
Governor of the State of California,
Sacramento, California.

SIR: I have the honor to present herewith a report, entitled "Ninth Biennial Report of the State Board of Forestry of the State of California."

Very respectfully,

M. B. PRATT, *State Forester.*

IT IS high time we, as a nation, were taking steps to carry out a national reforestation policy, or this nation will find itself out of lumber," says Captain Robert Dollar of San Francisco. "Keep out the fires after logging and nature will reproduce another crop. We must stop wasting timber and utilize it closer, or in twenty years the Pacific Coast will be mighty short of timber. Have seen Michigan and Lake states swept pretty clean of their timber, and we on this coast are fast heading in the same direction."—*The Timberman*.

STATE FORESTRY POLICY FOR CALIFORNIA.

The California State Board of Forestry believes that the continued prosperity of the state is dependent upon the continuance of a forest and brush cover on its mountain slopes. This cover must be maintained for three great reasons:

1. To insure a continued supply of timber.
2. To insure a continued supply of water for irrigation, domestic and navigation purposes.
3. To insure recreation areas for the people.

In addition to these three major lines of forestry work, there is that of highway tree planting, in which the State Highway Commission and the State Board of Forestry are cooperating, in an effort to have the state highways lined with shade trees.

CONTINUANCE OF A SUPPLY OF TIMBER.

The industries of California are dependent upon a plentiful supply of timber, which can only be secured through the wise use of what we now have.

The forests of the East have been largely destroyed, and millions of dollars are now being spent in an effort to bring them back to something of their former productiveness. The forests of California will renew themselves, as a rule, if forest fires are excluded. Natural reproduction is usually sufficient to restock logged-off lands in the Sierras, and in the redwood region the sprouts that come from the redwood stumps rapidly grow into merchantable timber, if they are protected from fire. We can never expect to have our forest areas perpetuated until forest fires are kept down. The State Board of Forestry and the United States Forest Service are doing their utmost to prevent and suppress fires in the forests of California. The lumbermen are cooperating in splendid fashion to the end that much of the area which has been and is being logged may be so protected that it will bear a second crop of timber for succeeding generations.

FORESTRY IN THE REDWOOD REGION.

The possibilities of a second crop on cut-over redwood lands have been brought to the attention of the lumber companies operating in the redwood region, in such a conclusive manner that the majority of the large operators in Humboldt and Mendocino counties have decided to practice forestry on their holdings. In a general way it has been realized for some time by foresters that the redwood region afforded an unexcelled field for the practice, but it was not until investigations were made, particularly by the Division of Forestry of the University of California and Major David T. Mason, forest engineer, that the redwood lumber companies were convinced that the practice of forestry could be made a paying proposition.

It is estimated that there is enough standing redwood timber to keep the mills running for about one hundred years longer, based on the present cut. As the supply of timber decreases in other parts of the country, however, the demand for redwood lumber will increase. Even

now some of the large operators are planning on increases in their cut. This means that the estimated supply of virgin redwood timber is going to be exhausted in considerably less time than one hundred years. Since it takes a redwood tree fifty years to reach merchantable size, it is evident that it is high time that forestry be practiced on cut-over redwood lands, in order that timber may be of sufficient size for cutting when the virgin supply is exhausted.

Natural reproduction from stump sprouts and seedlings will provide about fifty per cent of the new timber growth in the redwoods. The other fifty per cent of the timber must be furnished by planting trees. The Union Lumber Company, at Fort Bragg, has established a nursery to raise trees for this purpose, and has planted several hundred acres of their cut-over lands with different species, as an experiment to determine which ones are best adapted to their section. The Pacific Lumber Company, at Scotia, plans to establish a nursery for propagating trees to be planted on their logged-off lands. Both these companies, in addition to other large operators and owners of redwood timber, will protect their cut-over lands from fire, which does so much damage to the young trees.

The State Board of Forestry is intensely interested in the forestry developments in the redwood region, and it was for the purpose of lending its aid and encouragement that a meeting was held with members of the California Redwood Association, in San Francisco, on March 10, 1922:

MR. MACDONALD: Gentlemen, we have met here today to discuss a question in which we are all interested. Mr. Pratt has an idea that he would like to discuss forests problems. I know that the redwood men would like to meet Mr. Pratt and the California Board of Forestry for the same purpose. I can not go very deeply into this subject myself. I used to think I knew a lot about it. I used to walk through the forests and think: "Oh, well, I know this game"—and then I met, among other foresters, Major Mason, and we had long discussions, and as a result of these discussions and the further result of reading a very long and interesting report on reforestation of the redwoods, I have come to the conclusion that I do not know very much about it and therefore can not discuss it.

This is primarily a "get-together" meeting, as I understand it, in the hope that the redwood men and the State Board of Forestry can get together on the basis of cooperation looking to the reforestation of redwood cut-over lands.

I might say for the benefit of those present and those who do not know it, that some of the redwood operators, representing about 55 per cent of the total mill cut of the state, have in the last year employed Major David T. Mason as forester to lay out a plan of reforestation, to suggest a program and to recommend a method of procedure. Major Mason has given this work a lot of time and a lot of study and has made separate reports, I believe, to those who employed him for that purpose. We shall doubtless get the benefit of the reaction from his studies before this meeting is over.

Now, as I said before, I have come to the conclusion that I do not know very much about this question. Governor Pardee has given this subject a great deal of thoughtful consideration, and I wish, therefore, to introduce Governor Pardee as the chairman of this meeting.

DR. PARDEE: Gentlemen, the State Board of Forestry do not claim to know any more about redwoods, or any other kind of timber, than Mr. Macdonald, and we do know that we do not know as much about it as he does. The state board, of course, is interested in all the forests of this state. We have no pecuniary interest, to be sure, but we have an interest as citizens to see the forests Used, *Used*, USED—but to the best possible advantage, not only by those who own them, but by the people of the State of California and by the whole people of the United States of America.

The state board has no fixed ideas. They have some ideas, of course, but those ideas are open to change, to modification, to revocation, and we want to talk the matter over with the redwood people as we have talked it over with the pine people. We are going to lay all of our cards on the table—what few we have—we have nothing up our sleeves—we have no concealments to make. We are going to be on the square as well as we know how to be, humanly speaking, and we are not only going to take you into our confidence, but ask that you take us into your confidence and tell us everything you have on your minds.

I remember some very red-hot meetings that the old State Board of Conservation had some five or six years ago with the timbermen of this state, and everyone of us said exactly what we thought and we said it pretty loud, but we left the meeting room understanding each other a whole lot better than we did before the meeting. Now, the state board is of course interested in forests. First, in the perpetuation of the forests by having them *Used, Used, USED*, don't forget that, under the best possible conditions, and then we want to see (if it is a possible thing to be accomplished), we want to see all the cut-over lands reforested where it is the economical thing to do.

I remember in 1872, when I was a young boy visiting an uncle up at Arcata and Eureka, of having a conversation with him about the redwoods. I said, "Uncle Lewis, how long are these redwood forests going to exist?" He replied: "Why, Georgie, they never will be exhausted." And yet even in my lifetime at the present rate, (I will not use the word destruction,) but at the present rate of use, all of us here can see the end of them. Now the use of the forests by the owners is a perfectly legitimate one. The state board has no quarrel with them on that score, but the state board is a conservation board in the best sense of the term. It wants the forests *Used* (that is the third time I have said that), but used under the best possible conditions, and it wants to see that the cut-over lands are reforested. I have been told several times, in a somewhat joking way by redwood people, that the redwood is a sort of asbestos tree, yet we can see a lot of trouble in the redwoods from fires. I instance the Big Basin where there has been a lot of trouble, and as I walk through the redwood forests I see the effects of the fires that have been.

Now the state board is interested as citizens and as officials in protecting these forests, and you of course, as owners of timberlands are interested. Beyond that, you are interested as citizens in seeing that they are protected, not so much for the benefit of posterity (which has not done much for us yet) but for our own benefit, and so, as I say, we are willing to lay all our cards on the table, face up, and we are going to talk just as we think we want you to do the same thing. If you have any doubts we want to know them and we want to get your ideas and then we are going to sit down and talk the whole thing over and we are going to come to some conclusion that will be at least partially agreeable to all of us, and that is all we want to accomplish.

First of all, I think it would be well to get the board's attitude. In fact, I am going to call upon our State Forester, who is the expert of the board, to line up the board's attitude. After that, I am going to call upon certain gentlemen to tell what they think and everyone here to tell what he thinks, and then we will shuffle the cards and deal a new hand all around.

MR. PRATT: When I read Major Mason's report I was more than ever convinced that there is no forest region that is more susceptible to forest management than the redwood region. I heard him talk at the University the other evening, at which time he gave the measurements on certain second-growth areas in the redwoods. I was astounded to hear that there was an area of second-growth redwood timber, forty-eight years of age, which gave a yield of over 130,000 board feet per acre. I doubt whether you can equal a growth of timber like that in any other region in the world. We do not consider second-growth timber as being of great value at the present time, but when we consider that Europe is depending almost entirely upon what we call second-growth timber and paying large prices for it, we can see the possibilities of a second crop of timber in this country.

Major Berry told me he paid \$25 per thousand feet stumpage for maritime pine in France for trees that were planted twenty-five years ago. This was for very inferior material. We would not consider it good for much of anything in this country—not as good as Monterey pine, which we do not cut for lumber. The supply of virgin timber in the United States is going to be exhausted within the next one hundred years. In fact, there are predictions to the effect that our supply will be exhausted within the next fifty to seventy-five years.

We are trying to secure a second stand in the Sierras in the pine region through fire protection. Colonel Greeley says that forestry is 75 per cent fire protection. Dr. Schenck of Germany, who used to be head of the Biltmore School of Forestry in this country, says that Colonel Greeley is wrong—that forestry is 95 per cent fire protection. The problem in the Sierras of securing a second stand is much harder than that in the redwoods, because the amount of slash in the pine region which becomes highly inflammable creates a high fire hazard, and this makes it very expensive to put in a system which will protect it from fire. Major Mason says that much of the redwood reproduction comes from seedlings, which I was not aware of before. It is a simple proposition, after logging in the redwoods, to protect redwood lands, and from the studies which have been made and which will be made by the University of California this coming season I feel sure you will be convinced that the protection of your cut-over lands with the idea of securing a future timber supply is an economic proposition.

What we want you to do right now is to give adequate fire protection to all virgin timber and cut-over lands. We want to help you. I can not say what we can do right now, but we have a little money which we can devote, I am sure, to the protection of these lands. I expect to make a trip to the redwoods this spring and I am sure that we can supplement what we have already done in the past two years in Humboldt and Mendocino counties. What we are asking you to do now is to cooperate with us in protecting your virgin and cut-over timber lands in order that there may be a second crop on these very productive lands.

DR. PARDEE: One of the most beautiful sights I ever saw was a grove of second-growth trees on the main branch of the Eel River up in Humboldt County on what is called "Eleanor Flat."

Fifty-five years ago I lived up on Clay Street hill in San Francisco. One morning my father took me out on the front porch and pointed to what is now called Redwood Peak, on which there was a stand of young redwood trees. He said "My friend Tom Eager went over there ten years ago and cut down all those magnificent redwood trees, and I want you to watch those young trees all the rest of your life." The second growth has come on and has been protected from fire. It is as magnificent a second growth as I have ever seen, for the locality.

You gentlemen are interested in the preservation of the forests and their use. That is the fourth time I have referred to their use. Your money is invested in these forests, while ours is a sort of a sentimental interest, but still not, because upon your prosperity depends to a certain extent ours. Our interests are mutual in the use of the forests and we want to see those forests taken as good care of as the economy of the situation will permit. We do not want any rules that are going to embarrass you—no extra expense put upon you that is not warranted, but we do want to get together and we do want to see these things brought about as well as they may be. Time of course will vary the existing conditions—will change the conditions and will change the rules and regulations which in all probability from time to time may be put out. We have no rules that are fast and fixed, but we are going to put some out after considering and talking with you gentlemen. We may not suit you entirely, but we are going to come as near to it as we can. We are going to get along with you as humanly as we can.

I would like to hear from Mr. Burnett of the Hammond Lumber Company. I want him to tell how friendly or unfriendly he is to the State Board of Forestry.

MR. BURNETT: Answering your last observation first, Mr. Chairman, I might say that we harbor nothing but the most friendly feelings for the State Board of Forestry and it will not be our fault if that feeling does not continue.

Some time since—possibly within the last six months—some of the redwood operators, mindful of their own interests and the development of their own operations, mindful also of the duty they may owe to posterity, mindful of their own sentiments (and they are capable of harboring the same sentiments that are found in the breasts of the State Board of Forestry), mindful of all these things, a group of redwood operators who represent at least 50 per cent of the total cut of the state, felt that in Major Mason they had found the person above all others who was best adapted to go over their lands and make a preliminary report on the physical possibilities and from an economic standpoint, of reforestation and continuous forest management, and to that end Major Mason was so employed. His studies in connection with the economic aspects of the lumber industry and his residence in the timber section, peculiarly fitted him for the job and added great weight to whatever his conclusions might be. Within the last six weeks Major

Mason compiled his report which was in two parts; that is, a general report on the general subject and to each company employing him a brief summary of the conditions bearing upon that particular company's own operations, its cut-over lands, etc.

Now, Major Mason happily is with us and as has been said already at this meeting, the question of reforestation is so largely bound up with the question of fire protection that I feel that Major Mason's discussion of the subject (he summarizes it pretty briefly) will point the way to what may be necessary or proper in the way of fire protection. I therefore believe that without further extending my remarks we should call upon Major Mason to give us the result of his observations as succinctly as he can.

DR. PARDEE: First, may I ask the attitude that the Hammond Lumber Company will take, that is, as to whether it is quite friendly toward reforestation and fire protection? I ask that question simply to clear up what has already been said. Will there be any objection on the part of the Hammond Lumber Company to a policy of this kind?

MR. BURNETT: None whatever.

DR. PARDEE: Major Mason, you should have a lot of things in regard to reforestation and fire protection on your mind—will you please accommodate us?

MAJOR MASON: If I told you all I had on my mind, I am afraid I would keep you too long.

I want to thank Mr. Burnett for his kindness in thinking that I am qualified to look somewhat into the redwood situation. I would like to impress upon you if I can, first of all, that what these redwood owners have been doing is truly a remarkable and unique thing in the management of American forests. There are in this group of companies the Hammond Lumber Company, The Little River Lumber Company, The Pacific Lumber Company and the Union Lumber Company, representing about 55 per cent of the annual redwood cut. This group owns about two-thirds of the timber owned by operators. The Union Lumber Company has already adopted the policy of managing its land permanently for the production of timber crops. The other companies have had submitted to them this report upon the basis of which they will decide as to whether it is practicable to raise crops of timber on their lands or not, and if not, why not. Personally, I think that it is economically practicable to do this. All I can do is to put my personal opinion before you in this matter.

I want to impress upon you that this relatively and actually large group of owners in the redwood industry has taken this forward step in the matter of forest management. In all the rest of the United States, I venture to say, not as many lumber companies are doing likewise. There are one or two companies in the pine region of California which have done a little toward protecting the second growth, with the thought that they may possibly manage the lands themselves or trade them off to the government. In the south, in the Gulf States, there is one notable example of a lumber company adopting a policy of forest management, and that is The Great Southern Lumber Company, which has adopted the policy of reforesting its cut-over lands. So the redwood industry has the honor then today—California has the honor of having this industry foremost among the lumbermen who are considering seriously the practice of forest management.

I want to tell you as briefly as I can of some of the things which appeared from this study of the redwood situation. In the first place, the climate of the redwood region, as you all realize very well, is favorable to timber growth. The very long growing season of the lower elevations particularly is just as favorable as that of any other region in the United States. Along the Gulf Coast there is also a very long growing season, but in the timber-bearing part of that region it is no longer than in the redwood region. The redwood region has the additional advantage that the soil is very much more favorable to tree growth. The fogs are favorable. But of all, redwood is a species of tree which, on account of its ability to grow in close crowded stands—its intolerance of shade—enables it to produce much larger yields of timber per acre than is possible in the case of the characteristic long leaf pine, an intolerant tree, of the Gulf Coast. So, we have a very favorable group of circumstances for the growing of redwood timber.

In order that any owner of land may take up forest management, it must first of all be possible to grow considerable quantities of timber of valuable species, and we all know that the redwood is a valuable species—extremely valuable in the old growth. We do not know so much about the second growth yet, but we are safe in

assuming that as the virgin timber supply is exhausted, this second growth will have a high value. That is the history of every forest region, that the second growth comes to have a high value when the old growth is gone. In fact, it usually has a much higher value than the old growth at the time when the old growth was at the height of its production or exploitation. We can look forward then, I believe, to very satisfactory markets for second growth timber. As Mr. Pratt has mentioned, the growth of the species is amazing. It is amazing to see how much redwood will grow in a given length of time on good soil. Mr. Pratt did not give this particular area he spoke of full credit. In the first place, only about 90 per cent of the measured area was occupied by second-growth and instead of 130,000 feet to the acre, it was 137,000 feet to the acre, forty-eight years old. Such a stand of timber as that is a remarkable one anywhere. There is no record of second growth of soft wood that has ever given even approaching such a yield as that. We must of course keep clearly in mind that this particular area was on the very best possible quality of soil—a deep, alluvial, river bottom soil along Big River, ten miles south of Fort Bragg.

The average quality of soil, in my judgment, when properly managed will grow annually about 800 board feet per acre each year, but this growth while it sounds low, as compared with the 2800 feet of the stand mentioned before, is still an exceedingly high growth as compared with the growth of other species in the United States. We have then the species and the climate which will produce a heavy crop in a reasonable length of time. These redwood trees of the age of forty to fifty years are easily of a size to be considered first-class saw timber in any other region than California, Western Oregon and Western Washington. In fact, in other regions of the United States many of those trees would be considered unusually large.

I was rather interested in what Mr. Pratt said of Colonel Greeley's comment that forest management is 75 per cent fire protection and Dr. Schenck's criticism that he was wrong—that it was 95 per cent. Here in the redwood region we have another peculiarity—that fire protection is not as large a proportion of the problem as it is in the judgment of Colonel Greeley and Dr. Schenck. They are no doubt right as applied to the country in general, but the redwood forests are unusually safe from fire. I do not mean by that, that there is no danger from fire, for I am well satisfied there is, but the safety from fire is much greater than it is in any other region (excepting the southern cypress swamps) that I know of. The protection of the old growth redwood is an unimportant matter relatively. It is something that should be done because it is believed that it will pay, and it can be done quite easily and at a decidedly low cost. In protective work the aim should always be to reduce losses plus cost of protection to a minimum. If you have no protection your losses are apt to run too high. If you have too intensive protection your costs will run too high. It is cheaper to take some losses with a fairly good system of protection.

There are two distinct phases to the matter of fire protection. One is with reference to the second growth, and the other the old growth timber. I think there is no disagreement among those who are at all familiar with redwood that second growth, especially before it reaches the age of twenty years or so, if it is going to be managed at all, must be protected from fire; but there is quite violent disagreement as to whether it is necessary or desirable to protect old growth timber. Men who are absolutely honest, who have been in contact with the redwoods for a great many years, who are thoroughly familiar with the situation and who are good observers, have told me that they are thoroughly convinced that it is not necessary to protect old growth redwoods because fires do not occur in old growth redwoods—at least to an extent that warrants any expense whatever for protection. I want to say that I have the greatest respect for those views although I differ most radically from them. Probably neither I nor the others who think differently have yet gotten all the facts. We must get more facts about the matter of protecting the old growth to know just what ought to be done and how best to do it.

I want to give you briefly my reasons for believing that old growth as well as second growth needs protection. In the first place, any living tree is producing wood—it is growing—it cannot be alive and not grow. It will each year produce a layer of new wood between the older wood and the bark. Now, that does not mean that invariably each live tree has a net production of wood for in some other parts of some trees there may be a loss which offsets the new growth. There are various things which cause loss. One which is going on constantly in a great many trees, especially in the older trees, is the consuming of the

tree by disease—the tree is gradually rotting away. Fortunately, again in the redwoods we have a species which is consumed only very slowly by disease, but it is attacked, and injured, and slowly consumed. Now this is one of the factors which offsets growth. It may be said that in all probability the old growth redwood forests as we see them today are in just about the same condition as they were one thousand, two thousand or three thousand years ago. Ever since the climate has been as it is now in all probability the redwood forests have been in substantially the condition in which we now find them. Without those destructive forces and with the growth of the wood going on continuously, there would be a very much larger accumulation of wood than exists today.

I have already mentioned rot as working against tree growth, but that is not the only thing. The other principal destructive force has undoubtedly been fire. There have been many fires in the region. I do not know of a single acre of old growth redwoods which does not show fire scars—usually rather severe fire scars. It is believed that fires have occurred on each acre on an average every seventy, eighty or one hundred years in the life of the stand. It has been said that the Indians used to set fires to clear out the undergrowth so that travel would be easier. At any rate, there have been fires and those fires have done damage. Fire and rot working together have balanced growth.

Since there has been a great deal of discussion as to how much damage is done by fire in old growth redwood it appears that the logical thing to do is to find out. We are not going to settle anything by arguing. We must get the facts as to how much loss there is when fires occur. We must also get the facts as to how often fires have occurred within the past twenty years, for instance, under various conditions in the old growth, and with those facts it will probably be evident whether we should protect, or should not. I am of the opinion that the facts will show that fires are injurious and that we should protect, but it may be that the others will have the best of the argument when we get through. If forest management is decided upon by the companies who are considering the matter, but have not yet decided upon it, they will of course install a protective system for their second growth lands, and that protective work can automatically be extended to the old growth if, and when fires do occur.

We find in the redwood region some very fine stands of second-growth. Some examples have already been given. There are a number of thousand acres altogether of excellent second growth stands which were originally reproduced partly by sprouts coming up from the stumps and partly from root suckers and seedlings which came up in the space between the stumps. But those fine stands that we find are practically all of them more than twenty years old today, and that is because in the older cuttings it was customary for the early operator to leave some of the redwood trees that were not very promising. In addition, a great many of the Douglas and white firs were also left, and they seeded up between the sprouts. But present practice of cutting removes practically all the trees, so that the reproduction which does occur consists almost solely of the sprouts from the stumps. The indications are that these stump sprouts will furnish the necessary reproduction for about 50 per cent of the area—the remaining area being left to grow up to brush, or perhaps, in some cases left for grazing, but at any rate it is not reforesting as did the areas cut over in earlier operations.

If forest management is to be put into effect one method is to leave seed trees (which was done unintentionally in the older days), but probably that will not be done on any very great scale for two principal reasons: One that the seed trees are too valuable from a stumpage point of view to justify leaving them, and the other that the seed trees which would be most effective if left at all would be Douglas fir and white fir, which species are probably less desirable than redwood for reforestation purposes. For these reasons it looks as though it would be better to plant seedlings in the space between the stumps to reforest the other 50 per cent of the area.

What are some of the reasons why owners and communities should be interested in reforestation? The redwood industry characteristically is one in which the operations are large, with heavy investments in large plants. It is a wood which tends to specialty uses which means more refinement at the plants, and consequently, more expensive plants. Further plant investment will most certainly go on for a number of years to come. If something is not done to provide for a perpetual supply of raw material for the plants, some day very large investments will have to be scrapped and practically thrown away. The cost of reforesting is in my judgment small as compared with the benefits derived, especially from the point of view

of maintaining these expensive plants. It is on the some theory as that of applying a coat of paint to an iron bridge every year to keep it up. One can afford considerable expense in maintaining a valuable forest property rather than to let it go to pieces.

Another reason for forest management is the relation of the public to the lumberman. The public, whether the lumberman likes it or not, feels that it has a most decided interest in how these lands are managed. Take the community around about Humboldt Bay, for instance, where there are many who feel that Eureka has a very unpromising future, because some day the timber will all be gone and with it most of the prosperity of Humboldt County. The same thing applies to the railroad that runs to Eureka. If the supply of timber comes to an end, it is highly improbable that the other resources of Humboldt County will justify maintaining a railroad. On the other hand, if the forests are maintained there, the railroad tonnage will not only be fully kept up as at present, but to my mind can be greatly increased, and there can be a greater development of the forest industry and of the dependent industries than there is at present.

There are of course, a great many other points in connection with this whole subject which could be taken up, but I think I have tried your patience long enough already and will stop at this point.

DR. PARDEE: Major Mason, you say that you were employed by 55 per cent of the redwood owners?

MAJOR MASON: Yes sir.

DR. PARDEE: What became of the other 45 per cent?

MAJOR MASON: I believe that the other 45 per cent will also at some future time be interested in this subject.

DR. PARDEE: Is it not interested now?

MAJOR MASON: I do not know.

DR. PARDEE: Is it enthusiastic?

MAJOR MASON: Not that I know of.

DR. PARDEE: It is small stuff people?

MAJOR MASON: No, I would not say that. The three largest producers are in this group who are doing something. In the 45 per cent there are some other owners who are also large producers; but I will say this: In the case of a number of the smaller producers, their ownership of land as to acreage is not such as to make forest management a very encouraging proposition for them—not all of the others but some of the others. There are some of the others who probably would find forest management as beneficial as any in this group who are interested.

DR. PARDEE: The example of the big people will have a good effect on the little fellows?

MAJOR MASON: I think it will.

MR. BURNETT: In regard to the 45 per cent, I do not know whether they had a chance to be other than silent or not, but I am sure that Major Mason did not intend to omit anybody. My idea is this: The report as I have mentioned, is in two parts. The major portion is a general study. It is my idea to talk the matter over with the Secretary of the Redwood Association or with the California Forest Protective Association with the object in view of having this report mimeographed or printed so that you gentlemen may all have a copy, and this silent 45 per cent can get it and read it and think it over.

DR. PARDEE: (To Major Mason). Major, what have they done toward the protection of cut-over land, if anything?

MAJOR MASON: Probably the only protective work—in fact, about the only fire protective work is being carried on by the Redwood Fire Protective Association in Mendocino County. Its executive officer, Mr. Swales, is here and can tell you a great deal more about it than I can. In the case of most of the other owners I might say they have believed up to the present, that the cut-over lands should be managed for grazing. I am speaking now of the companies in Humboldt County where cut-over land is more valuable for grazing. Up to this time their object has

been to keep the land in good condition for grazing, which of course does not at all oppose fire.

DR. PARDEE: Are there any owners of small tracts of 160 acres or half sections?

MAJOR MASON: Relatively few.

DR. PARDEE: A large percentage of the acreage is so that they can be rounded up and talked to, and persuaded, if possible?

MAJOR MASON: I should judge so.

DR. PARDEE: Well, the outlook is not very bad then?

MAJOR MASON: I should say the outlook is good. I believe that within the next four or five years that anywhere between 60 and 80 per cent of the redwood cut will be coming from land that is under management.

DR. PARDEE: We have made a start at it then?

MAJOR MASON: A fine start, I should say.

DR. PARDEE: I should like to hear from Mr. Cole of the Little River Redwood Company.

MR. COLE: We are one of the smaller mills who participate with the larger mills in engaging Major Mason in this review of the whole cut-over situation and the reforestation of the redwood lands. For many years the handling of our cut-over lands has been a real problem. We did not know what we were going to do with these lands, if they were cut over like most of the other operators, we had the idea that their greatest economic use was for grazing purposes. In the next place, we made no special effort to keep fire out, so long as the fire was under control. This was the general situation in Humboldt County. When the proposition was first mentioned of Major Mason's being engaged we submitted very graciously and I think that all of the other smaller operators would have done so, had they been approached without protesting the small cost. There is a very cordial feeling in Humboldt County toward the State Board of Forestry on account of what they have done along conservation lines. It must be very heartening to the redwood people here to have them express themselves as they did, for the economic aspect of reforestation is one of the many aspects that would first have to be considered. In connection with the economic aspect there is the question of taxation that is still one of the features that will cut a very large figure, it seems to me, in what the redwood people are going to decide to do in forest management, if the counties adopt the policy that has prevailed up to the present time. Another thing to be considered is this: If the redwood man protects his forests and gets a reasonable second growth, as that forest grows up the assessment rate will continue to climb and the redwood operator and timber land owner I am afraid, will be obliged to forget the duty he owes to posterity of which you speak. I believe that the State Forestry Board has it within its power to render not only the redwood operators, but the forest owners in California and the public as well, very signal service in connection with some state policy looking to assistance in carrying these lands, because from what you have said I know that you appreciate that forest owners are not the only ones interested in the perpetuation of the forests and for that reason I think the owners should not be the only ones to carry the burden of perpetuating these forests. Undoubtedly we will be forced to take care of trees that are growing and to see that potential groves are given an opportunity to develop, but as to whether we can go further than that is a question we have not decided.

Major Mason's report is going to have this effect: That insofar as we are concerned we will make an effort to keep cattle out of our lands and keep out fires and I know that the people of Humboldt County are all anxious to cooperate with the State Board of Forestry. We are simply looking for light to work together to see where the best can be accomplished.

MR. WILLIAMS: This question of taxation, Mr. Chairman, seems to be the nubbin of the whole situation, and it has been running through my mind that it would be a good idea to have a committee appointed, composed of a member from this association, one from the pine association and one from our own organization, to make a study of this taxation problem and to report back a tentative plan. In Louisiana, the plan is to encourage the care and protection of cut-over lands and a specified rate of taxation is made for a period of from 15 to 40 years, the owner of the lands

complying with the conditions imposed by the law. Something of that sort might be introduced into this state with a great deal of benefit to the state and to the operators as a whole. I believe a plan of this kind would be worthy of consideration at this time.

DR. PARDEE: The state board has had in silent consideration this question of taxation for some time, but you have got to educate the people of this state—they are not yet educated up to that point. There are counties in this state where, I am told, that if the redwoods were not taxed there would be no public schools. I do not know how true that is. You have got to educate your people, but I do not know how we can go about that yet—and still Captain Williams' suggestion as to a joint committee to study the situation and report on it at some future time is a good one and ought to come, but of course you would have to amend your constitution in various and sundry ways and get the support of your people throughout the state to carry such a constitutional amendment or several of them, if necessary, so that the question is a very deep one and can not be decided off-hand, but a lot of these other things can be put into operation or started, in the way of saving second growth, keeping the fires out and taking care of what we already have, so whenever your association wishes to appoint such a committee as Captain Williams has spoken of I have no doubt in the world, in fact I am willing to hazard the statement, that the State Board of Forestry will be glad to cooperate, remembering, however, the difficulties of the situation and the things that must be overcome in order to produce the result.

I would like to hear from the Union Lumber Company. I remember a very pleasant visit I paid to them in old Fort Bragg, and I remember some discussions we had in the old Conservation Commission with the representatives of the Union Lumber Company. They were warm at times, but I must say that we left the room very kindly disposed toward the Union Lumber Company, in spite of the hard things said about us.

MR. JOHNSON: I remember the circumstance to which you refer. About this fire protection, we do believe in protecting timber. It is little damaged when fire gets in, but the cost of protection is so small that it is wise to protect it. We also believe in protecting cut-over lands. We are going to do that. It is also our intention to do something with the acreage that is cut over. This approximates about 1000 acres a year. We do not know exactly what to do, because the more I look into the reforestation problem the more I realize it is an inexact science. We have had some expert advice and we do not know just exactly what to do. The State University has put in a lot of trees at our place. Of course, we know that redwoods sprout freely. I tried to stop that. Years ago I became a rancher and we tried to make a ranch out of 4000 acres of cut-over land. There are still 1000 acres that are pretty well cleared off. The other 3000 acres are covered with second growth and yet we spent a lot of money cutting down the sprouts every year, but at any rate I will say that if that was a crime, "the punishment fitted the crime," and we managed to make a pretty good showing every year by increasing the price of butter, and in that way the farm made some profit.

To me it is a wonderful thing that the State of California has a Forestry Commission that is striving constructively with the lumbermen to work out their problems. I am very much impressed with what Major Mason has said, not only here, but in his report about the peculiar condition of the California redwood section, in connection with reforestation and I hope a lot of the others will do as we are doing, although I do not know whether that will have any influence on a future lumber supply. Now, about a yield tax—I am afraid of a yield tax, because I do not know what kind of a yield tax it will be.

DR. PARDEE: Neither do I. It is sometimes better to "endure the evils we have than to fly to others we know not of." That is why we have been so slow about everything of this kind. Your company will, I hope (I almost said "of course"), be willing to go into a sort of partnership with the state board in this matter—so that we can go in and inspect your lands and then sit down with you and smoke our pipes and talk it all over.

MR. JOHNSON: Yes, we will be mighty glad to have you do that. And you will have a fire guard right around you, so that if any fires are started, we can put them out.

DR. PARDEE: Do you remember, it used to be the opinion in the old days that the fishermen set the fires—will you admit fishermen?

MR. JOHNSON: Yes, we will be glad to let them come up.

DR. PARDEE: We will lay out a sort of a disjointed plan—one that will fit generally, perhaps rather well, but that will fit in a way, and then we can cut, and splice, and refit to suit the locality and in that way we can perhaps arrive at some conclusion as to what should be done at the start to protect cut-over lands, and, perhaps, before it is too late some of these experts can tell us how to make the cut-over land pay better as reforested land than as grazing land. I have almost always been opposed to turning cut-over lands into grazing lands. To my notion, although I am not an expert, the people who are doing that are not making much headway, except in certain localities. All those things must be considered, and we are going to sit down with our corn-cob pipes and talk it all over. It may be that some of our preconceived ideas will have to be modified on both sides, somewhat. We are willing to modify ours, if we have to, but we are going to be as reasonable as human beings can be in regard to those things, and we are going to visit you and talk with you about it and do whatever seems to be the best thing to do as a starter and let the thing develop as it will. Now, Mr. Johnson, while I think crop taxation is all right, I do not know what kind of a tax it is going to be, but I am willing to try something once, always, and we have got to make a start along those lines somewhere—when or how I do not know.

MR. MACDONALD: Chairman and gentlemen—this proposition of a crop tax and the governor's statement that he is willing to try anything once makes me think that it is something like the smallpox. The changes in taxation methods are not unlike the smallpox—if it does not kill the patient, it is going to leave a lot of bad marks, and I think this matter of taxation is one that should receive very serious consideration before it is experimented with.

There is no doubt that in this forest management problem—the reforestation of cut-over lands—there is involved the question of taxation. The private owner of cut-over lands who is reforesting for the benefit of posterity—incidentally, for the benefit of his corporation fifty to seventy-five years hence—must be relieved of some part of the tax on those lands. In Humboldt County, where cut-over lands are taxed, from the poorest lands away up on the mountain and hill sides—regular sandstone country—all the way from \$5 per acre up to \$40 per acre, the imposition of the tax becomes quite a burden, if you are not going to get anything out of it. We have been using our cut-over lands to some extent for grazing purposes, but I do not know that that is a paying proposition. In five years after our redwood land is denuded, it grows up so thick with brush that cattle can not make a living and the number of cattle per acre is reduced very materially and the price of clearing land, so as to make it habitable for cows, is too expensive, and, in my opinion, growing out of my experience, I think that the land up there is very largely only fit for reproduction purposes.

And now, on behalf of the Pacific Lumber Company, I want to assure the State Board of Forestry that the Pacific Lumber Company stands ready to cooperate with the state authorities and with the federal authorities and with all of the mill owners in the direction of solving these problems associated with the reforestation of cut-over lands and the protection of the standing timber. I do not know whether it is worth while taking up any more time discussing the question of fires in old growth timber or not. That old growth timber has been there some thousands of years—long before the white man set foot upon this soil, and when the white man came along he found some very magnificent forests. When the Digger Indian went in there he did not know anything about the beetles, and the forester thinks that it is fire that brings the beetle, and I do not know whether it is or not. The Indians used to set out fires to clear the forests, so that their traveling and hunting would be made easier, and those fires doubtless killed the beetles, but the government comes in and says: "We must not have any fires before the beetle comes along, as that furnishes another menace to our standing timber." I think, as Major Mason says, it is a subject for deep study and I do not know whether we can go off half cocked to do something unless we know that that is the proper thing to do.

I think in the matter of solving our reforestation problems we have got to make a start, and from our past experience I believe that our other problems will be solved as we go along. In Humboldt County, up in the Freshwater country, we have about 40000 acres of cut-over lands, which were cut over in the nineties. Major Mason says it is the finest stand of forest reproduction he has ever seen. That land has never been used for grazing, and in the twelve years I have been in Humboldt County I do not know of a fire that has been in there. It is a magnificent

stand of timber and covers about 4000 acres. I think that piece of news should tell us something about how far we should go, or about how far it is necessary to go in order to reproduce timber on cut-over lands in the redwood country. The cut-over lands which have been used for grazing purposes for a great many years will doubtless have to receive some additional treatment in addition to what nature gives, because the cattle trample down everything before them. Mr. Johnson, and Mr. Burnett and Mr. Cole, have so very fully covered the matter from the standpoint of the lumber operator that I do not think it is necessary to take up any more time. We are here in the interests of cut-over land; we are deeply interested in the problem of reforestation and other forest problems, and we invite you all to Scotia with all your emoluments, hereditaments and appurtenances, to stay as long as you please.

DR. PARDEE: I have a very distinct recollection of the hereditaments at the Pacific Lumber Company's plant and the appurtenances thereto appertaining, and look forward with great pleasure to some day accepting Mr. Macdonald's kind invitation.

The question of taxation we are not here to settle today. It is one of the curses of civilization and we have to deal with facts as they come. We will make it a big proposition yet. I am glad to know that this matter of reproduction and the protection of cut-over lands has occupied so much of the time of the gentlemen here today. It may not be amiss to say here that we took our lives into our hands when we went into the forests or visited the headquarters of a forest lumberman in the old days. We would feel perfectly safe now under any consideration and in any circumstances.

MR. MACDONALD: Not only safe but welcome, and we are going on with this work the best we know how, with your cooperation, and we know we will get results sooner or later.

DR. PARDEE: We hope, sooner, but later, if necessary. I would like to hear from Mr. Swales of the Union Lumber Company.

MR. SWALES: I have not much to say other than that we are deeply interested in this subject. In the matter of fire protection, I believe in thoroughly protecting these cut-over lands, and to my mind the problem in that direction is going to come from settlers. As you know, settlers are clearing lands all the time and setting out fires, and last year on the Union lands we had to fight two fires for which we had to pay the expenses of putting them out. We have instructed our patrolmen in going around and calling on them to tell them to watch out for fires. It is going to take some little time before we can get the very best of protection, but I believe in the end we will get it. However, we are making a start. We have also made a start in the reforestation of our cut-over lands. We have put out this year a great many trees for experimental purposes, to find out how they will do and whether they will grow on this slope or that slope. What we want to do, if possible, is to reforest entirely with redwoods. We believe that a solid block of redwood forest fifty years from now will be worth a great deal more than a mixed forest, but we have to experiment first to find out.

I would also like to state further that this year the Union Company is starting a nursery in which we aim to grow 1,500,000 trees and set them out, which will take up between 600 and 1000 acres a year and that is how we feel about this entire forest problem.

As to fire protection in virgin timber I believe that there is a certain fire hazard there, and although we know that fire runs through the redwoods and on going through that same forest after a fire no apparent damage is in evidence, still we know there is pine and tanbark oak burned and that goose pens are made in the redwood trees, which causes a certain amount of damage. The goose pens make it hard for the fallers to lay the trees where they would like to, consequently, they are damaged a great deal. I think, for the small amount of money that it costs, we could afford to pay a tax. The highest assessment we have ever made in our association in Mendocino County is one and one-half cents per acre.

DR. PARDEE: Did that give you adequate protection?

MR. SWALES: Yes, it did. In other words, the trouble has not been in the district which we controlled, but we have been fighting fires outside of our district to keep them from coming in. I think it is very cheap insurance for a timber owner to pay from one cent to three cents per acre for fire protection, for I think he will find in years to come that it will save him money.

DR. PARDEE: Did I understand you to say that fires set by settlers are causing you much trouble?

MR. SWALES: Some of them, yes, and some, no. Some of the settlers do not care. It all depends upon the class of men. There may be some of foreign birth who are pretty hard to talk to and who are suspicious always. I think before a great length of time we will be able to educate these people so that they will be able to see things as we do.

DR. PARDEE: How about the fishermen—any trouble with them?

MR. SWALES: I am one myself.

DR. PARDEE: I used to be.

MR. SWALES: They give us a certain amount of trouble—they are bound to—and the automobilists will cause us trouble always. It is, I suppose, a case of education right down the line. We have got to educate the people of San Francisco, for instance, who desire to enjoy the forests, that they must be careful with fire. The danger does not come from our logging fires, because these are put out instantly, but it comes in almost every case from the man who comes into our camps and goes away without putting out his fire. It is a case of education right here in the big cities, not so much in the forest lands.

DR. PARDEE: The country is being pretty well taken care of in the newspapers, I see, through press clippings—that is, in regard to the necessity for care on the part of the camper, and the fisherman and the automobilist.

MR. SWALES: The Pacific Lumber Company has started something that is a fine thing. They have put tables in their camping grounds on certain of their holdings. People come along and use those tables and go away, leaving them in pretty good shape. The company has, in a way, put them on their honor to leave the place in good condition and the public has come to look upon the company in the light of a public benefactor.

MR. MACDONALD: Do you know that two of the worst fires we have had occurred on the line of the Northwestern Pacific Railroad and were started by section men. It did \$5000 worth of damage to the down timber.

DR. PARDEE: The section foreman needs educating, too. Of course, it is a hard matter to get at, but it can be done.

MR. MACDONALD: I have mentioned that because I think that the State Board of Forestry should call the attention of the railroad people to the damage that has been done on account of these fires.

DR. PARDEE: We will make a record of that and see that the matter is taken up with the railroad company.

MR. PRATT: My experience in Humboldt and Mendocino counties has shown that split-stuff operations constitute a great fire hazard. I would like to ask Mr. Swales if adequate protection by the state, of areas lying outside the association's lines, would be the kind of cooperation he would like us to give, rather than cooperation in the protection of the association's lands.

MR. SWALES: I would like to say in regard to that, that I feel this way: We prefer to protect our timber through an assessment made on the various owners. Now, all we would like to ask, and I think Mr. Johnson feels the same way, is that the State Board of Forestry will deputize our wardens and give them power to enforce the state fire laws. We will then turn all violations over to the State Board of Forestry and will prosecute in the name of the state. In other words, we do not want the people to think that it is the Union Lumber Company that is making the prosecutions. That, to my mind, should come through the State Board of Forestry. The outside lands that are not under our association, I think, could very easily be handled through your county warden, who could look after them, and in case we ever wanted to call upon the State Board we could do so in connection with a great many of our problems. We are going to have our forest problems and we would like to feel that we could come to you with them and that you would help us out. Now, as to paying for this we feel that assessing each member will take care of this. What we aim to do in the association is to try and bring all the members who are in there—bring their cut-over lands under assessment. In other words, the Union

Lumber Company and the others who are members of the association are only paying on their green timber, whereas, the protection of their cut lands is being borne by the company itself—that is, the cost of it—so I think any arrangement you would care to make with us would be very agreeable.

DR. PARDEE: I can assure you that we are willing to do anything we can. If I had my way (but I can not have it—I never had it in my life) the State Board of Forestry would furnish protection at the expense of the state—but we can not get the money—the state can not get it for there are governors and legislatures and people like that to consider in the matter. Of course, we will do what we can. How much we can do in this particular case of the redwoods is limited to what we can get, but we are going to do what we can and that just as soon as we can. I rather think that this coming spring you will find Mr. Pratt, or Mr. Rider, or some of our people looking the matter over, or talking with you on the ground and making a report as to what we ought to do, and then we will decide on what we can do, but we will do all we can.

I would like to hear from Professor Mulford.

PROFESSOR MULFORD: If this building is in existence fifty years from today, and there happens to be a meeting in this room of lumbermen and others interested in forestry, I venture to predict that every man in the room will know, without anyone having to tell him so, that the places in the United States best adapted to permanent lumber production on a large scale are these: The southern pineries of the Gulf and South Atlantic coasts; the white pine region of the northeastern states and of northern Michigan, Wisconsin and Minnesota; the Douglas fir region west of the Cascades; portions of the Sierra pine region, and the redwood country. Of all of these sections, the redwood country will be the smallest in area, but in my humble opinion it will probably be one of the two which will produce the greatest yield per acre, the other largest yielder being the Douglas fir country of Oregon and Washington.

The redwood region has a climate and a soil conducive to very rapid timber growth, yet most of the land is not agricultural. It is the home of one of our very valuable timber species. It is easy to start new crops of this species. Water transportation is at hand and the distance is short to what is going to be a great center of population. As a result of this combination of factors, the redwood region holds out great promise. But all this is the mere opinion of a college professor and, therefore, worth nothing. I, myself, would not spend my money on such generalities.

We want, not generalities, but facts. Last summer, four members of the forestry faculty of the University of California were discussing how we could best use the small amount of money and time that is available for investigative work. We decided to give up all our other investigative work for the present, in order to get facts regarding the redwood region. This was done in the face of the fact that some of the projects to be discontinued are of real importance. We are now devoting practically all the funds available for investigations to work in connection with second-growth redwood. I want to report this action to you in order to prove to you our interest in the redwood region and our faith in its future.

The figures Major Mason has just given you were gotten by the Division of Forestry of the university, as the beginning of this program of ours. The figures thus compiled are the first of a long series that we hope to obtain. We already have much data from different sources. When the work is completed, it will be at your disposal.

DR. PARDEE: May we not hear from Mr. James?

MR. JAMES: We have no cut-over lands. We are not operators. We are merely holders of timber land and therefore I am not competent to speak on the question of cut-over lands, but I have thought a great deal about this reforestation question and am deeply interested in it. I have thought all along that the greatest obstacle in the matter of reforestation is the taxation problem, and I don't know but that I think so still. I am pretty certain that the holders of redwood lands would do everything in their power to reforest the lands, if they did not have in front of them the bugbear of high taxation for the next fifty years. If you will just figure up the taxes—not to speak of the interest on the investment—but just take the taxes, and the interest on the taxes, you will discover that it amounts to a great deal more than you realize. I have, therefore, always maintained that one of the greatest obstacles in the way of reforestation is this question of taxation. However, if that could be put, as Captain Williams has suggested, on the basis of a minimum assessment, I believe one of the greatest obstacles in connection with the redwoods would be done away with.

In regard to fire protection: We all claim that the redwoods do not need much protection, but we keep an eye on them just the same. Speaking of settlers causing trouble, some eight or ten years ago we had a fire in the redwoods and I called upon one of the settlers for help. When the fire was put out, I sent him a check for \$25. It developed that whenever that settler wanted a little money, after that, there was always a small fire in the redwoods. My observation is that large operators and timber owners are taking good care of their lands—it is to their interest to do so—and I do not know that we can improve very much on their methods. It would be hard for me to suggest any other way in which we could improve on the methods employed by the large owners of redwoods. We do not do very much ourselves, although in every locality in which we have timber, up in Humboldt and over in Mendocino, we have men who keep us posted on anything that is going on and they let us know immediately about fires. We have found from observation that trouble comes from outside ranchers clearing land and from the split-stuff operators—those small fellows with about forty acres or so—who go away and leave everything unguarded that is a menace to the country. If some way could be devised to regulate these things without working a hardship on the large operator, I believe it would be a good thing.

As I said at the beginning of my talk, we are not operators, but we are with the State Board of Forestry and with the operators who have gone to the expense of engaging Major Mason to give his opinion on these matters and we would like to see more of the land reforested.

DR. PARDEE: I would like to hear from Mr. Rhodes of the California Protective Association.

MR. RHODES: Something has been said here about cooperation and I believe that almost everyone who has spoken has mentioned it. Last fall, after a study of about a year, I wrote a series of four papers on Timber Growing in California, and the last one of them—the fourth—was devoted to the subject of cooperation. I think the way that worked out was that there should be cooperation on the subject of securing a full stand of timber, and in working at those papers the matter of having a full stand of timber on any land that will grow trees showed up as very important. If half of the land only is growing timber it may be compared to the wheat farmer who has only half of his land sown to wheat, and who has to charge off against that half crop the expense of growing it, taxes, insurance, fire protection, etc., so that it seems to me that cooperation to the end of having a full stand of timber would be one of the best things that the owners of timber lands could undertake.

Another way in which cooperation could be carried on would be in the number of trees to plant to the acre and the kind of trees in different locations, and those things that Major Mason has mentioned in a practical way as being contained in the reports which he has made and which I hope we will have an opportunity of seeing. Cooperation of this kind will mean that each one will have a different experience and from these experiences all will learn, so that it will not be a very great number of years before the combined experiences of all will go a great ways toward showing what are the best methods to be adopted to get a full stand of timber.

As to protecting the timber from fire, which is the next matter of importance, in my opinion, you will find that your cooperation reaches out a little further. First, you cooperate among each other. Then the counties are interested, as they are getting some revenue, and will have to protect the timber from fire. Next, the state will have to be interested, and they are interested, as shown by their presence here, and the federal government will have to be interested, and they are interested, as evidenced by their cooperation under the terms of the Weeks' Law.

Now, as to the matter of taxation. It happens that in this state, under our system of taxation, that the counties are the only ones particularly interested in the tax on timber lands. The state does not tax them, so that there has to be cooperation with the county assessors and boards of supervisors in the matter of taxation. They must be brought to see that it is going to take a long time for these trees to come to a profitable size and that the people of the county will get a great part of the benefit from them, and that in the end there will be an income from these growing trees—there will be something there to tax, but that until that time they can afford to lay down on the annual tax—that is—to keep it within a certain limit. I believe that it ought to be kept around five cents per acre. That amounts to two and one-half cents on \$100 assessed valuation. Then we would have to meet this proposition that in some of the counties, and more particularly in Santa Cruz, they are assessing some of the cut-over land ten cents to fifteen cents, and in some cases, twenty cents

per acre, and that is too high. It will be necessary to impress upon the county assessor that as the timber gets big it is worth a lot more than when it is smaller and it will have to be assessed higher. We may have to handle it in the counties, but it will eventually come to the point where there will have to be some legislation to help fix that, so that the county assessors would not be apt to oppose the tax.

There is another element and I should say that that would be cooperation between state authorities, the owners and the federal authorities who have to have the utilization and distribution of forest products because by their influence on freight rates and the methods of utilizing timber and the influence they will have with such men as architects and builders. Instead of having that certain influence they might be called upon by such an institution as the Forest Products Laboratory at Madison, Wisconsin, they can put a considerable percentage of short lengths on board cars. That would be cooperation in the matter of utilization and distribution, so that there are all those interests that can cooperate in all those propositions.

Then there is another. In order to do this, we have to have the cooperation of the public through publicity. That was one element Major Mason touched upon. He spoke of the natural conditions favorable to timber growing in California, and it has struck me in making the studies that I did, that many of the large sawmills own their own timber lands, carry on their own logging operations and everything that happens, from the growing of the timber to the cutting or sawing of it is carried on as a unit. It is a different matter in a country where one man owns the timber, he sells it to the logger and the logger sells it to the mill. There is not that unification in the matter of economy. It seems to me with conditions in this state which are so favorable for the reproduction of second growth timber from an economic and industrial point of view, that the owners of cut-over lands should be encouraged to bring them under reforestation as quickly as possible.

The California Forest Protective Association, having worked with all these different agencies and with all these things in view, is willing to cooperate with the State Board of Forestry with the idea in view of coming to a better understanding and carrying the message back to the timber owners and operators, and we will be glad to continue in that work.

DR. PARDEE: Thank you. I do not know all of the gentlemen here but I hope everyone has something to say. Mr. Hickey, have you anything to add?

MR. HICKEY: I have nothing to say.

DR. PARDEE: Are you agreeable?

MR. HICKEY: Very much so.

DR. PARDEE: Has anybody else anything to offer?

MR. BURNETT: I would like to make this suggestion. There has been some discussion of yield tax. The thing has gone along so far that it seems a very difficult matter to approach as regards standing virgin timber, but I do think it would be well worth while to determine what is the revenue derived by Humboldt County from cut-over lands. Have you such a study, or do you have lands that have not been devoted to grazing?

MR. RHODES: We have them up to 1913.

MR. BURNETT: There is nothing insuperable about getting an amendment to the constitution that would exempt from taxation lands which are devoted to the raising of another forest crop. The time to do that—put through such a thing as that—is now, before the revenue outlook is large and before it amounts to something that is impossible to face. What I am wondering is whether or not we are going to repeat the conditions that are extant in Michigan, or, are we going to work out a policy in the nature of perpetual forest management. I believe there is something to be done in regard to this now. I can conceive of an amendment to the constitution going through that would determine as to whether certain lands were so dedicated, so being used. I do not believe that is beyond the realm of possibilities at all.

DR. PARDEE: That part is comparatively easy. I had in mind the greater subject of yield tax which is a different proposition altogether and would be a serious matter and require a great deal of attention.

MR. BURNETT: I believe it would be a good plan to start a yield tax on second growth timber.

DR. PARDEE: Speaking of Michigan, I was down there several years ago and I went around quite a little. I do not know when or where I have seen so many discouraging things. Nobody dared paint his house, and when I inquired why,

they said they did not dare to because if they did the assessor would come around and raise their taxes. If we could take our people to Michigan and Wisconsin and other places where things like that have happened—give them a sort of an excursion—I believe it would be worth while for I believe after such an excursion we would have an easier time with our people than we have under existing conditions.

I wish somebody else would tell us something—Mr. Sinclair, have you something to give us?

MR. SINCLAIR: I think that it has been said here that it rests very largely—I am speaking now of this subject of taxation—on whether or not there will be a large effort made to reforest cut-over lands. I know the situation up in Mendocino County now and the tax burden is pretty well divided as between the ranchers and the timber owners and each side is now bearing its share of the taxes. The timber owner claims he gets but one crop and the farmer gets a crop every year. If we start in to raise another forest that strengthens their arguments.

DR. PARDEE: What is being done, or in contemplation of being done toward educating the farmer up there?

MR. SINCLAIR: Nothing at all.

DR. PARDEE: Why not start? You look like a good starter.

MR. SINCLAIR: As Mr. Rhodes has said, I will cooperate with anyone who makes the start.

DR. PARDEE: But you are on the ground. Why not start that propaganda going around there yourself? What is the matter with the local papers? You can start something practical. That would be a good job to tackle.

MR. MACDONALD: In Humboldt County the timber interests and the other large property owners are in favor of a tax commission and a tax commission was recently appointed which met with favor on all sides, to equalize and adjust taxation.

DR. PARDEE: Who appointed the tax commission?

MR. MACDONALD: The board of supervisors at the suggestion of the assessor.

DR. PARDEE: That is a good start. Anybody else?

MR. HOLMES: We concur in what has been done and we are willing to cooperate.

DR. PARDEE: Are you willing to trust us a little further?

MR. HOLMES: Yes, we are.

DR. PARDEE: We want to know if we have the confidence of the timbermen or not. While they may not agree with us and think us foolish, still we want their confidence and we ought to have it, we think.

MR. HOLMES: There is one thing about the timber owners—in regard to their taxes—they feel that foreign corporations are cutting the timber and they are getting the worst end or it right along—it is more of a political game—they are trying to soak the timber owners—he is legitimate prey.

MR. WILLIAMS: One word in answer to Mr. Burnett's statement regarding taxation. His idea seems to be that all taxation should be removed from cut-over land until it reached maturity—is that it, Mr. Burnett?

MR. BURNETT: Yes.

MR. WILLIAMS: If you attempt legislation of that kind I believe you are going to have the antagonism of the counties. I believe that a fixed tax rate—a small one for a certain number of years—

MR. BURNETT: (Interrupting) You mean a fixed assessment?

MR. WILLIAMS: Yes, at 5 cents or 10 cents per acre for a period of years—say 30 to 50 years. If you do not do that you are going to encounter opposition from these timber growing counties.

MR. BURNETT: That may be. I had not given it any thought. I was only willing to differentiate in regard to the exemption of taxation from second growth crop as against virgin timber.

MR. WILLIAMS: The Louisiana law provides that these tracts are to be protected from fire and maintained in a growing condition under the direction of the state authorities. That is their plan and I would be pleased to send a copy of that law to anyone who may be interested in having it.

MR. HICKEY: They grow timber quicker in Louisiana than they do here. I went over the timber in Louisiana.

MR. HAMMATT: I just want to add in connection with the question of cut-over land taxation, I dropped into a small office in Boston and I found there three timberland owners—one from Massachusetts, one from New Hampshire and one from Maine, a professor of forestry, a state forester and one of the federal forest men, all talking over the same problem and their problem was—a definition of what is cut-over land which is being devoted to forest growth. That seemed to be their main question and it brought out the question of taxation and what the amount of the taxation should be. The question of cooperation with the County Assessor seemed to be pretty well solved—at least so I judged from the conversation, but, I merely mention this to indicate that other states that have had a great deal more experience than California are working on it and are apparently getting somewhere on it.

There is one other thing I would like to mention, and that is, that the California Redwood Association is interested in all these problems. They are interested in cooperation. I think you can figure out for yourselves just how interested when I tell you that it was through the Association's efforts that this meeting was arranged and there is to be considered besides the question of a future stand of timber the question of more complete and more economical utilization of the material itself. We are attempting to do our bit through cooperation with the State Board of Forestry, the owners, and other organizations in regard to this question of utilization and the association is carrying on a number of experiments and intends to carry on a number more which we think will help.

MR. COLE: When I brought up those various questions a few minutes ago, I had in mind a clear division between standing timber and cut-over land. I do not think that standing timber has anything to do with cut-over land. In standing timber we have an economic problem which has nothing to do with the perpetuation of our forests. When I spoke of relief in the way of taxation I did not think of suggesting that there should be any interference with our present method of taxation.

DR. PARDEE: You are another one who is afraid of changing the tax laws. I will take the liberty of suggesting that we ask Professor Mulford to say a few words on the question of taxation. Professor Mulford was one of the members of the committee who went into the taxation question extensively.

PROFESSOR MULFORD: I used to think that I knew something about forest taxation. I know now that I do not know a thing about it. I would like to learn something about it.

DR. PARDEE: You have come to the wrong place if you are looking at me.

PROFESSOR MULFORD: I mean that literally—that I do not know. I wish we could have a careful study of this whole thing made, especially of the cut-over land.

DR. PARDEE: How would you suggest that it be done? The state board has been considering it a long while. One of the very first things that the board had up for consideration was this question of taxation of timber land—cut-over and standing—and we are no nearer a solution of the problem than we were when we started. It is all a muddle yet. What have you got to suggest in regard to it, Professor Mulford?

PROFESSOR MULFORD: I do not like to make any suggestions offhand. I would like to think it over a week.

MR. JOHNSON: I would like to express my appreciation of what the Forestry Department of the University of California is doing. For the past year they have done a great deal of experimental work in our country and I had the great pleasure of going over to the University and I wish that every redwood man could go over there and see what they are doing in the way of practical work. Another thing, we are apt to look upon college forestry as a thing not practical perhaps, but we have had some results from that department that have shown up wonderfully well.

DR. PARDEE: I am glad to hear my alma mater praised. I would like to hear from Mr. Wheeler.

MR. WHEELER: I do not believe that I have anything to add. I was unavoidably unable to be here at the beginning of the meeting. I can say this, however, that we are entirely in sympathy with the efforts that the State Board of Forestry is making to work out these various questions and I feel that there is a lot of work to be done in this matter of taxation. I sympathize heartily with the views expressed here today. There are problems which should be settled in some way but just how it is hard to say.

DR. PARDEE: Is there any way in which you gentlemen up in the redwood counties can start propaganda in the newspapers?

MR. MACDONALD: You mean in the matter of exempting denuded lands being used for reforestation purposes?

DR. PARDEE: Yes, is that possible?

MR. MACDONALD: I believe we could get a little more publicity. When these open spaces are being replanted and the actual work going on, I think we can get a better reaction from the public than we have, but we could stand more publicity. Mr. Johnson has done that—God bless him!—We are a little behind, but we are going to catch up.

DR. PARDEE: God bless you, too! Perhaps it would be well if the newspapers had something concrete to talk about in the way of reforestation.

MR. MACDONALD: I guess you are right. But there are a lot of places where they will need to have education. In southern California they need a lot of education about forest taxation.

MR. BURNETT: It seems to me a very simple proposition. It can be shown that southern California is not paying anything in taxes for reforestation that is being done in Humboldt and Mendocino counties, although they get the redwood with which to build. It seems to me that it would not be a difficult matter to get a constitutional amendment through.

DR. PARDEE: It would be better if you could get it into the newspapers and get it talked about, it seems to me. They are very touchy about taxation matters in southern California.

MR. MACDONALD: I just have a thought. In counties like Humboldt and Mendocino, for instance, as the years go on and the virgin timber is cut off, a large portion of those counties will come under what we call denuded land. As that land is denuded it is used for reforestation purposes and as I see the situation, the tax burden is merely shifted from one shoulder to another. It is not fair to have the timber growing counties bear the entire burden of harvesting the timber for the rest of the world and in any provision for a forest scheme for this state I believe that point should be kept in view.

DR. PARDEE: Like the taxation of the railroads.

MR. MACDONALD: You can readily foresee what would happen in a county like Humboldt that is practically all timber.

MR. BURNETT: What will become of those timber lands if not put into forest reproduction? If they are going to be used as grazing lands, or otherwise, then it is perfectly obvious that the county would not be losing anything at all if they were only taxed for a fifty-year period on a grazing basis. By that exemption there would be wealth created which would not be created but for the exemption so long as forest lands are taxed on a basis that would represent their fair assessed value as grazing lands or whatever use they may be put to.

MR. MACDONALD: A scheme of taxation to encourage reforestation would not presuppose such a large assessment as \$40 per acre. These counties need a certain amount of money to carry on their governmental activities. Counties like Humboldt and Mendocino which embody large areas of timber which is being cut off, thus taking off of the assessment roll highly taxable property would make considerable difference in the revenue derived by the county. Take, for instance, a thousand acres passing into a tax schedule based upon a reforesting proposition, the low assessment is going to throw a certain amount of tax, upon the resumption of taxation, upon the other property for the benefit of the state and the county. I do not know whether it is going to be treated as a national proposition or not. When your timber is all off, fifty years from now, your new crop will be coming on and taxed low and I can not see the tax picture fifty years from now.

DR. PARDEE: Has anybody else anything to offer. We want to know what you are thinking about.

MR. MACDONALD: I am thinking about getting back to my office before five o'clock.

DR. PARDEE: The state board may get out something in the way of a questionnaire. I do not know what form it will take, but when you receive it I wish you would fill it out and return it promptly. We want to know if you are interested enough in the thing to answer it. When we can get the money we are going to put some rangers out around the country to help you. Perhaps that will answer your question that a state ranger with a badge on will have more authority and will command better attention than your own employees.

I thank you for coming here today. We want you to understand that we are interested in all your problems and we want to help you solve them, if we can. We are willing to go along with you as far as we can and if it comes to a parting of the ways, we part, that's all, but we want to go the whole way and we are going to do that if it is a possible thing to do, and we are going to hold you to the same thing.

MR. MACDONALD: On behalf of the lumber industry I want to thank the representatives of the State Board of Forestry for coming here today and listening to our difficulties.

DR. PARDEE: That was our plain duty and our great pleasure, gentlemen. If there is nothing more to come before the meeting, I will declare it adjourned.

The first steel lookout to be erected by the State Board of Forestry is located on Mount Bielawski, Santa Cruz County.

Fire burning down hill on "light burning experiment." Burning material which rolled down hill ahead of main fire set fire which burned up hill.

FORESTRY IN THE CALIFORNIA PINE REGION.

The State Board of Forestry believes, that if fire is kept out of cut-over pine lands in California, natural reproduction will establish itself in the majority of cases. Fires in pine slashings not only destroy the young growth that is left, but also tend to make conditions such that it is extremely difficult for a new crop of seedlings to become established. In its dealings with the pine lumbermen of the state, therefore, special emphasis has been laid on the exclusion of fire from cut-over lands as an effective means toward the establishment of a second crop.

At a meeting held by the State Board of Forestry with the lumbermen in November, 1920, the lumbermen present agreed to dispose of the slash resulting from their operations in such a way as to reduce fire menace and protect reproduction, the method used to be left to the discretion of the operator.

Field examinations during the summer of 1921 by members of the State Forester's office disclosed the fact that the methods used by the pine lumbermen vary greatly, and demonstrated that the agreements between them and the Board of Forestry should be along more definite lines.

The State Board of Forestry, therefore, outlined the three following methods of slash disposal and fire protection for the pine region, either of which would be acceptable, and sent them to all the pine operators for their guidance:

METHOD I.

Operator agrees to:

1. Pay the State Board of Forestry from 2 cents to 4 cents per acre for each acre of his holdings, or 5 cents to 10 cents per thousand feet base meridian on annual cut of large operators, the exact rate to be determined by agreement between operator and the State Board of Forestry.

2. Immediately suppress all fires resulting directly from his operations and exercise the following precautions:

- A. Clear all inflammable material by burning or otherwise, in a manner satisfactory to the State Board of Forestry, for a radius of not less than 100 feet from all donkey and skidder settings. Each donkey and skidder crew will be equipped with the necessary fire fighting tools.

- B. Fall all snags over 20 feet in height on future cuttings within 100 feet of any railroad right of way, or any publicly traveled road.

- C. Instruct wood bosses, camp bosses, contractors and foremen to use every precaution in preventing fires.

- D. Install spark arresters on all donkeys, skidders and locomotives as required by state law.

- E. Permit the State Board of Forestry to post suitable signs and warnings at all camps and logging operations.

- F. Provide a reasonable number of men for fire fighting outside of immediate operations of company when requested by the State Board of Forestry, whenever it is not practical for the State Board of Forestry

to secure men from any other source, with the understanding that the State Board of Forestry will be responsible for the payment of all men so furnished.

The State Board of Forestry agrees to:

1. Arrange for a suitable detection system and protective system.
2. Clear railroad rights of way and publicly traveled roads of such inflammable material as in its judgment may be necessary for proper fire protection of each area.
3. Maintain a patrol system.
4. Suppress all fires occurring on the operator's land that are not directly the result of his operations and pay the cost of suppression.
5. Relieve the operator of all responsibility for slash disposal.
6. Post the operator's lands with fire warnings during the fire season.

METHOD II.

Operator agrees to:

1. Construct fire lines along railroads and publicly traveled roads by burning slash in strips of reasonable width on each side of railroad or road and to fall snags above 20 feet in height on these strips.
2. Clear donkey and skidder settings of snags and inflammable material for a distance of 100 feet at least. A further distance may be specified if thought necessary by the State Board of Forestry. Donkey engine and skidder crews are to be equipped with the necessary fire fighting tools.
3. Observe the state law regarding the use of spark arresters on donkeys, skidders and logging locomotives.
4. Suppress and bear cost of suppression of fires on his holdings. Method of suppression must be satisfactory to the State Board of Forestry.
5. Dispose of slash as may be agreed upon between the State Board of Forestry and the operator.
6. Provide a fire detection and protection system satisfactory to the State Board of Forestry.

METHOD III.

Operator agrees to:

1. Pile and burn slash as at present required by the United States Forest Service regulations on timber sales.
2. Provide for a protective system satisfactory to the State Board of Forestry.

The character of the cooperation received is summarized in the following article.

SLASH DISPOSAL IN THE CALIFORNIA PINE REGION.

W. B. RIDER, Assistant State Forester.

When the new State Board of Forestry took office in 1919, it immediately realized that one of its greatest problems was to secure some method in the California pine region whereby young trees and seedlings, commonly called reproduction, would be left upon the ground, after logging operations were completed.

At that time only two methods of slash disposal in pine areas were being practiced: That of broadcast burning, as used by lumbermen on private lands, which not only killed all reproduction but also destroyed all the seed which might be upon the ground, and which has resulted in large areas reverting to worthless brush; and that of the U. S. Forest Service as used on National Forest Land, of piling and burning all slash at reasonable distances from the young trees left after logging.

The only thing in favor of broadcast burning was the cheapness of the primary operation, while the lumbermen claimed that the cost of piling and burning which ordinarily ranges from five to fifteen dollars per acre, according to the density of the stand of timber upon the ground, was too costly to be justifiable, considering the market value of the land after it was logged.

Since both of these methods were apparently open to objection, it was obviously up to the board to suggest some method that would protect the young growth at a reasonable cost.

Believing that the lumbermen should be the best qualified to offer a solution of this problem and realizing that their cooperation was essential, the Board of Forestry called a meeting of the lumbermen on November 5, 1920, which resulted in practically all the pine lumbermen of the state agreeing to dispose of the slash resulting from their 1921 operations by some method that would, as far as practicable, protect reproduction, the method used to be left to the discretion of each operator. During the logging season of 1921, a close inspection of the logging operations was maintained by the State Board of Forestry together with a study of the condition of cut-over areas. This inspection developed the fact that while the pine operators were making an earnest endeavor to arrive at some conclusion, their efforts were not sufficiently systematic to secure the desired results.

The study of conditions on cut-over lands developed the fact that in a great majority of cases where slash remained on the ground, that a very satisfactory stand of young trees was to be found. In cases where cutting had been done ten or twelve years prior to the examination, the slash had almost entirely disappeared, and the young forest was in no more danger from fire than originally existed in the virgin forest.

The observations made by the State Board of Forestry during the field season of 1921, led them to propose to the lumbermen in the fall of 1921, a plan of disposal of pine slash which required that as far as possible all fires be kept out of slashings which were to be left upon the ground. The lumbermen as a rule accepted this plan, and as a result there was a marked reduction both as to the number and size of fires occurring on logged off land.

To prevent the occurrence of fires, some of the companies issued special warnings to their employees regarding care with fire, posted fire warnings, throughout their holdings, employed special patrolmen and additional watchmen, installed a larger number of and more adequate spark arresters, cleared their donkey settings of all inflammable material, cleared their logging and wagon road rights of way, and in a few instances constructed special fire lines. To be prepared to handle fires when they did occur, many companies installed force pumps on their donkey engines and logging locomotives, and equipped these pumps with from 250 to 500 feet of fire hose, appointed camp wardens, organized special fire-fighting crews, and provided additional fire fighting tools.

One company which followed a well-defined fire-protection plan for their cut-over land, including practically all precautions as outlined in the preceding paragraph, had a total cost of only 8.8 cents per thousand board feet for its entire operation. To this cost must be added approximately five cents per acre per annum for the next five years, to cover the estimated cost of fire-protection. Estimating the stand of timber for this operation at twenty thousand feet to the acre, the total cost for the six-year period would be \$2.01 per acre, which cost would cover the cost of slash disposal and the protection of the cut-over land from fire. At the end of the six-year period, the slash should be sufficiently decayed and the reproduction sufficiently advanced, for the area to assume the normal protection cost of two cents per

acre. During this period of protection, the value of the land would steadily increase; hence this expenditure certainly seems justifiable on all pine operations on the basis of the market value of the cut-over land. Granting that these figures are fairly representative of the cost of fire protection when slash is left on the ground, it certainly does not appear that pine operators can afford to neglect the opportunity of starting a second forest crop on their cut-over lands.

Now that the operators have borne the expense of the installation of fire prevention equipment, it is expected that their co-operation will be extended to carrying out more detailed plans, and that by next fall, still greater progress in the protection and reforestation of our cut-over pine lands will have been accomplished.

Once the lumbermen are thoroughly in accord with this work, they will not be satisfied until they leave their logged off land in the best possible shape to produce a second forest crop, and in turn this will eventually lead to the use of further practical forestry methods as will guarantee a perpetual cut in the California pine region.

UTILIZATION OF CALIFORNIA WOODS.

The chief commercial woods of California and their estimated stand in the National Forests and on private lands are as follows:

Redwood (<i>Sequoia sempervirens</i>)	85 billion board feet.
Western yellow pine (<i>Pinus ponderosa</i>)	81 billion board feet.
Douglas fir (<i>Pseudotsuga taxifolia</i>)	40 billion board feet.
White fir (<i>Abies concolor</i>)	31 billion board feet.
Sugar pine (<i>Pinus lambertiana</i>)	30 billion board feet.
Red fir (<i>Abies magnifica</i>)	9 billion board feet.
Incense cedar (<i>Libocedrus decurrens</i>)	7 billion board feet.
Lodgepole pine (<i>Pinus murrayana</i>)	5 billion board feet.
Total	288 billion board feet.

The redwood region covers about 1,400,000 acres of which 440,000 acres have been cut over. The pine stands cover an area of 14,000,000 acres, of which 1,300,000 acres have been cut over. The amount of standing timber in California seems ample, at first glance, to supply lumber for many years to come, but when it is considered that it will last less than one hundred years, based on the present cut, and that the cut will rapidly increase as the timber in the eastern states is exhausted, it is apparent that every effort should be made to utilize what we have as completely as possible.

The Forest Products Laboratory, Madison, Wisconsin, is rendering splendid service in working out wood utilization problems. The following article which was furnished through the courtesy of Mr. C. P. Winslow, director, gives information which will be of special interest to the lumbermen and wood working industries of California:

These logs, being unloaded at the Forest Products Laboratory, Madison, Wisconsin, will be cut up into sections of various sizes for testing. Beneath the canvas are 24-foot Douglas fir timbers from the Coast.

INCREASED UTILIZATION OF CALIFORNIA WOODS.

By ERNEST V. JOTTER, Forest Supervisor, Forest Products Laboratory, Forest Service,
U. S. Department of Agriculture, Madison, Wisconsin.

A desire to obtain the most complete utilization of timber products and the growing demand for western lumber, have aroused in the California lumberman a keener interest in Uncle Sam's big wood research institution, the Forest Products Laboratory of the Forest Service. Why such research was initiated on a large scale only twelve years ago is easy to understand. Wood in our country has been so abundant and so generally distributed in easily accessible forests, there were so many different species from which to choose, and competitive materials were so few, that more exact information on how to use wood efficiently did not appear essential.

That each species of wood had peculiar properties which fit it for certain uses, and that methods of preparing it for use could be improved through regular and careful study, were not considered by the industry of sufficient importance to demand scientific research. Furthermore, little attention was directed toward the use and development of by-products, or the curtailment of what we now think of as appalling wastes. This was entirely natural; in the gradual growth of a desire for definite knowledge of wood structure and for information concerning the most efficient and complete use of the standing timber, the lumber industry has followed the same course taken by other businesses—the steel industry, for example, which is foremost now in the great dependence it places on the results of laboratory investigation.

Studies of wood, unlike those in the steel industry, are practically confined to one laboratory. This is located at Madison, Wisconsin, and was not established until 1910, by the Forest Service, although the need for research in forest products had long before then been recognized by the Forest Service, and some work had been done in cooperation with various universities. The policy of the laboratory has been expressed by the present director, C. P. Winslow, in these words, "The object of the Forest Products Laboratory is to acquire, disseminate, and apply useful knowledge of the properties, uses and methods of utilization of all forest products. This has been the guiding thought in the development of the laboratory—the systematic acquiring of useful knowledge that may be transformed into the knowledge that builds up American industries."

In order to carry on research most efficiently, the efforts of the laboratory are grouped in certain main divisions, each with its force of investigators best fitted for that particular line of work.

One of these divisions includes among its activities the study of the various processes through which timber passes from the tree to the finished wooden product. In this conversion process it is recognized that there is a heavy loss, which in the case of hardwoods has been placed at approximately seven-eighths of the original volume of the tree. Probably in the softwoods it is not so great. Nevertheless, nearly 2 board feet, on an average, are wasted in the woods and at the sawmill for every board foot of lumber manufactured; the 34½ billion feet cut in 1920 was produced at a loss of nearly 80 billion feet, exclusive of the lower grades of lumber. A part of this woods loss and some of that which takes place during the later processes of manufacture, is apparently unavoidable under present economic conditions. A large share of it, however, can be eliminated; and it is to determine how this may be done that the laboratory has started a systematic survey of the wood waste that now accompanies the logging and milling of lumber, especially the low-grade stock, and the manufacture of wooden articles. In this project the laboratory has the full support and cooperation of lumber and manufacturing organizations. It is hardly necessary, therefore, to explain the necessity for studies of this character, even in a region like that of California, where there is still a large supply of virgin timber and where at times, as elsewhere, there has appeared to be an over-supply of lumber in the market. It is obvious that the supply in the country is limited and that we must use most completely the product of the tree, and it is certainly a distinct gain to the credit side of any operation if it can produce increased quantities of salable material from the available raw product.

Just how does the laboratory plan to cooperate with the industry in reducing these losses?

One method now in operation is the "Wood Waste Exchange." The purpose of this exchange, as stated by the laboratory, is "to effect the utilization of raw material, now disposed of as waste, by supplying a medium through which pro-

ducers can locate markets for woods, mill, and factory by-products and waste, and wood-consuming plants can locate material of this character such as will meet their requirements." Lists of producers and consumers of waste wood material are kept up-to-date, and periodical reports are sent to the subscribers. One of these lists, entitled "Opportunities to Buy Waste," includes information on marketable woods, mill, and factory by-products for sale; the other, "Opportunities to Sell Waste," gives the names of firms which are in the market for the various small or odd sizes of lumber described. This service is free to lumbermen and wood-using plants who wish to apply for it.

Another loss which the laboratory is endeavoring to overcome through study is the degrade or loss of lumber which results from improper seasoning. During the past two years work has been started upon several important problems associated with the seasoning of California woods.

One of these is the nation-wide study of the air-seasoning of wood. Curiously, although this method of drying wood is the oldest and will always be in use, the best practice to follow under any given circumstances has never been determined. The object of this study is to determine the best methods of piling the stock to secure the most rapid drying consistent with minimum degrade, to obtain comprehensive data on the rate at which different species dry under various climatic conditions, and to reduce the loss from stain and decay. Several study units have already been placed in the redwood region, and arrangements completed for the erection, next spring, of five study units in the pine region and several additional ones in the redwood region.

A difficulty which has long been recognized, although no effective remedial measures have been devised, is the brown stain that occurs at times in the sapwood of western yellow pine. Preliminary work has been started on this study, but it is not sufficiently advanced for any definite conclusions to be drawn. It has been found possible to reproduce the brown stain chemically, and it is evident that the submersion of logs for a long period has a very marked effect upon the tendency to stain.

Blue stain in sugar pine and western yellow pine in California caused a loss in 1920 of more than one million dollars. In seeking better control methods, the laboratory has found as yet no absolutely effective method of preventing blue stain other than kiln drying, although air seasoning and treatment with antiseptic solutions are other methods of control that can be applied. For many purposes, however, where the wood is to be covered up or painted and where the use of sapwood is permissible, there is no reason for discriminating against blue-stained material, provided no wood-destroying fungi are associated with the stain.

White fir is a species that forms an appreciable part of the stand, although not always of the cut, in some parts of California. Means of increasing the use of this species are worth while, and it is hoped that the special study of the depreciation of white fir box lumber will bring favorable results. Indications now are that proper seasoning methods will reduce this depreciation considerably. Experiments to develop the best possible seasoning practice are to be undertaken next spring.

Recent developments in dry kiln design have shown the possibility of securing more rapid and more uniform drying than can be done in most kilns now in use. The new type of kiln is especially well adapted to the drying of the various California softwoods.

The kiln-drying of California hardwoods is recognized as an important problem, and it is expected that the laboratory will be able to do some work upon this within the near future.

Several dry-kiln experiments upon madrone have been completed at the laboratory. These indicate that madrone can be dried successfully and at a reasonably rapid rate if the drying is done in a first-class kiln susceptible to close regulation of the temperature and humidity.

In connection with the seasoning of wood studies, it is worth while to refer to the kiln-drying courses given during the spring of 1922 at Eureka and Susanville, by laboratory representatives in cooperation with the district office of the Forest Service at San Francisco, the California Redwood Manufacturers' Association, the California White and Sugar Pine Manufacturers Association, the Holmes Eureka Lumber Company, and the Fruit Growers' Supply Company. Thirty men registered for these courses, in which instruction was given concerning the kiln-drying of local species. Although similar courses have been given to more than 300 men from all parts of the United States, this was the first time the courses were presented elsewhere than at Madison.

Of the half million strength tests made at the laboratory, a large number were on California species. At this time tests are under way which will determine the strength as a column of both green and seasoned Douglas fir timbers.

Decay in wood produces a loss which is far greater than that caused annually by fire, although, partly because it is not spectacular, far less attention has been paid to this form of waste. A present phase of the work of protecting timber against decay through preservative treatment is the assistance offered to California mine operators.

Although apparently economic conditions are not yet ripe for the extensive manufacture of paper in California, pulping tests on the woods of the state show that various grades of paper can satisfactorily be made from a number of species; and when the period for active development arrives, much information of value will be available.

California's huge fruit industry and the consequent need for packing material create an increasing demand at the laboratory for advice in the construction of boxes and crates. Fortunately, a great deal of information on this subject is already available through tests, many of which were made on California species.

A study which has created much interest in the conversion of sawdust through chemical action into a stock food, which has been found in actual feeding experiments made for short periods to have high food value, although the practical commercial development must await the conclusion of long-time tests now being carried on in cooperation with the Bureau of Animal Industry. Recent experiments have shown that the yield of convertible sugars can be increased 25 per cent, and it seems logical to look forward to further advancement. This increase in sugar is valuable also in the development of larger yields of ethyl alcohol, which may some day be one of the substitutes for present motor fuels. It has been found that 20 gallons of 95 per cent alcohol can be produced from one ton of sugar pine and that 23½ gallons of the same quality can be obtained from an equal amount of Douglas fir.

It is not only the reduction of waste in species now being extensively logged in which the laboratory is concerned. Other work deals with species of supposedly low commercial value, but often forming a good proportion of the stand in the various timbered regions. Among the more important of these in California are red fir (*Abies magnifica*), white fir (*Abies concolor*), lodgepole pine (*Pinus contorta*) and tan oak (*Quercus densiflora*); a half-dozen other species, such as Oregon myrtle (*Umbellularia californica*), of secondary importance, could also be added.

The objects of the Forest Service in promoting the use of these species through a better knowledge of their properties and the uses to which they may be put, are to reduce the drain on the fast-diminishing species and distribute it among other suitable species, to effect closer and more complete woods' utilization, to decrease waste in the production of by-products now unsaleable occurring in milling and manufacturing, and to foster the practice of forestry. Commercial uses of woods will be developed, in most cases, only when cooperation with lumber associations or other interested organizations is made available.

Work on this project will progress slowly, because of limited funds and the great number of little-used species in the United States; however, several species in California have been selected for immediate study.

The Forest Products Laboratory has dealt with other problems peculiar to California species and local conditions, but not all of these can be presented. There is available at the Madison laboratory and at the products office of the Forest Service, at San Francisco, a great fund of information on wood, obtained through tests and experiments, which is freely available to anyone interested.

CALIFORNIA FORESTRY COMMITTEE.

The California Forestry Committee was formed in the early spring of 1920, the personnel consisting of a representative each from the U. S. Forest Service, the State Forester's office, the California White and Sugar Pine Manufacturers Association, the Central Pacific Railway Company and the Division of Forestry of the University of California. The original purpose of this committee was to investigate the merits and demerits of the "light burning" theory which was causing a lively discussion.

From its inception the committee found that the "light burning" theory was not a simple nor a single idea, and that no conclusive information concerning it was available. It was decided, therefore, to conduct a practical experiment in "light burning" on some particular area. The area selected was on Moffett Creek, Siskiyou County, a few miles south of Yreka. Early in July, 1920, a forest fire had burned over an area of about fifteen sections in this vicinity, a considerable portion of which was owned by the Central Pacific Railway Company.

On October 2, 1920, Mr. B. A. McAllaster, land commissioner of the Central Pacific Railway Company, inspected this burned area, and the manner in which the fire affected the timber on certain portions of the area led him, on January 5, 1921, to write a letter to the California Forestry Committee, suggesting that the timbered portions of the Moffett Creek watershed, comprising an area of approximately 16,450 acres, would be an ideal place for the committee to initiate and carry on some light-burning experiments of its own. The committee adopted his suggestions and the consent of all the landowners within the area to be burned was obtained. Several weeks during the late spring were spent in trying to find conditions neither too dry to be dangerous nor too wet to make the expense of the operation prohibitive. Such a condition was not found.

The lack of definite results in 1921 led to a change of methods on the part of the committee and in the spring of 1922, the carrying on of the burning experiment in Moffett Creek was placed under the direct supervision of the State Forester, with the understanding that the U. S. Forest Service was to contribute help in checking up on the technical observations of the work. Assistant State Forester Rider supervised the field operations and Forest Examiner Munns had charge of the technical observations. The other members of the party were Forest Examiners Show and Dunning, and Forest Assistant Barnum of the U. S. Forest Service, and State Rangers Powers and Henry.

After spending some time checking up on the burn of 1920, it was decided to attempt to re-burn about 160 acres on the south side of Moffett Creek. Additional help was secured and a fire line built around an area of approximately 100 acres. A 100 per cent cruise was made of this area, both of the living timber and of the standing and down dead timber and data was taken of all the fire scars on the living trees. Severe thunder storms, followed by cloudy weather, prevented the burning of this area, so on June 12, another area of approximately 10 acres on an eastern slope adjoining this area was laid

out and burned, but owing to the damp condition, definite results were not obtainable. On June 13, five acres on the north slope of Moffett Creek was burned in the same manner, burning only being accomplished by spot firing. On June 13 and 14 the California Forestry Committee visited camp and after witnessing several unsatisfactory attempts to burn the areas already laid out, decided to attempt a down hill burn on an additional area on a west slope. It was decided that following this burn, the results should be checked about the middle of September, when an attempt would be made to re-burn these areas. It was also decided to lay out and burn additional areas so that a check could be made of those burned in the spring, it being the idea of some of the members of the committee that a fall burn would be less destructive to young growth.

As to the result of these decisions, an area of approximately 12 acres, just east and adjoining the camp site, was laid out and a fire line constructed around it. On June 16, at 5 a. m., this area was fired at the point of highest elevation and allowed to burn down hill the entire day and part of the following night and by 3 a. m., June 17, the entire area was burned over. In a few instances, burning cones or parts of burning logs rolled down the steep slopes, setting fire at the bottom, causing fire to run up hill. About 5 per cent of the area was burned in this manner, this burning being mostly on the extreme ends of the area, where it was much narrower than in the middle. On the morning of June 17, the fire was all dead, except for smoldering logs and snags. The fire was controlled at all times and burned very slowly, except in two cases, where fire from rolling material as mentioned, started a fire up hill, and the fire by creating a heavy draft, burned fiercely until it reached the fire line. The ground was very moist and the lower layers of litter and humus were so damp that conditions for light burning were as ideal as could be found. The north slopes burned much slower than the south slopes, owing to heavy litter and more moisture. In places, it was noted that the fire burned slowly down hill, consuming the top litter and apparently drying out the bottom layer. The bottom layer would then ignite, creating an up hill fire, which occasionally would cause a crown fire through brush and reproduction.

The month of September, 1922, witnessed one of the most severe forest fire conditions known in California and until September 30, every man in the employ of the State Board of Forestry was more than busy in handling the fire situation. This condition was terminated abruptly on October 2, by a heavy rain, the weather bureau records at Yreka showing that .45 of an inch of rain fell on October 2 and .34 of an inch on October 3, the temperature dropping from a maximum of 74 degrees on September 30 to a maximum of 55 degrees on October 1. Believing, however, that the rain would be followed by a dry spell that would make light burning possible, attempts were made to burn at different times from October 6 to October 19.

On October 16, Munns and Powers made a 100 per cent cruise of the area burned on June 16 to determine the amount of timber killed. This cruise showed that six yellow pines and four Douglas firs had been burned down, while four yellow pines and three Douglas firs had been killed standing, making a total loss of seventeen trees. These trees

varied in size from 12 inches to 36 inches, their volume being 5470 board feet for the down and 3710 board feet for the standing trees or a total of 9810 board feet for the 12 acres, an average of 765 feet per acre. This cruise showed 98 per cent of the area burned, the 2 per cent unburned being on a steep hillside covered with rock out-crop and free from litter.

In addition to cruising the large timber, Munns and Powers made an examination of a strip 26 chains long and 6½ feet wide, which had been laid out as a check strip before the area was fired in June. At the time this strip was laid out a careful count was made of all trees upon it, from six inch high seedlings to saplings six inches in diameter, and it was found to contain 737 trees, 494 of which were yellow pine, 209 cedar and the balance sugar pine, Douglas fir and Juniper. On October 16, there was found to be only 43 trees living out of the original 737 on the strip before the burning and 22 of the 43 living trees had received sufficient injury to place them in the doubtful class. Probably 11 of these 22 will not survive, this leaving only 32 trees. Of the 43 trees left on the area at the time of the examination, only two were under three feet in height, showing that only the larger trees escaped the fire.

On October 18, Munns, Powers and Rider again visited Moffett Creek and attempted to burn. A portion of the burn of 1920 on the right hand side of the creek opposite the old camp was first tried. Here the upper layer of fresh pine needles burned slowly as long as the burning was in the sunlight, but as soon as the blaze reached a shady spot it went out. Burning was then tried at the mouth of Sissel Gulch, where the Committee had burned a small area in 1920. The top surface of pine needles here burned more freely, but the lower layers of litter would not ignite. A small patch of reproduction was next fired at the mouth of Sissell Gulch, directly opposite, with the same results, except that it was noted that where even this extremely light fire came in contact with a small fir tree, with branches reaching clear to the ground, that it quickly ran up the tree, completely defoliating it. It may be possible to note next spring if the heat from this light fire had any effect on the pine reproduction through which it ran.

At the time of the visit on October 18, to Moffett Creek, an apparent increase of insect infestation on the area burned by the fire of 1920, was noted and a sugar pine 30 inches in diameter on the area burned on June 16, was found to be infested.

The conclusions of this and previous seasons, which substantially confirm the results and conclusions announced by the Forest Service in 1919, are as follows:

(1) Spring burning is dangerous because by the time the litter is sufficiently dry to burn satisfactorily the season is normally far advanced. No more rains can be counted on and smoldering logs and snags may hold fire well on into the fire season; (2) Summer burning can be kept under control, but apparently only at an expense out of proportion to the benefits obtained; (3) Fall burning is often impracticable, because while vegetation dries out slowly it may become saturated with water in a few hours. Not infrequently the most critical period of the fire season is terminated by heavy rains, after which the ground never again becomes dry enough for burning. This condition

may not be universal, but it seems sufficiently frequent to make fall burning impracticable as a generally applicable plan; (4) At any season the cost of light burning appears considerably greater than the benefits resulting; (5) Downhill burning is decidedly preferable to uphill burning, but it seems impracticable to avoid some uphill burning on large experiments and even downhill fires are not free from damage; (6) No burn yet observed failed to damage seriously reproduction. This statement includes downhill fires and second fires on lands burned off previously within two years; (7) No burn yet studied critically failed to cause damage to mature timber which was considerably larger than would be apparent to a casual observer; (8) Under conditions where light burning is at all practicable it is unnecessary,

How long will the people of California continue to feed this Moloch?
(Cartoon From Oakland Tribune)

since under such conditions protection by the ordinary methods is easy and far less expensive; (9) Under conditions where light burning seems most necessary, it is too dangerous to be practicable; (10) Light burning on large areas at one time is impossible, because the moisture conditions on slopes of different direction vary widely.

After three years of work the committee has not been able to find or to devise a fire-protective system based upon the light-burning theory which seems more practicable and economical than that already in effect on the National Forests. At a meeting held January 5, 1923, it was therefore unanimously voted to discontinue this experiment.

STATE FIRE ORGANIZATION.

The expansion of the state fire organization from four district fire rangers in 1919, when funds first became available for fire-protection work, to 27 rangers and lookout men in 1922, was brought about through the demands of the people of California for better fire protection and their willingness to cooperate with the State Board of Forestry in a financial way.

The present state fire organization would have been impossible had it been necessary to depend wholly on the appropriation of \$37,500 a year, made by the state for fire prevention. Because of this appropriation, however, financial assistance to the extent of \$22,750 was obtained from the federal government under the terms of the Weeks Law, whereby funds are available for the protection of the watersheds of navigable streams in states which make appropriations for forest protection. In addition, cooperative moneys to the extent of over \$17,000 were made available by counties and private agencies cooperating with the state in fire-prevention work.

The fire organization for the season of 1922 was as follows:

District Fire Rangers.

District.	Name.	Headquarters.
Berkeley and Contra Costa Hills	E. F. Barnes	Oakland
Butte County	C. C. Turner	Oroville
Colusa County	G. H. Leverett	Arbuckle
Eldorado and Amador Counties	George Park	Placerville
Glenn County	Glenn Gadbury	Willows
Lake County	F. L. Woodruff	Upper Lake
Mendocino County	R. E. Roach	Willits
	E. P. Biggs	Fort Bragg
Nevada County	W. F. Sharp	Nevada City
Placer County	J. E. Watts	Colfax
Riverside County	F. M. Baird	Corona
Sacramento County	J. P. Yost	Sacramento
San Bernardino County	P. Q. Harvey	San Bernardino
San Joaquin County	George Locke	Lockeford
San Luis Obispo County	J. A. Reid	Paso Robles
Santa Cruz and Santa Clara Counties	A. H. Oswald	Cupertino
Shasta County	L. E. Peterson	Redding
	G. I. Gillette	Viola
Siskiyou, Moffett Creek Area	C. H. Henry	Fort Jones
Tehama County	Andrew Schafer	Red Bluff
Tuolumne County	L. H. Holland	Sonora

Inspectors.

District Fire Rangers: A. E. Frost, O. E. Fowler.
Slash Disposal: R. E. Doney, Harry Powers.

Lookouts.

Mount Oso, Ed. Sherman; Mount Bielawski, Almon E. Smead.

FIRE SEASON OF 1922.

Until September 1st comparatively little of the fire appropriation was spent except for salaries and expenses of rangers and lookouts. Coincident with the opening of the hunting season, fires started up all over the state. From that time until the latter part of September, most of the rangers were continually on the fire line, snatching a few hours' sleep as they could. The loss of timber, range and improvements was large, but had it not been for the remarkable efforts put forth by the state and federal rangers, there would in all probability have been conflagrations in California which would have destroyed property valued at many millions of dollars. The State Board of Forestry highly commends the rangers who struggled against such overwhelming odds. The following newspaper clippings tell the fire story of the past season better than mere figures of acreage burned over and money loss sustained:

Oakland Tribune: Once more the trail of the camper has been hidden by smoke, the season of excursions into the forests has been made one of devastating fires. Earlier than usual and despite the warnings, appeals and threats, the stories come in of men who leave their camp-fires burning and of others who toss the lighted cigarette or cigar into the brush.

There is an abundant undergrowth this year, the clearings in the forest are covered with dry grass and brittle weeds. Never was the danger any greater. For those who are inclined to be careless, and as an assurance that a lesson is, at last, to be carried home, it may be said the forest guardians have increased their forces and efficiency in matter of detecting the offenders. Arrest is followed by punishment, swift and effective. The man who leaves so much as a single glowing ember on a camp scene he is about to desert is taking the chance of a jail sentence and heavy fine.

Visalia Times: Of course, it becomes wearying to the constant reader of newspapers to be confronted so often about this time of the year with warnings and cautious and local and editorial matter urging carefulness with fire in camping localities and elsewhere; but it is no more tiring to the reader than it is to the fellow who feels it incumbent upon himself to write such stuff.

The writer watched, at times for a period covering ten days, in the southern part of the state, the destruction of 75 square miles of timber and underbrush, to the great and apparently irreparable damage to the watershed of that portion of the San Bernardino Mountains supplying several counties with water for domestic and for irrigation use. It is a pitiable sight and one that generally might be avoided, to peer through night after night at the blazing pines on the distant mountain sides, to sniff the expensive smoke miles away, and later to traverse the blackened, fire-denuded areas of the upper altitudes that erstwhile attracted, collected, and distributed equitably for life-giving moisture to the sun-kissed valleys below, and to ruminate on the diminishing effect of such fires—practically all preventable with application of common sense and care and thoughtfulness—are certain to have upon the water supply.

The scattered and charred trunks of trees here and there remaining on the scene of outraged Nature are monuments to man's recklessness, his disinclination to help save the blessings that have been freely bestowed upon him by Providence. And not only does the forest in the upper reaches of this country drive a shattering blow at irrigation and domestic water supply; but denudation of those slopes of trees and underbrush and grasses also removes Nature's barrier against floods that would rush destructively down into the rich valleys below.

Yes, it's an old story—"Be careful of fire." "Help save the forests," etc., but each succeeding year—although signs now and then appear that strict and stricter laws, better enforcement and closer and more systematic guarding are somewhat lessening the carelessness-produced fire losses—it must be told and iterated and reiterated, woven into public speech and worked into an anthem; with ever-retained patience like that needed in the training of a child, with "precept upon precept, and line upon line."

Stockton Record: It is doubtful if, even with constant repetition, the people and especially those responsible for forest fires, realize how much in dollars and cents these annual conflagrations cost. The destruction of forests, stock and pasturage is almost inestimable. But when told that it cost the government \$20,000 to

fight the flames in the California National Forest this year, one of the most serious forest fires in Northern California in a quarter of a century, figures begin to talk.

Five hundred men under the direction of forest rangers fought the roaring flames ten days. One hundred men are still guarding the smouldering ruins in places and the fire can not be considered wholly out until rains come. The flames wrought their havoc on an area of forty by fifty miles, taking everything in their way. In addition to the money cost, there is the tremendous expenditure of human energy, the risk to life of those fighting flames surrounded by terrific heat, besides the danger to all life in the path of the fire.

When one considers how frequent are these devastating holocausts of the woods, the wonder is to the summer visitor that there is as much verdure left in the mountains as there is.

One thing is certain, if a single individual owned city or country property worth as much as these forests, he would be terribly careful in everything he did not to start a fire that would cost him \$20,000 for 500 fighters who must work several weeks to quench the flames without saving anything. And if this thing happened every year, without insurance he would shortly be a bankrupt. Yet that multiplied many times is exactly what happens to the state of California, and to the national government, which means that irresponsible persons set the fires on their own property and that all of us have to pay for putting them out.

Ukiah Republican Press: One of the worst conflagrations that ever visited Ukiah called out the entire populace of the town last Wednesday when burning pine cones from the back fire set by the fire wardens Tuesday evening, fell in the southern outskirts of the city completely wiping out the farm buildings on the Gobbi ranch as well as all of the fencing in the path of the flames. The ranch as it stands desolated today is stripped of every sign of human habitation, not a stick of fencing or a wall remaining after the ravages of the fire which laid low the Gobbi residence, a small prune dryer and several hundred trays, a small winery adjoining the house, woodsheds and the big winery leased to the California Grape Products Company and filled with 30,000 grape boxes and several thousand dollars worth of farm machinery and huge wine tanks. From the Gobbi property the flames leaped across the street to the residence of Mr. and Mrs. Wm. H. Sharpe from which the occupants escaped with only the clothes they wore. At the same time flames burst from a barn on the Hughes property and another barn at the home of Ira Fisher caught fire. Both were consumed with their contents, which in the Fisher case included about five tons of hay, some garden implements and several dozen chickens.

By this time the entire business section of the city was closed and men, women and children aided in fighting the flames with wet sacks. The Ukiah fire department stood by until late into the night, giving valuable aid. During the intense heat of the fire, flames burst out in many sections of the district but were promptly subdued by vigilant watchers. At the home of Charles Kasch the flames crept almost to the very door, and the fencing at the home of Judge Preston, across the street, caught fire repeatedly, while roofs and dry areas covered with grass were in flames many times from the burning cinders and cones. A shift in the wind from the west to the southwest is all that saved that section of the city from total destruction. No estimate has been made of the damage but it is known it will run into many thousands of dollars. A pathetic incident in connection with the fire was the partial destruction of the bicycles of three boy scouts, Thomas Anker, and Jack and Wakefield Taylor, who left their wheels in what they considered comparative safety, while they aided in fighting the fire. When they returned the whole area was in flames and the bicycles badly burned.

In spite of the intense heat there were no prostrations. A. Perelli-Minnetti estimated the loss to the California Grape Products Company at \$15,000. The fire is still burning to the south of the city where it menaced many ranches the last of the week. The roar of the flames could be heard day and night and, coupled with the intense heat and the heavy smoke curtain, created a scene of the utmost depression. While it is hard to get reports of the damage to the hill residents, it is known that the Evans ranch on Pine Ridge, recently sold to a family whose names could not be learned, had been wiped out. The new owners had completely refurnished the ranch and lost everything. It is expected many more catastrophes will be reported when the fire has subsided.

San Luis Obispo Tribune: That many deer and hundreds of quail and doves have been literally roasted alive by the fire raging in the Santa Margarita section, was the report of Augustin Estudillo, who was in town yesterday from his ranch near Santa Margarita.

Mr. Estudillo's ranch was completely circled by the fire, but hard work on the part of the fire fighters saved the place.

He had occasion to walk near the fire line the other day and found a young fawn which had been terribly burned by the flames. He picked the little creature up and dressed its burns, but it did not survive.

He states that hundreds of quail have been caught in between two branches of the fire, and in flying over the flames in an effort to escape have been burned to death. Many doves have also been burned to death, and several deer are known to have perished.

Placerville Mountain Democrat: The fire that started on the Butler place, near El Dorado, was practically extinguished after ending on the S. O. ranch, says the correspondent to the Bee.

A barn on the E. A. Bowker ranch was saved by the heroic efforts of Supervisor W. S. Biggs and crew of men, by tearing the burning shakes from the roof. The barn was full of hay. Another barn and stable were burned. A house occupied by Tim Franklin on the J. I. Martin farm, caught fire nine times, but was finally saved.

Only by back-firing was the town of El Dorado saved from being wiped out. The Western States Gas and Electric power line was guarded by their own employees, who early learned of the conflagration by phone, and the fire was kept from the Company's high tension power line by a narrow margin. Every able-bodied man, under Fire Warden Roy M. Marks, James Davidson, and Supervisor Biggs, fought like demons.

Many women helped, giving drinks and refreshments to the fighters. About 2,000 acres were burned over and a lot of dry feed destroyed. Those burned over were the Butler, J. C. Forni, A. E. Bowker, Joseph Windle and S. C. Dunlap, J. J. Martin and Roy ranches.

Fresno Republican: The fire which started Sunday noon near Terra Loma and burned over an area of 10,000 acres, including 320 acres of grain, was the worst in ten years, according to ranchers who returned from the district today.

Three hundred and twenty acres was in grain which was to be used as feed, while the remainder was alfalfa grass, which is very valuable to the cattlemen. C. F. Fuller says it was worth five dollars an acre as feed. It is seven years since the feed has been good on the plains. This year it was very heavy, averaging over two feet deep.

When the fire started in this deep grass it developed intense heat and drove the fighters back. The wind changed directions several times, surrounding the fighters and endangering their lives. They became separated in the darkness and heavy smoke and several times were in grave danger. Lack of drinking water increased their hardships.

The only method of fighting was with shovels and loose dirt. Wet barley sacks only served to spread the flames, which would frequently jump one hundred feet at a time. When daylight came a tractor was used to plow a fire guard and then back-firing was needed. The wind changed in the forenoon and the fire spread back into the hills where it is still burning.

Among those who were heavy losers were: C. F. Fuller, who lost 3320 acres; Pete Bardeau, 3000 acres; Elsworthy and Goni, 1920 acres; O. Johns, 320 acres; John Jones, 320 acres.

The Terra Loma schoolhouse was in danger at one time, but was saved by the fighters. However, the school shed was burned. Several homesteaders' houses were burned.

Sacramento Bee: Ranchers in this vicinity were endeavoring today to check up their losses in one of the most disastrous grain-field fires in the history of the county, which yesterday burned for ten hours over an area nine miles long and approximately one mile wide. A huge charred expanse of ashes remained today where there were acres of golden grain or piles of sacked wheat.

The fire started shortly before noon yesterday on the Feeney ranch, eight miles west of here. Back-fire from a motor truck is believed responsible. There was only stubble on the Feeney ranch, but the crackling fire swept over the ground swiftly to other properties where there was standing grain.

Over the O'Brien, Gurry, French, Payton Bros., Prentice, Brunnell, McDaniel, Compton and Green ranches the flames coursed, resisting all efforts to check it until it struck the Marshall ranch, where it was extinguished at 9 o'clock last night, after hundreds of men had gathered to head it off.

District Fire Ranger Glenn Gadbury, who assumed charge of the fire fighting, came to Willows at sundown to obtain every possible man to assist. Many joined the army of ranchers that had been battling the blaze through the afternoon.

Miles of fences were destroyed by the fire. The heaviest individual loser is believed to be Fred Mason of Willows, who leased the Gurry French place. He

had 200 acres of standing wheat, 300 acres of barley, 1,500 bags of threshed wheat, an oil wagon and a tank in the path of the flames, all destroyed. Payton Brothers lost 300 acres of uncut grain. Others had not estimated their loss as yet.

Sacramento Bee: After a night without electric lights, Yreka and other Siskiyou County towns today faced the prospect of another night in darkness, as word reached here that the brush fire which yesterday cut the power line of the California-Oregon Power Company, is menacing the temporary line erected by the concern today.

Sweeping through the hills at the rate of a mile an hour, the fire is declared beyond control and the fire fighters being rushed to the scene by the power concern and the Sheriff of Siskiyou County are directing their efforts toward the widening of the path of the flames. Shortly before noon today sparks from the original blaze started a second fire some distance away, and this had the effect of dividing the force of fire fighters. Responsibility for the fire is being placed on a group of Southern Pacific section hands who were burning old railroad ties yesterday afternoon near Charall. The burning ties ignited dry grass at about 5.30 o'clock and the flames quickly swept up the slope of the foothills of Black Mountain, finding ready fuel in the dry brush. Poles of the California-Oregon Power Company's lines were in the path of the fire and these were destroyed for a distance of a mile and a half, cutting off the electricity supply in this vicinity.

Reports today were that the fire had already covered seven miles and was still sweeping in a northwesterly direction toward the Copco Dam in the Ager Basin. Lines of the Pacific Telephone and Telegraph Company are endangered.

No houses or cattle are in the path of the blaze and beyond the destruction of the power and telephone lines, there is not likely to be any property damage. There is also no timber in the neighborhood of the blaze. One hundred men were at the scene of the fire this morning. The pall of smoke from the fire partly obscured the sun.

Ventura Post: Burned while helping to fight fire on the Cuesta grade above San Luis Obispo, James Gerhard, formerly a clerk in the De Leon Hotel, lies at the point of death at San Luis.

Gerhard, in company with a group of other young men, went out on the grade where a fierce brush fire was raging and attempted to battle with the flames. The men were driven back and all of them gave up the unequal fight with the exception of Gerhard, who made an attempt to get to some rangers working a distance away. He found himself entirely surrounded by fire and became panicky for a time, rushing to break out of the ring of fire around him. He was caught in the flames and his face and body badly burned.

He was rescued nearly unconscious by other fire fighters and was taken to the nearest medical aid.

Gerhard was employed in the DeLeon hotel as a clerk about ten years ago.

Los Angeles Times: A survey completed yesterday by Supervisor Charlton shows that more than 500 men, all active firefighters, were engaged in the job of extinguishing the flames that started in the rear of the hospital, at the Arrowhead Hotel, in the Federal forest reserve a few days ago. The cost to the government will be more than \$25,000 for help alone.

There were eighteen sections of land burned over, or 11,520 acres. In addition some of the best timber on the local reserve, especially that on the Rim of the World drive, was destroyed. The money loss from that source cannot be computed at this time.

Leaving the Arrowhead Hospital the fire ate its way toward City Creek, thence to lower Waterman Canyon, and from there to the 101-mile drive at the Rim of the World, when it jumped to Allison's ranch, then to the north side of the mountains to Hook Creek. The blaze did not reach Little Bear Valley.

In spite of the hundreds of men on the fire line the blaze was making steady progress until the coming of the rain, followed later by two inches of snow, covering the entire region. The fire was the only one of any consequence during the entire season.

A most effective piece of cooperative fire protection work was carried out the past summer in the Contra Costa Hills, where there are some of the most extensive and important forest plantations in the country. These plantations are extremely important from a watershed standpoint, since the water which supplies the east bay cities largely comes from the area which they cover. The character of the protective system which was installed under the general direction of the State Forester is described in the following article:

Planted forest on the Contra Costa Hills, from which water is stored for the East Bay cities at their feet.

Planted forest near Redwood Canyon, Contra Costa Hills, which is being protected from fire by the state fire organization.

THE CONTRA COSTA HILLS FIRE PREVENTION.

BY PAUL I. DANIELS, Land Agent, East Bay Water Company.

Not more than fifteen years ago the hills lying along the easterly portions of the cities of Oakland and Berkeley were not as now covered with groves of forest trees, but were practically bare on the western slope and very sparsely dotted with oaks on the eastern side. At that time the only visible mantle to the hills was the wild grass, green and beautiful in the winter, but rather mountainous in the summer when dry and brown.

During the time previous to the planting of trees, grass fires were of common occurrence during the summer months and little heed was given the matter excepting by the people depending on the grass for cattle feed. To them the fires were a great loss then as now, many times forcing the owners of cattle to dispose of their stock at a great sacrifice owing to the feed being destroyed by fire.

During the year 1910 work was commenced on a general scheme of forest planting on Contra Costa Hills. A great amount of money and labor was expended on the project. The results are quite apparent today. It is doubtful if there is any one who has looked at the condition of the hills without the forest and now, would care to see the old condition return, yet there is always a chance that just such a thing may happen if proper precautions are not taken to guard these wooded sections from the three great destroyers of forest, namely, Fire, Disease and destructive Insects. Of the three, fire is the most destructive if not properly guarded against.

Disastrous forest fires are generally the result of carelessness on the part of some person and easily prevented by a little care and thought on the part of those traveling through the dry hills or forest. A fire once started may easily get out of control and cause irreparable damage. Pine trees badly scorched are gone forever; some other trees such as the eucalyptus may recover, but it takes a long time for them to do so.

The increasing amount of automobile and foot travel through the Contra Costa Hills over the scenic boulevards and trails has multiplied many times the danger from fire.

As a result of the fire along the Tunnel Road during the summer of 1921 when approximately two-fifths of the pine trees plantationing that section was toally destroyed, the matter of protecting these plantations on the hills was taken up in a co-operative way by the Forestry Department of the University of California, the East Bay Water Company and the City of Oakland, and the City of Berkeley, together with the cooperation of the California State Board of Forestry, with the result that a fund of \$2,000 was provided, a plan formed and a preliminary organization was put in the field June 1, 1922. This organization is under the general direction of State Forester M. B. Pratt, who is in charge of fire fighting operations. From funds provided six large steel boxes equipped with tools for fire fighting were purchased. These boxes were placed at the following locations:

- 1—At the north end of Spruce Street in front of Summit Reservoir, East Bay Water Company.
- 2—In Telegraph Canyon (Claremont Canyon) about one-half mile above Claremont Hotel.
- 3—At the west end of Inter-County Tunnel on the Tunnel Road.
- 4—At Observation Point on the Skyline Boulevard between Tunnel Road and Thornhill.
- 5—At junction of new Skyline Boulevard extension and the Snake Road.
- 6—On Joaquin Miller road opposite office of Joaquin Miller Acres.

Other boxes equipped with proper tools will be added as soon as funds are available to purchase same.

The boxes contain shovels, rakes, hoes, axes, lanterns and water bags. This equipment is to be used for fire fighting purposes only. Each box is labeled "California State Board of Forestry. In Case of Fire Telephone Lakeside 585." Deputy State fire wardens have been appointed by the State Board of Forestry as shown on pages ten and eleven. Other deputy state fire wardens are to be added as the case demands.

The deputy state fire wardens take charge of all fires in their districts and have authority to requisition aid of any able bodied citizen between the ages of 18 and

50 to assist in putting out fires in any district outside of incorporated cities. Any person capable of performing such duties who refuses to comply is subject to arrest and fine.

A meeting was called on the evening of July 13, by the Contra Costa Hills Club in the Assembly Hall of the Oakland Tribune. At this meeting the matter was discussed of enlarging the organization and facilities for fire prevention. A temporary committee was appointed for the purpose of getting together those most vitally interested in the prevention of fires in the Contra Costa Hills.

On July 18, the temporary committee and representatives from various organizations, corporations and municipalities in the Eastbay district were present. At this meeting a resolution was adopted making the temporary committee, together with the representative present, a permanent committee to be known as the Contra Costa Hills Fire Protection Committee.

The interests represented at this committee meeting were as follows: The cities of Oakland, Berkeley, Albany, Alameda, and Piedmont by their fire departments; the Oakland and Berkeley park departments; the University of California by the Forestry department; the State Board of Forestry by the State Forester; the Oakland Chamber of Commerce; the Berkeley Chamber of Commerce; the Contra Costa Hills Club; the East Bay Water Company; the Oakland Traction Company; the San Francisco-Sacramento Railway; Oakland Real Estate Board; Automobile Dealers' Association; East Bay Safety Council, and the Berkeley Boy Scouts by the Scoutmaster.

At the present time there is a great need for funds to carry on the work and for the purchase of additional equipment for protecting the hills and tree plantations. The money for the purchase of the equipment to date and for the salary of the District Fire Ranger was provided by the East Bay Water Company, the City of Oakland, City of Berkeley, the University of California and California State Board of Forestry.

To properly carry on the work as planned, an additional sum of \$5,000 is required. Of this sum \$1,000 has been contributed up to July 24. The money collected is to be used for fire prevention and control only. No salaries or fees are to be distributed to members of the committee. Funds are to be deposited in a bank selected by the committee, such account to stand in the name of Contra Costa Hills Fire Protection Committee. All bills or expenses in connection with the prevention and control of fires in the Contra Costa Hills which may come under the direction of this committee are to be referred to the District Fire Ranger for approval of same. The signatures of two of a finance committee of five are required for the withdrawal of funds.

The importance of properly protecting the Contra Costa Hills forest areas can not be overestimated as this forest area is the largest and best plantation of its kind in the State of California and its loss would be keenly felt by all of the Eastbay community.

At the California state primary election on August 29, 1922, the City of Oakland presents the proposition of voting bonds for the purchase of some 1500 acres of the best of the forest section for the purpose of a public park by the City of Oakland. It is therefore especially important that every measure of protection be afforded the forests now and in the future so that this area may be a lasting attraction and source of enjoyment to the residents of the Eastbay districts.

For the present, build no fires in the hills. Smokers, be careful where you throw burning tobacco. Do not burn rubbish without clearing grass area around the fire. Do not burn grass off the hills without permit from fire department, and then only with some one in charge who is experienced in such matters.

"Save The Trees."

FIRE LOOKOUT STATIONS.

Mount Bielawski Lookout.

The fire lookout tower on Mount Bielawski, the highest point on the Castle Rock ridge between Santa Clara and Santa Cruz counties, is the first structure of its kind which has been erected through the efforts of the State Board of Forestry. This 60-foot steel tower, and the 18 miles of telephone line connecting it with the California Redwood Park in Big Basin, was made possible through financial cooperation extended by Santa Cruz, Santa Clara and San Mateo counties, the State Highway Commission and the California Redwood Park Commission. There is also a connection with the Los Gatos telephone line which was made by a three-mile line built by local ranchers in co-operation with the State Board of Forestry.

The telephone line to the California Redwood Park was constructed and the lookout tower erected by state rangers under the supervision of Inspector Frost, State Board of Forestry. On July 2, 1922, the tower was dedicated. The following account of the exercises appeared in the Santa Cruz *Sentinel*:

Sunday afternoon before an assembly of about 250 people on Mount Bielawski, a new 60-foot steel tower was dedicated.

The ceremonies were simple but impressive. Mr. Sanders, the well-known public-spirited citizen of Saratoga, was master of ceremonies. There were also present a large number of people from the surrounding districts in Santa Cruz and Santa Clara counties.

At the command of Mr. Sanders, the Santa Cruz Boy Scout Troop No. 3 opened the ceremonies, Scout G. Penniman sounding the bugle call, immediately following which the flag was raised by Scout Donald Rogers, the other Scouts forming a hollow square. No sooner had Old Glory reached the new high point than Scout J. Sowder, who by then had perched himself well up in the tower, wig-wagged the following message to the people and the rest of the Scouts assembled below:

"We dedicate this tower to the conservation of our Santa Cruz forests, which we have learned to love for the beauty, the joy and the wealth they give us."

State Forester M. B. Pratt was next introduced. He made some very interesting and prophetic remarks on the usefulness of this fire lookout station system, which his office will establish in this state. This being the first one of these projects, Santa Cruz County may consider itself fortunate and honored. He explained how this tower was made possible by the co-operation of the three counties of Santa Cruz, Santa Clara and San Mateo. He praised the foresightedness of the supervisors in these three counties. Henceforth the state will assume full control of that tower, keeping there a constant guard. The tower is connected by means of a telephone line to the outside world. Mr. Smead, a local resident, will act as guard. Mr. Pratt made special mention of the generosity of Mrs. Smead, who turned over to the state a 99-year lease at \$1 per year to over an acre of ground.

State Senator Jones followed, giving a very interesting review of the history of the conservation movement in the Santa Cruz Mountains. How the necessary appropriations were secured from the state for what was up to last year the only state-owned park. Mr. Jones made the interesting remark that within 50 miles of this state redwood park was found one-third the population of the state. This valuable asset, he stated, is worthy of the best care that could be bestowed upon it.

Chairman Rostrom of the Santa Cruz board of supervisors expressed his warm appreciation over what had been done. He mentioned the fact that in previous years it had always been very difficult to secure exact information as to the location of fires; that this system just established would undoubtedly give some much needed information and would therefore be a valuable asset.

Mount Oso Lookout.

The Mount Oso Lookout was established in July, 1921, to render assistance to the Stockmen's Protective Association of Alameda and San Joaquin counties in the more efficient protection of stock range from fire. It is located on a commanding peak near the junction of Alameda, Santa Clara and Stanislaus counties, and overlooks approximately three million acres. Connections were made with the main telephone line at Westley by the construction of a 12½-mile telephone line. Cooperative funds for this project were obtained from Alameda, Santa Clara and Stanislaus counties, and considerable labor and material for the lookout tower were contributed by the Stockmen's Protective Association. Following is an account of the fire protection activities of this association the past year by Mr. John J. Callaghan, secretary:

It pleases me to state that the area burned over by field fires in Alameda and San Joaquin counties in 1922 was less than that of any year since the association was organized on May 4, 1904, although population and fire-burning devices have increased greatly. We especially appreciate the cooperation of the State Forester and his predecessors in office for their friendly advice and assistance. Other agencies have assisted, as I will outline now.

Among these are the boards of supervisors of Alameda, San Joaquin and Santa Clara counties, who at different times appointed patrolmen paid by the county and generally nominated by the association. The last mentioned county on June 5 last, on our petition, appointed mounted fire patrolmen for the Mount Hamilton and Gilroy mountain district following the plan now in force in Alameda and San Joaquin counties. Battery C, 143d Field Artillery, National Guard of California, with mount station at Livermore, many of whose members belong to the Alameda County Fire Patrol Station at Livermore, through its officers has tendered us the use of men and equipment in cases of emergency, but the most valuable assistance, to my mind, is rendered by the lookout stations on Crane Ridge, 25 miles southwest of Livermore, and on Mount Oso, Stanislaus County, the former at an elevation of 2500 feet, the latter 3383 feet above sea level.

Mount Oso Station was installed by the State Board of Forestry, in the summer of 1921, under the direction of Inspector A. E. Frost of the State Forestry Service. It is connected by telephone with Westley in San Joaquin Valley and other exchanges so that fire warnings may be sent to any quarter needed. I believe that a similar equipment on Mount Diablo, and Mount Tamalpais, together with the splendid station at Lick Observatory on Mount Hamilton, would complete a very efficient signal system covering most of central California, and occasion may arise that, in time, it may become part of the national defense. From personal knowledge I can say that the State Board of Forestry and the State Forester's office made considerable sacrifice in establishing this lookout under serious difficulties, both of climate and labor, and the station should be supported in every respect by the farmer and stockmen of surrounding counties.

Sign along state highway from Los Gatos to Santa Cruz which reads, "Due to carelessness, this area devastated by fire last year. Help protect your state from fire. California State Board of Forestry."

Tool box on Tunnel Road, Alameda County, which was a factor in keeping down fires last summer in the plantations in the Contra Costa Hills.

SPECIAL FIRE APPROPRIATIONS.

A number of special fire appropriations for the biennial period were made by the last legislature for the protection of watershed areas, the funds appropriated to be spent under the direction of the State Forester. These appropriations were made contingent upon equal amounts being expended by various agencies such as fruit exchanges and water companies which derive the direct benefit of such protection.

SAN BERNARDINO MOUNTAINS—\$5,000.

This appropriation is being handled through the Supervisor of the Angeles National Forest. The San Bernardino Mountains are fairly easy of access by a large population which comes to a large extent from Los Angeles. The brush cover is exceedingly heavy and the fire danger great. The water coming from these mountains is perhaps the most intensively used of any water in the state. It is not only used in San Bernardino County, where the mountains are located, but also in Riverside and Orange counties. The great need of this region is for trails and the state appropriation is being spent chiefly for that purpose. In 1921 the state funds were used to construct 8.5 miles of new trails, repair 40.9 miles of old trails, clear two acres for camp sites, develop two springs, construct five concrete fireplaces, and build eight camp tables with benches attached.

SAN GABRIEL CANYON—\$1,400.

This appropriation was handled by the Supervisor of the Angeles National Forest, who used it to employ a patrolman, to construct 1.5 miles of new trails and repair 33.4 miles of old trails. In the San Bernardino Mountains much trail repair work was necessary, since the heavy rains of the previous winter caused much gullying, and in some places landslides had completely blocked them. This necessitated the upkeep of the main traveled trails, which are all-important as a means of travel and communication during times of fire.

SAN DIMAS CANYON—\$3,000.

With this appropriation, a patrolman for the canyon was employed by the Supervisor of the Angeles National Forest, six latrines constructed for the San Dimas Canyon camps, 1.3 miles of new trails constructed, and 10.9 miles of old trails repaired. The water supply from this canyon is very valuable, and is intensively used by the San Dimas citrus region.

SAN ANTONIO CANYON—\$5,000.

The Supervisor of the Angeles National Forest used this appropriation to employ a patrolman for the canyon, construct 3.3 miles of new trails, repair 14.4 miles of old trails, repair Baldy Lookout house and clean up San Antonio Canyon public camp.

LOS ANGELES COUNTY—\$20,000.

This appropriation is being handled through Mr. Stuart J. Flintham, County Forester, who made the following report on the work done with state and county funds for the fiscal year 1921-1922:

North Tuna Canyon firebreak, 8.75 miles.....	\$3,652 44
South Tuna Canyon firebreak, 3.17 miles.....	1,775 38
Verdugo Peak firebreak..... .70 miles.....	190 51
Verdugo Hills trails..... 2.62 miles.....	454 63
Dry Canyon firebreak..... 5.37 miles.....	2,156 62
Calabajas Peak firebreak..... 3.00 miles.....	1,493 00
Saddle Peak firebreak..... 5.25 miles.....	3,725 49
Malibu Range trails..... 1.62 miles.....	196 50
Santa Monica Mountains firebreak, maintenance.....	414 00
Administration	1,722 88
Tools, equipment, etc.....	235 38
Outfit	1,108 28
Cook house	1,947 08
Camp expense	926 94
Total cost.....	\$19,999 13

The firebreak and trail work done in Los Angeles County is but one phase of the work being done through the county forester. A splendid example of what can be done by a county forestry organization is given in the following report by County Forester Flintham, for the fiscal year 1921-22, to the board of supervisors of Los Angeles County:

The Forestry department is charged with the forest and conservation interests and with fire and game protection in Los Angeles County, the County Forester holding appointments also as county fire warden and county game warden.

It is the duty of this department to establish, maintain and protect shade and ornamental trees along the public roads and highways and trimming of roadside trees is undertaken to improve highway tree growth. More than 7500 trees have been trimmed by the department along county roads during the past fiscal year. All cutting, trimming or removal of roadside trees by property owners or public service corporations is under regulation through application and permit. More than 200 miles of uniform roadside tree planting has been established and is under continued care and maintenance.

The department develops and maintains county parks and the grounds around county institutions, the most extensive of which is at the Olive View Sanatorium. Here the grounds have been laid out and developed with planting of lawns, trees and shrubbery, and more than 10,000 trees a year are being planted in the hills back of the sanatorium buildings. Monte Vista Park in the Crescenta Valley has been improving as a play-ground, but the park is hardly large enough to accommodate the heavy increase of visitors and picnic parties. Additional ovens, picnic tables, swings, etc., have been installed and a modern comfort station has been installed for the convenience of visitors.

Large nurseries are operated where hardy coniferous trees are grown on an extensive scale for reforestation planting in the mountains, as well as nursery stock of every kind for other planting work which the department has in charge. Over half a million forest seedlings are now being raised in the reforestation nursery in Altadena and forest plantings are being established year by year at important points on burned-over areas of our mountain water-sheds. The department has engaged in extensive seed collection all over southern California to secure forest trees seeds in sufficient quantity for the needs of the reforestation nursery.

The protection of wild game throughout the county in accordance with the provisions of the state game laws is enforced by the department through the large force of deputy game wardens located in every part of the county. Special forces of wardens have been on duty through the open hunting seasons so that check can be kept on hunters and the amount of game taken. Many valuable game specimens secured by the department have been added to the collections of the Los Angeles

county museum. A larger planting of fish fry obtained from the state fish hatcheries has been secured to improve the fishing in the various flowing streams in the county. During the fiscal year, 74 arrests have been made for various violations of the game laws, which have resulted in 71 convictions and the levying of fines amounted to over \$1,500.

Substantial progress has been made in developing an effective fire-fighting organization in every part of the county during the past two years since the work of fire prevention and control was taken over by this department July 1, 1920. The county has been divided into 150 fire districts with a local deputy fire warden in charge of fire protection work in each district. Extension of telephone lines has been secured to bring this fire warden organization into prompt telephone communication with the county fire warden. Many fire districts have been equipped with fire-fighting trailers under a plan of financial cooperation with the county. Fire boxes furnished with emergency fire-fighting equipment have also been constructed and located at strategic points through mountain districts so that fire-fighting tools are available where they are needed.

During the height of the fire season, special auto fire patrol was maintained over holidays and week-ends, when large numbers of people were camping and visiting in the mountains, wardens were stationed at fire lookout points, and a force of riders employed in cooperation with large land owners was put on duty in the hills. Through periods of special fire danger an aeroplane fire patrol was inaugurated which was most successful in detecting and locating fires and permitting quick measures for their control.

Active fire-fighting companies have been organized in many districts under direction of local fire wardens and through the cooperation of the department, local fire departments, in charge of a deputy fire warden, acting as the local fire chief, have been organized in a dozen unincorporated communities, most of which have purchased and installed automobile fire engines and other essential equipment.

Since a large portion of our mountain water-sheds lie within the Angeles and Santa Barbara National Forests, the department has joined with the Forest Service administration on every large fire. Similar cooperation has been arranged with the Los Angeles city fire department and with other large cities of the county for prevention and control of fires where city and county territory join. To enable the department to deal effectively with fires spreading from adjoining counties, Los Angeles County has been made a state fire district and the county fire warden has been appointed state fire ranger for the district. Fire assistants have been appointed as state fire wardens.

Construction of a comprehensive system of fire-break lines for fire control through the mountainous sections of the county is in progress, and nearly 50 miles of such fire-breaks have already been built. Besides the 20-mile firebreak down the main ridge of the Santa Monica mountains, which was built in cooperation with the land owners in this section, about 27 miles of firebreak in the Verdugo Hills and the Malibu range were constructed the past winter under joint appropriation between this county and the state. A total of \$40,000 is being expended by state and county through a two-year period on this work, and surveys have been made to extend this firebreak system to completion through the Verdugo Hills and the Malibu range this coming winter. Construction of about 15 miles of lateral firebreak not provided for under the state and county appropriation has been arranged in cooperation between the county and interested land owners.

The fire menace from brush burning has been materially reduced by the operation of the county fire ordinance regulating under permit the use of fire for clearing land. Over 5000 burning permits have been issued during the year by deputy fire wardens and where 65 per cent of the total area burned over in the previous fiscal year resulted from careless brush burning, this percentage has been reduced to about 33 per cent during the present fiscal year. A further important fire ordinance has been enacted during the year which materially strengthens the authority of the county fire warden for the prevention of fires.

During the year ending June 30, 1922, the department responded to 281 fire calls in county territory and to 44 further calls from fires originating either in incorporated area or within the National Forests which threatened county territory adjoining. As a result of the effective fire warden organization of the county, 45 per cent of fires were checked after burning less than an acre and an additional 35 per cent burnt off less than ten acres. Record of damage in county territory which

can be expressed in terms of money, while undoubtedly incomplete, shows a fire loss of \$522,623 during the year.

The department has investigated to determine responsibility for all fires during the year and as a result 60 arrests were made for violation of state and county fire laws, from which 52 convictions have resulted.

TAMALPAIS FOREST FIRE DISTRICT—\$10,000.

This appropriation was handled by the board of directors of the Tamalpais Forest Fire District, which embraces about 75,000 acres in Marin County. The act providing for this district defines a region in the vicinity of Mount Tamalpais, in which all the taxable property is assessed for fire protection purposes. In this way about \$9,000 is raised every year which is used, together with state funds, for the employment of patrolmen and the clearing and construction of fire breaks. The following reports by Mr. E. B. Gardner, chief warden of the district, gives the work accomplished during the past two years with district and state funds:

	1921	1922
New trails cut -----	7,181 feet \$ 430 86	19,342 feet \$ 852 16
Old trails cleaned -----	37,757 feet 1,410 28	49,568 feet 2,363 53
Brush burning on trails -----	180 00	-----
Tools -----	166 96	261 64
Patrolling (5 patrolmen) -----	6,834 00	5,746 20
Chief warden -----	2,160 00	1,980 00
Fire fighting -----	713 70	243 60
General expense -----	510 74	596 04
Totals -----	\$12,406 54	\$12,043 17

FIRE REPORTS FOR 1921 AND 1922.

The fire seasons of 1921 and 1922 were very severe in character. During both years the early rainfall was below normal over the greater portion of the state, and the temperature was very high. There was also a long period during each summer when there was absolutely no rainfall, and this situation was aggravated by high winds which made it extremely difficult to control fires. To the adverse climatic conditions was added a much greater human risk, due to greatly increased automobile travel, which brought a vast number of tourists, campers, hunters and fishermen into the remote regions of the state.

The fire losses on the areas protected in 1922 by the state fire organization were \$732,994 as compared to \$988,597 in 1921. A substantial reduction in the fire loss over that of the previous year was accomplished by the increased efficiency of the ranger force, and not because of a lessened fire hazard, which was especially severe in September. At the same time it is very evident that both federal and state fire organizations must be strengthened, since the fire hazard is constantly growing worse. The history of the disastrous fires that have occurred at different times in Minnesota, Idaho and Oregon can be repeated in California, if we do not use more stringent preventive methods. The potentialities are here for a combination of weather conditions, when appearing in conjunction with a fire situation as critical as existed in September, that will bring disaster and ruin on the whole community that may be unfortunate enough to be hit.

A great conflagration is apt to take place in the forests of California any year, unless civilization makes conditions safer. Thus far, civilization has worked to aggravate the situation.

Comparative Damages by Fires, 1921-1922.

Year	Number of fires	Average burned	Damage	Average acreage per fire	Average damage per fire
1921 -----	1359	551,777	\$988,597 00	406.	\$727 00
1922 -----	1171	369,071	732,994 00	315.	626 00

Types of Land Burned Over (Acres).

	1921	1922
Timber -----	20,313	57,431
Brush -----	206,362	140,820
Grass -----	301,438	153,205
Grain -----	23,664	17,615
Totals -----	551,777	369,071

Types of Classified Damages.

	1921	1922
Timber -----	\$ 41,528 00	\$120,356 00
Range -----	367,246 00	172,866 00
Grain -----	310,025 00	233,408 00
Improvements -----	189,735 00	166,892 00
Stacked hay -----	80,063 00	39,472 00
Totals -----	\$988,597 00	\$732,994 00

Causes of Fires.

	1921	1922
Lightning -----	12	14
Lumbering -----	9	27
Railroads -----	41	55
Brush burning -----	178	165
Campers -----	374	163
Tobacco -----	---	175

*Miscellaneous -----	311	193
Unknown -----	328	269
Totals -----	1359	1171

*Includes fires set in grain fields by sparks from machinery.

LAW ENFORCEMENT.

The repeated occurrence of unnecessary man-caused fires, through carelessness or wilfulness, has made strict enforcement of the state fire laws necessary. In 1921, a fire ranger with special training in law enforcement work was delegated to assist the district rangers in working up evidence on cases and bringing them to trial. In 1922 this work was taken over by Inspectors Fowler and Frost as a part of their field work. The following tabulation gives the results of law enforcement work the past two years:

California State Fire Law Enforcement Cases—1921.

Character of violation	Number of cases	Number of convictions	Number cash fines	Number jail sentences	Number acquittals	Amount of fines collected	Number cases set led out of court	Damage paid for cases set led out of court	Cases on which sentence suspended	Cases pending
Refusing to fight fire	1	1	1			\$10 00				
Blasting or burning without permit	4	4	3	1					4	
Setting fire accidentally or carelessly	31	9	8	1	14	260 00	3	\$99 78	3	5
Leaving camp fire burning or allowing it to escape	13	10	8	2	3	375 00			2	
Setting fire wilfully or intentionally	2	2	2			50 00			1	
Totals	51	26	22	4	17	\$695 00	3	\$99 78	10	5

California State Fire Law Enforcement Cases—1922.

Character of violation	Number of cases	Number of convictions	Number cash fines	Number jail sentences	Number acquittals	Amount of fines collected	Number cases set led out of court	Damage paid for cases set led out of court	Cases on which sentence suspended	Cases pending
Refusing to fight fire	13	9	8	1	2	\$95 00			2	2
Burning without permit	11	4	4	2	1	110 00	3	\$39 13	3	1
Setting fire carelessly or accidentally	23	16	10	6	2	500 00	2	148 36	6	3
Setting fire wilfully or intentionally	7	4	3	*1	3	145 00				
Operating engine without spark arrestor	1						1	10 80		
Stealing state tools	1				1					
Leaving camp fire burning	3	3	3			150 00				
Totals	59	36	28	10	9	\$1,000 00	6	\$198 29	11	6

*Party shown as convicted for wilfully setting fire was later adjudged insane.

The removal of the forest cover results in severe floods and high water during the winter with disastrous erosion, while the summer low water flow is correspondingly reduced.

CONTINUANCE OF A WATER SUPPLY.

Irrigation is the "One Big Thing" needed in superior California. Perpetual water for irrigation can best be assured by the maintenance of a forest cover. A forest cover can not be maintained unless adequate fire protection is afforded. Therefore, it is evident that the future prosperity of superior California depends very largely upon the effectiveness of the protection of the forest cover on its watersheds, in which the water needed for irrigation is stored, to be given up gradually as needed.

That the flow of water courses will be diminished when their headwaters are denuded of their cover, has been known since the times of the prophet Joel, whose lament it was that "A flame hath burned up all the trees of the field," and "The beasts of the field pant, for the water brooks are dried up." Joel was the earliest preacher of the conservation of watersheds, and, in a sense, the real inventor of the slogan, "Prevent Forest Fires."

China had no regard for its forest cover, and as a result turbulent rivers have ruined great areas of agricultural land and rendered thousands of people homeless. China is now striving with infinite labor to re-establish a forest cover on its thousands of barren slopes. Spain and Italy afford modern examples of peoples made destitute through the lack of water and timber because of reckless destruction of their forests. Every nation that has upset nature's balance through the unregulated burning and cutting of its forest areas has witnessed the impoverishment of its people.

A number of years ago the flow of the rivers supplying power to the factories in the eastern states became so irregular because of the denudation of their watersheds, that the government appropriated millions of dollars to purchase forest lands at their headwaters, in order that they might be effectively protected and function as regulators of the stream flow. How much more important is it to maintain and regulate the water in the streams of California, where the water is valuable both for power and irrigation purposes?

The people of southern California consider a fire in their brush-covered mountains a catastrophe, since the destruction of the vegetative cover permits the water to rush in torrents over the steep, barren slopes, carrying earth and rocks to the fertile lands below. The only recourse under such conditions is the construction of expensive check dams, and these are often filled with debris in a short time. It is not until the vegetation becomes established on the denuded slopes that the run-off becomes regulated and water is conserved by the mulch formed by this cover, to be given up gradually so that it can be used to advantage.

The prevention of fire is the basic principle of forestry practice. Unless forest and brush fires are controlled, the natural regulators of stream flow are destroyed and the development of the region, which depends upon a perpetual flow of water, is retarded. The forests on the mountains of California must be kept green if there are to be an abundance of green fields in the valleys.

Since July 1, 1921, Forest Examiner Munns has been making a study of watershed areas for the State Board of Forestry in response to Senate Concurrent Resolution No. 27, which reads as follows:

WHEREAS, It is reported that there are large and rapidly increasing areas in this state which have been and are being denuded of timber and other vegetable protective covering, and which, because of such denudation, are not only a present and rapidly increasing economic loss to the people of the state, but are also causing a rapidly increasing destruction of streams and harbors, and are also interfering with and threatening to destroy, with constantly increasing rapidity the availability of water for domestic, irrigation, hydro-electric power, mining, navigation, and other necessary purposes, be it

Resolved by the Senate, the Assembly concurring, That the State Board of Forestry be and hereby is directed to examine such areas and to report to the legislature, at its next regular session, the situation and approximate acreage of such areas as are most valuable for reforestation or recovering with other vegetable protection, and to report a plan whereby they may be reforested or otherwise covered with protective vegetation.

This report will be presented to the coming legislature. Following is a brief summary by Mr. Munns of his conclusions relative to the relation of watershed cover to the prosperity of the state:

WATERSHED PROTECTION.

By EDW. N. MUNNS, Forest Examiner.

There is probably no place in California, and certainly not in the United States, where the value of watershed protection is better understood or appreciated than in southern California. Here the rancher and home-owner alike are aware of the necessity for maintaining a heavy cover at all times on the mountain slopes above them, for where that cover is destroyed, their property is endangered by the floods and erosion that follows, while the water supply they are dependent upon for irrigation, from both the surface flow and the artesian basin, is jeopardized. This fact has been brought home to them time and time again through the damages they have suffered in the loss of improvements, ranch land, reduction in crop yield and interference with business. Some of the more recent incidents that are responsible for this appreciation of the protection afforded by the forested slopes may be given, though the need of protection has been felt ever since the region became thickly populated and water and land values became high.

Near San Fernando, in 1913, a watershed of a thousand acres was burned over through careless brush burning. The little colony of Little Lands was inundated the following February. Valuable land was ruined and a tremendous volume of detritus was piled up on the lands that the population had just placed under cultivation. In order to prevent a similar catastrophe and to keep the stream from leaving its channel, levees were built, but the first storm of the following year, and that but a small one, completely filled this channel with the gravel it brought down and the stream took a new course through this colony with attendant losses.

In 1915, a fire in Cajon Canyon, starting from a railroad locomotive, destroyed the cover on about 50 acres before it could be extinguished. That winter the high water washed away the irrigation system the ranches on the lands below depended upon for their water supply, while, in addition, some fine orchard land was washed away.

In 1918, following the removal of the cover from a mountain slope near Pasadena, a country home estate was endangered by the floods from this slope, the irrigation system was washed away, the source of the domestic water supply was buried and the beautiful grounds were covered with a layer of sand and gravel, which also covered much of the orange orchard adjoining.

In 1920, the eroded material from the great areas burned over during the preceding summer, caused by careless campers and residents, rendered transportation impossible by covering the roads and highways with the material brought down by the streams, filled a reservoir and an irrigation system full of mud and debris, and destroyed the usefulness of a small dam in one of the canyons. In a power plant near Azusa at the mouth of the San Gabriel Canyon, the sand in the water cut away the steel plates on the turbine wheels before the water could be shut off,

while the floor of the power house was covered with the sand and gravel brought down, and the generators and dynamos were badly injured. At Glendora, it is the practice to spread the flood waters of San Dimas Creek upon the flood cone of the stream to increase the absorption in the gravels and raise the level of the ground water. The attempt made in 1920 to do this damaged the debris cone and rendered it ineffective, for the flowing water did not clear itself of silt, and the silt soon clogged the pores in the gravel and made the absorption grounds almost impervious to water.

In November, 1922, the city of San Bernardino was greatly damaged by the results of a fire in City Creek, a few miles away. Tons of eroded material were deposited in the city highways and parks and the flood flow caused Warm Creek to overflow its banks and do much damage. Business was at a standstill and bridges were undermined and damaged.

While such statements are taken from the records of southern California, similar experiences differing only in degree and in particulars have occurred in the northern part of the state. They are, however, not as well known or appreciated because of the greater size of the drainage areas involved, the relatively smaller rural population, and the generally lower land and water values. One reason why the southern part of the state developed so rapidly has been because proper consideration was given the development of the water resources early in the history of the region, and similar proper development cannot go on where the relationship between the cover and the water supply is overlooked or neglected. A greater appreciation is being manifested as witnessed by the systematic study of the water question in relation to the development of agricultural lands.

We can develop our agriculture only as the water supply is made available for the land through storage and control, and it must be remembered that we can get only as much water from any given watershed as that area receives. After allowing for the amount evaporated from the soil and transpired, and used by the vegetation, run-off—both surface and underground—must equal the precipitation received. If then all the flow from an area takes place during the time of flood, that flow is lost when most urgently needed later on in the dry season, and at the same time this flow causes destruction because it is in flood. If that flood flow can be restrained and the water made to go into the ground, it then is released slowly and at a much later date through the gradual percolation to the underground basins and through seepage flows into the springs and streams. Absorption constitutes perhaps the most important factor in reducing flood flows and increasing summer flow, thereby equalizing the amount of water through the entire year.

Man has not been able to increase this absorption in any way. Dams have been used to hold the water in storage, but when the dam is full, the surplus waste water is lost. Check-dams in the small canyons are effective in causing some absorption, but these works are expensive to construct and maintain, and are not always effective because the silting makes the storage reservoirs behind them impervious to water. The maintenance of as heavy a plant cover as nature will permit to grow upon an area is the only means that man has at his command whereby he can influence the flow of streams. It makes no difference what that cover may be, whether it be grass, brush, chaparral or forest. If it is the highest type of cover that can be grown, it will increase absorption and affect the streams to the highest extent it is capable of.

The result of deforesting or denuding a watershed of its cover, or of reducing the density of this cover, or of replacing it with a poorer one, works to decrease this absorption. That is why the agencies of fire, unregulated lumbering, overgrazing, and smelter fumes are so disastrous to watersheds and why these watersheds must be protected to prevent the loss of cover. It is easy to appreciate the great losses involved when a forest ready for cutting is ruined or the feed upon which live stock are dependent for food is destroyed by fire, but we must realize that any fire no matter whether in our so-called worthless brush or chaparral, or in our forest or pasture lands, affects our water resource by wasting flood flows and increasing erosion through influencing the water holding capacity of the soil.

The water-holding capacity of the soil largely depends upon the amount of decaying vegetable matter there is mixed in with it. The agriculturist realizes this when he plows under straw or growing cover crops, for in addition to the fertilizer thus made, he is making the soil more retentive of moisture and thereby reducing the amount of water required for irrigation. Studies on burned-over areas show that after a fire in the chaparral the moisture holding capacity is reduced from 10 to 25 per cent the first year after a fire and up to 40 or 50 per cent in the following years. Thus a soil capable of holding 100 pounds of water before a fire could

hold only 50 or 60 pounds of water a year or two later. The rest of this surplus water must go off in the flow.

Increasing the run-off so rapidly, the water erodes and removes the soil, cutting gullies as it flows over the surface. Each gully lowers the water table slightly, the deeper the gully the lower the water table, and with the lowering of the water table, the density and growth of the cover is reduced, so that the effectiveness of the cover is further impaired, and therefore the influence of the cover upon the water supply is reduced. This would be a rather vicious cycle but for the one thing that plant cover, if protected, will gradually build up the soil to the condition it was formerly. Protection is needed then to maintain this cover to its highest degree.

While we can visualize the damage being wrought to a watershed by disastrous fires, because fire has always appealed to our imaginations, we perhaps fail to see that when an area is overgrazed to the point where the cover is practically gone, or where the area is destructively logged, that the cover has been impaired and its value is lessened as a water conserver. Yet such is the case.

Overgrazing is a chief offender in those lands at low elevations, where the winter pasture is secured. Herds are confined to a relatively small area, where if rainfall is light or the season is backward, the natural forage is greatly reduced. Overstocking, improper management of the herds and natural causes result in the destruction of the cover as if fire had occurred, and gradually the stand of native plants dwindles, erosion starts, the water table is lowered and a poorer type of cover results, with its attendant greater run-off and lessened absorption. While no large streams may be affected, still such development in the industry assists in the rapid run-off of water and increasing the damage from flood flows to land lower down, while as in the case of fire the absorption is also greatly lowered, which reduces thereby the amount which can and does get into the artesian basin. Only education of those who are at fault in the livestock industry can prevent such occurrences because such mismanagement of the lands works to the detriment of the industry as well as to the other agricultural interests, through a reduction in the carrying capacity of the land and the production of meat products.

With lumbering, we have still another factor involved. While the carrying on of the business of the industry is perfectly legitimate and highly desirable from the standpoint of the production of a necessary product, it too can be carried on in a way that proves detrimental to the flow and regime of the streams. Any logging where the major part of the stand is removed causes a loss in the flow of the streams, because forests retard the melting of snow, reduce temperatures and lower evaporation, and the removal of the cover works to the opposite of these benefits and thereby augments the flow of streams and reduces the amount absorbed by the soil. As a greater and greater per cent of the stand is removed, the influence becomes more marked and as at the present time much less than 10 per cent of the trees are left standing, and these not of the best for water conservation, there is a correspondingly greater influence upon the run-off. With the ever increasing area of forest that is cut-over, this influence will be exerted more and more strongly.

There is one saving feature in all this, that of the possibility of so logging that the land will reforest itself naturally within the shortest possible time. This can be done through what may be termed conservative logging, which means the care of advance growth, the leaving of trees suitable for seed production, and the protection of the area from fire afterwards. With such precautions, the forest should regenerate itself rapidly and after cutting, the young trees should respond readily to the changed conditions. Thus in a few years time the area is again in a forest, not the sized forest that originally stood upon this area, but one sufficiently dense and as effective in regards to the water supply as the original stand and one from which in a few years we may again secure a supply of lumber suitable for our needs. Thus conservative measures such as are in force in many logging operations will pay not alone in the benefits to be derived from the maintenance of a protective soil cover of the highest type, but also in the production of future crops.

Watershed protection, then, not only involves the prevention and suppression of fire in our hills and mountains but also includes the maintenance of the highest cover possible upon all lands in the watersheds. Denuded areas must be taken care of by planting some vegetative covering or helping it to become established through care in management and use. Areas not now denuded must be protected from those agencies which may bring about the destruction of the cover, at the same time permitting the production of the highest type of product possible.

As written above, the maintenance of the highest type of cover possible upon a watershed is the only means man has at his command whereby he can influence the flow of streams. It therefore behooves him to so administer these areas that this cover may be protected from any destroying agent and so managed that the highest type of cover may develop and be maintained.

Burney Falls, Shasta County, and one hundred and sixty acres of pine timber surrounding it, were given to the State for park purposes by Mr. and Mrs. Frank McArthur as a memorial to McArthur's father and mother, John and Catherine McArthur.

CONTINUANCE OF RECREATIONAL AREAS.

A notable characteristic of the Californian is his love for the out-of-doors. He has magnificent playgrounds at his disposal in the Sierra pine and Coast redwood regions. Often times, however, when he arrives at his favorite last summer's camp site, he is dismayed to find nothing but stumps and slash where formerly stood splendid trees. It is to be expected that many recreational areas in the mountains will be spoiled for campers as the forests are cut to supply him with lumber for his use in the valleys, but it is possible to preserve many of them in their virgin condition for all time.

The State Board of Forestry is doing much to provide permanent playgrounds in the mountains for people, not only of California, but also those who come in such great numbers from other parts of the country. In the Sierras a new state park is planned at Burney Falls, Shasta County, one of the most picturesque places in California. Breaking from its underground channel, Lost River plunges nearly two hundred feet into the stream bed below in a myriad of rainbow colors. A most interesting feature of Burney Falls is the emergence of water in sheets from different stratas of lava. There are six or eight distinct lava stratas on the face of the falls, separated by layers of sediment from which water emerges in vapor-like form. This volcanic formation gives evidence of the former action of Mount Burney, a near-by extinct snowcapped volcano, 10,000 feet in height.

The Burney Falls tract comprises 160 acres and was deeded to the state by Mr. and Mrs. Frank McArthur of San Francisco, with the understanding that the timber and falls would be preserved as a memorial to McArthur's father and mother, John and Catherine McArthur.

Governor William D. Stephens requested the State Board of Forestry to take over the administration of this area, and as a result sufficient funds are being requested from the legislature to employ a caretaker and provide the necessary camping conveniences to make Burney Falls Park a place where it will be a delight for people to go. It is very probable that other gifts will shortly be made which will materially add to the area of this park.

The greatest state park development has been in the redwood region in Humboldt County. The state appropriation, coupled with gifts of timber lands from different sources has resulted in the establishment of the Humboldt Redwood Park, the history of which is given in the following article.

HUMBOLDT REDWOOD PARK.

SOLON H. WILLIAMS, Deputy State Forester.

A few years ago a small company of earnest women of Eureka, Humboldt County, conceived the idea of saving a portion of the redwoods of Humboldt County for future generations. The idea spread all over the United States, and as a result of the propaganda instituted by this band of enthusiastic women, the Save the Redwoods League was formed in 1919. This organization, headed by Dr. John C. Merriam, of the Carnegie Institution of Washington, D. C., has worked untiringly to the end that a portion of these redwoods shall be saved. The League presented a bill to the legislature of 1921, appropriating \$300,000 for the purchase by the state of certain tracts of redwood along the south fork of the Eel River, adjacent to the

state highway in Humboldt and Mendocino counties. This bill was passed by the legislature with but one dissenting vote, and was signed by Governor Wm. D. Stephens.

The bill provided that the acquisition of these lands and their future maintenance be placed in the hands of the State Board of Forestry. As soon as funds were available, purchases were made under the conditions of the act, and now the state has under its jurisdiction a continuous strip of land from the township line between townships 1 and 2 south, on both sides of the highway to Miranda, a distance of approximately 12 miles, excepting two pieces for which the owners are asking exorbitant prices. The board in purchasing these lands has paid their commercial value and no more. All lands were purchased on a stumpage basis. No payments have been made until check cruises had been made by a reputable cruiser of the board's selection.

The following lands have been secured by purchase:

Name of Owner	Acreage	Price	Redwood	Cruise	Fir
*Vance Bottom-----	297	\$36,219 16	19,270,000		320,000
Sage Land & Imp. Company-----	394	60,000 00	16,944,600		582,200
Melinda Stoddard et al.-----	160	22,155 96	7,234,040		414,700
Standish & Hickey-----	40	2,000 00	1,600,000		75,000
Logan Estate-----	396	70,000 00	21,230,000		97,500
Devoy & Gillogly-----	120	30,000 00	9,387,000		250,000
**R. C. Chapman-----	47	22,000 00	4,825,000		55,000
Baldwin & McKinnon-----	200	18,991 16	6,371,000		786,000
Totals-----	1654	\$261,366 28	85,861,640		2,680,400

*This grove was secured at a total cost of \$61,219.16. Hon. William Kent and Hon. Stephen T. Mather contributed jointly \$25,000 towards the purchase price, the balance, \$36,219.16 being furnished by the state.

**Mrs. Clara Hinton Gould contributed \$2,000 towards the purchase of this grove, which was paid in addition to the \$22,000 above referred to.

Following is a list of lands donated to the state:

Name of donor	Acreage
Mrs. Perrott et al.-----	15
Hammond Lumber Company-----	30
Humboldt County-----	275
Dr. John C. Phillips-----	35
Save the Redwoods League-----	40
Standish and Hickey-----	3
Mrs. J. Hobart Moore, Mr. E. E. Ayer-----	160
Standish and Hickey-----	40
R. C. Chapman-----	7
Total-----	605

A bronze tablet has already been erected in the Bolling Grove to the memory of Col. Raynal C. Bolling, the first officer of high rank who gave his life to his country during the World War. Tablets suitably inscribed will be placed in each of the donated groves detailing by whom each grove was donated. Too much praise can not be given the Save the Redwoods League for their untiring activity in securing donations to this park. Other tracts will no doubt be donated adjoining the main tract and in other sections of the redwood belt in the near future.

Much work has already been accomplished in preparing the park for the use of campers and sight-seers. Permanent headquarters have been established on the Dunn and Dimmick property with a ranger in charge of the park. The headquarters house contains six rooms, and is for the use of the ranger only. A garage with four stalls, a bunkhouse with three sleeping rooms, and a cabin with two sleeping rooms have been built. An electric light system has been installed of sufficient capacity to light not only the administration buildings, but should occasion arise, to light the Dunn and Dimmick Grove. There has also been completed at the south end of the park, a two-room building for the use of a caretaker during the summer months. Sanitary conveniences have been installed in three of the groves, and a complete water system in two groves; tables and brick fireplaces have been installed for the use of campers and picnickers.

It is planned by the board to clear out the underbrush in a few places, so as to make these places available for camp sites, while other groves will be left in their present condition, except that such debris will be removed as will occasion danger from fire.

The State Board of Forestry, upon the acquisition of this property, decided that in view of the danger of trespass from split stuff operators, who are operating on property adjoining the park, that a definite survey and location of the lines of the state's property be made. Mr. J. N. Lentell, a licensed surveyor, was secured to perform this work, and all corners have been set and marked, and all trees along the exterior boundaries of the park have been tagged. It is also proposed to mark all corners with concrete stakes 6 inches by 6 inches, set 3 feet in the ground, so that danger of loss of these important landmarks by fire will be obviated.

While the danger from fire is not as great in the redwood section as it is in the pine regions, there is a great menace from fires to these trees which we are to preserve. It is perfectly true that fire does not as a rule consume these redwood trees, but it does weaken them to such an extent that they frequently fall, and in falling often destroy much healthy, vigorous timber. A fire line should be built and maintained around this park, especially at points of danger and where split stuff operations are being carried on.

STATE NURSERY AND HIGHWAY TREE PLANTING.

The State Nursery was established in response to the insistent public demand for trees along the state highway. For years this matter was agitated, until plans were formulated between the State Highway Commission and the State Board of Forestry, with the result that trees are now being raised and furnished for this purpose by the state.

A tract of thirty acres located along the highway between Sacramento and Davis was acquired by funds furnished by the State Highway Commission, and a sufficient appropriation was made by the last legislature at the instance of the State Board of Forestry to develop this site in accordance with plans made by the State Engineering Department. A bare field less than two years ago has now been developed by State Nurseryman Aldinger into a place of beauty, where thousands of trees are being grown to plant along the highways of California.

The buildings at the State Nursery conform to a well-worked out architectural scheme. Near the highway is a group of buildings of colonial design, consisting of the nurseryman's cottage, helpers' quarters, garage and implement shed, and barn. Bordered by shrubbery and flower beds, with a well-kept lawn in front of the cottage, this group presents a most attractive appearance from the highway.

Back of this group is the irrigation system and lathhouse. Water for irrigation purposes is pumped from a well by an electric motor pump into a concrete-lined reservoir with a capacity of 350,000 gallons. From this reservoir the water is diverted to all parts of the nursery by means of concrete irrigation pipes. By this means the cost of irrigation is greatly reduced in comparison with direct pumping from the well. In addition there is storage water available in case of accident to the pumping plant. Failure of the water supply at critical periods is a vital matter in growing nursery stock.

Many of the trees are first started in the lathhouse and hot beds from seed. At present there are from 100,000 to 150,000 seedlings growing preparatory to setting out in nursery rows next summer. In order to reduce the time of propagation, however, large numbers of trees are grown in nursery rows from seed, cuttings and seedlings. For example, this spring black walnut seed, European sycamore cut-

Buildings at State Nursery near Davis, where trees are propagated for planting along the State Highways.

tings and American elm seedlings, which were placed in nursery rows, have developed into trees of sufficient size to plant on the highways this winter. There are about 60,000 trees now available for distribution.

The principal trees grown at the State Nursery are California black walnut, European sycamore, black locust, American elm and Lombardy poplar. It is realized that there are other species that are suitable for highway planting, such as oaks in variety, Norway maple, honey locust and various species of eucalypti, and a start has been made in propagating them. In addition, experiments are being made with little known species furnished by the Bureau of Plant Industry, such as Chinese maple, Chinese hackberry, Zelkova and pistache. Some of this material is being furnished for the landscape beautification of state institutions, but by far the major portion of the trees grown will be planted on the State Highways as rapidly as conditions warrant.

The plan of highway planting that is being followed is a cooperative one, which involves three different agencies, the State Highway Commission, the State Board of Forestry and the agency which makes application to plant the trees. All applications are referred to the Highway Tree Planting Committee, consisting of the State Highway Engineer, State Forester, State Gardener and the Professor of Landscape Architecture of the University of California, which prepares detailed instructions for the planting, after examination of the locality for which application is made. This plan is used as a basis for the terms of the planting permit issued by the Highway Commission.

The entire cost of planting, which includes the staking and protection of trees with wire netting where necessary, is borne by the applicant. The trees are furnished from the State Nursery, the only cost being that of transportation to the place of planting. It is estimated that the cost of planting will not exceed one dollar per tree. In many places it can be done for less, especially where blasting is not necessary. After the trees are planted they are maintained by the State Highway Commission, a task of no mean proportions since it involves regular watering and cultivating, and a constant warfare against pests such as borers, grasshoppers and gophers.

Last year 7600 trees were propagated at the State Nursery and distributed for planting on the state highways. Besides this stock, there were gifts of trees and shrubs from the Monterey Tree Growing Club, Division of Forestry and Division of Landscape Gardening of the University of California, which were used. Permits for planting from and including 1920 to the end of the fiscal year 1922 were issued for a total of 99.85 miles. Examination made at the end of this season shows a 75 per cent survival. The chief causes of loss were drowning from excess irrigation water from adjoining land, borers and grass fires.

This year there will be a considerable increase in the amount of planting done, on account of the increased number of trees available for distribution. The state highway will be planted from Red Bluff to Corning, a distance of 18 miles, from Marysville to Wheatland, a distance of 11 miles, and from Livingston to Turlock, a distance of 10 miles. Highway planting will also be done in Sacramento, Placer, Napa, San Diego, Tulare, Glenn, Colusa, San Joaquin and Santa Clara counties. It is expected that at least 150 miles of state highway will be planted the coming winter and spring, an undertaking that speaks well for the mental attitude and spirit of Californians.

TREE MAINTENANCE ON STATE HIGHWAYS.

BY W. E. GLENDINNING, Highway Tree Expert.

The original planting of trees on the state highways as well as any replacements made, develops on the individual, club or society making the request, after which they pass immediately into the hands of the Highway Commission, which assumes the responsibility for their maintenance. In keeping with this program it soon became apparent that it would be necessary to centralize the care of these plantings under a qualified tree expert, who would act in an advisory capacity to the California Highway Commission, under the general supervision of the State Forester.

The writer was selected to carry out this work and on May 15, 1922, began checking up the several different highway plantings throughout the state and as rapidly as possible began forwarding memoranda as to their condition and requirements. This work has been carried on without interruption and as a result nearly all the plantings on the highways of the state have been checked up, reported upon, and where found to require attention, steps have been taken to remedy existing troubles.

It was found that, as in all new undertakings, the care of these plantings should have come under systematized control at an earlier date than they did and that a realization of their requirements, both as to planting and care, was lacking. It was not an unwillingness to attend these trees that was responsible for their condition, but more of a lack of knowing just what should be done for their preservation that caused the decadency and finally the death of a certain per cent of them.

Of the 40,000 trees planted on the state highway, during the past two years, approximately 25 per cent will require replacement due to having died from various causes. This represents some little loss, but is not out of the usual. Had it been possible to have taken these trees over earlier in the season more of them could have been saved. Soon after these investigations began it was thought best to turn activities into the line of salvaging all possible of the younger planting before it became too late. In consequence the work was directed along this line and as a result of the season's work, from 10,000 to 15,000 trees have been saved and started on the way to permanent establishment that would have perished in the event of attention being withheld.

Various agencies are responsible for the loss of trees and they are taken up with limited explanation, under the following headings:

Planting.

The greater part of the loss of the trees represented by the 25 per cent mentioned above was due to improper planting. In a number of localities the trees were not placed at a sufficient depth in the ground to allow for the proper covering of the root system, while in other cases they were literally trampled into the wet earth. This latter trouble was generally found to follow a "community plan," where no one was in charge and usually the planting held in order to afford an opportunity of having a picnic. In every section, it is plainly in evidence that had more attention been given to the initial planting of the trees, the loss would have been materially lessened. This trouble will be overcome in the future since the State Forester will have a representative present to supervise all plantings.

Overflow.

A heavy loss is due to the planting of trees in the ditches and deep "borrow pits" that parallel the highway proper, where no drainage was afforded and where the irrigating water from adjoining fields was allowed to stand at the base of the trees, throughout the year. This resulted in "sour sapping" the roots and in no case where a tree was thus inundated did it recover. An opportunity was found to drain away the water at some points and where this could be done, the trees were saved. Until such time as this matter can be remedied, it is unwise to make any attempt at replacement.

Drought.

Many trees throughout the state are, necessarily, planted in what can be termed semi-desert situation. Of these there was a loss due to the soil drying out before their condition was realized. As soon as attention was directed to this, the trees were watered and many saved that would have perished had irrigation been longer delayed.

Shade trees are as necessary for the development of child life as good teaching.

Monterey cypress on the State Highway badly infected with cypress bark scale. Sprayed under direction of W. E. Glendenning, Highway Tree Expert.

Cultivating and Mulching.

Some trees were lost due to the lack of proper cultivation, owing to the hardening of the ground following planting in a wet season. This was corrected as soon as possible and a suitable amount of mulch distributed around the base of the trees in order to prevent the baking and cracking of the ground. This mulch also served a double purpose in that it was instrumental in the conservation of water. In the extremely hot areas, it was estimated that the mulching with straw reduced the demand for water from 25 to 40 per cent as compared with the amount originally used. This alone is an item of major importance where the water is conveyed a long distance in tanks.

Wind.

In many localities, particularly in open areas, considerable damage was done by wind. This damage was pronouncedly in evidence where the soil was of a nature to give rapid growth to the trees. The trees were seldom broken, but the wind continually blowing from the one direction so trained the top and branches that it gave a leaning, "lop-sided" angle to them that did away with any chance of their becoming worth while. This condition was very noticeable at Santa Rosa, Petaluma and Madera, as well as in the long line south of Bakersfield. This trouble was corrected by drastic pruning, after which the trees were tied securely to stakes provided for the purpose.

Alkaline Soil.

Trouble has been encountered as a result of certain varieties of trees having been planted in soils heavily saturated with alkali and a number have died as a result. In replanting, in these areas, it is proposed to neutralize this ground with a lighter soil and also to select more adaptable trees for replacement.

Insects.

Aside from careless planting, insects have been responsible for the greater loss of trees. A small per cent of this loss is due to the devastation caused by grasshoppers, but fortunately ample time was afforded to forestall their ravages. It was found necessary to bag, approximately, 14 miles of trees. This method proved effective and as a result a thousand trees were saved. This experiment was worked out at Oroville, Willows and Orland.

The greater part of the loss from insects was due to the activity of "Flat-head" borers—Buprestid larvae. A partial control of this menace was undertaken, but the damage had been brought about prior to a time of the organization of forces necessary to combat this pest. Borer control consists of the application of repellent washes to the trunks of the trees, early in the season and at a time when the adult insects are active, following emergence from the overwintering stages. If, during the spring months, the insects can be prevented from depositing eggs on the outer bark by treating the trees to washes that will repel them, no further trouble will be experienced, but once the eggs are deposited and left undisturbed until incubation takes place, at which time the larvae immediately enters the cambium bark, the tree has but little chance. Occasionally one will live through a single attack, but ordinarily it is so retarded in growth that it is the better policy to replace it with a new unaffected tree.

It is proposed to devote every energy to the control of this particular insect. A collaboration has been effected with the Branch of Forest and Shade-tree Insect Investigation, U. S. Bureau of Entomology in order to better further this work.

Pronounced damage and loss from borer attack occurred in the planting between Sacramento and Woodland, the Sacramento County planting and at Oroville, Lodi, Gridley, Willows and Santa Rosa.

Fire.

Some little loss has been brought about by fire, but if instructions are followed in regard to clearing back the grass and weeds a certain distance from the trees, together with the required cultivation, no further trouble need be feared from this source.

Loose Stock.

Trees have been lost, owing to having been trampled down by loose stock, either driven or left to graze on the highways. Bands of sheep that are driven from point to point, on the roads, have been responsible for the greater part of this

damage. As an example, 70 fine specimens of Chinese pistachio were destroyed, in the Chico planting, in a single day, by sheep. This danger became so menacing that steps were taken to protect the trees by placing wire guards about them in all sections where there was any likelihood of sheep and cattle being moved. This guarding of the trees is to be continued and all permits for planting issued at the present time call for the requirement of a uniform wire guard being placed around each tree. This guard to be furnished and put in place at the expense of those to whom the permit is issued.

Root Pruning.

Loss of trees has resulted from the undue pruning of roots prior to a time of planting. This trouble has been due to the lack of proper supervision at the time the trees were installed. It was found in one instance, where trees were planted under contract, that the root system had been cut away to allow for the planting of the trees in shallow "pot-holes" and at the same time the tree was left to a height of from ten to fourteen feet with no effort made to cut it back. Also, trees coming from the nursery have been carelessly handled and in some cases have been distributed along the line of holes days before they were planted. Under the present method of procedure this can not occur again since no trees are to be distributed until such time as some one has assumed the responsibility for their proper care.

It is only fair to add that the nursery stock referred to in the foregoing paragraph was not shipped from the State Nursery and was, all in all, a private enterprise. However, this did not do away with the expense attendant upon the planting prior to a time of discovery of true conditions.

It can be seen from the rather formidable list of destructive agencies given above, that difficulties are in evidence at every turn and it is impossible to come in contact with a single project in the state without encountering trouble which in each case presents a different angle. However, it is a satisfaction to know it is only the lesser part of the trees that have met with disaster and that we still have many miles of splendid trees, lining the highways of the state, standing as a testimonial to the enterprise and forethought of the men and women responsible for their being.

Commercial Valuations.

Trees are planted, primarily, for the purpose of beautifying and ornamenting the byways, sections and areas which they are to surround and occupy, but in considering this phase of the situation, we are apt to lose sight of the part they take as effecting the economic status of the community.

In regard to the highway planting the value of trees in the outright protection of the roadbeds and surfacing is a matter best answered by the engineer, but beyond any worth of this nature, we have a right to place a direct valuation of fifteen dollars on every tree that has reached its seventh year. This is a fair valuation and in keeping with data assembled by the federal authorities throughout the entire country. Also, in placing this value on ornamental trees, arrived at by comparative estimates, it does not mean that they could be purchased for this sum, or for that matter, double the amount given. The \$15 per tree represents but little more than a fuel value.

It is decidedly worth while to consider the value of a well established planting as to the influence it brings to bear on the surrounding and adjoining areas. This is a question that is not debatable in the face of expressed opinions, heard every day, to effect "that a locality supporting a stand of trees such as these must necessarily amount to something" and is accepted as proof, that where ornamental trees can be grown nothing will prevent the same accomplishment in the way of the establishment of orchard and vineyards, in the same sections. And beyond this, the presence of well kept plantings, extending along the roads from community centers, gives an impression of stability and enterprise that is bound to attract the attention of worthwhile people who desire and who are looking for an opportunity of casting their lot among fellows of their kind. As evidence of the productiveness and possibilities of a locality and as a direct advertising medium, the highway trees are worth every effort expended in their creation. It is much a question as to whether it would be possible to accomplish an equal objective through any other channel where an equal outlay of funds is to be considered.

The few reasons given above as having a bearing on the immediate commercial value of the trees only lead to the contemplation of many more, such as influence on public health, shelter and others too numerous to take up in an article of this length.

The Old Planting.

In many localities the line of the State Highways has taken the route of the former county roads. These roads, in many places, were bordered with trees which were included in the transfer to the Highway Commission. Those responsible for the reconstruction of these roads have been watchful to a degree that every effort was exerted in the preservation of the plantings. In favored localities the major part of the old planting is in a fairly acceptable condition. Yet scattered throughout every section can be found trees, that, due to continued neglect, are in a decadent condition.

Thinking that the salvaging of the newly planted trees required the first attention and knowing that even the worst of the old trees would survive, at least another year, it was thought best to direct the work of preservation to points where it was most needed. As a result of this, with few exceptions, such as the removal of objectionable trees, either in part or as a whole, the old plantings have received but little attention. However, one exception to this program was made. On the highway five miles north of San Rafael near the little village of Ignacio, is a line of Monterey cypress. This line of trees, planted some 30 years ago, originally consisted of about 160 specimens, but at the present time only 124 remain. The death of the 35 to 40 trees is due to the presence of an infestation of Cypress bark scale (*Enhornia cupressi*) and it was discovered that the remaining trees were heavily infested with the same insect in a way and to an extent that their survival was a matter of but a very few years, at least. Taking into consideration the position of these trees and their manifold benefit to this particular piece of road, the matter of saving them was looked upon in the light of an emergency. In consequence of this a request was made of the Highway Commission for the necessary material and authority to apply it. The material was furnished and authority granted and as soon as possible these trees were sprayed with an 8 per cent solution of a high gravity miscible oil. This work was carried through in cooperation with the Federal Bureau of Entomology and Mr. Burke, specialist in charge, stationed at Palo Alto, California, gave the matter his personal attention. We have every reason to believe the work to have been successful and as a prediction, unless the same methods are used in other cases, these will be the only trees of this variety left before the expiration of the next five years. Hundreds of like trees are either dead or dying from the same cause, throughout the state, but due to the isolation of the group treated, it is agreed by those familiar with the life history of the insect, that a term of some years will elapse before they can accumulate in sufficient numbers to bring about material damage to the planting that was subjected to control measures.

The cost of control was less than \$2 per tree and when it is taken into consideration that the cost of rearing a tree of this size represents an outlay of from \$10 to \$15, it can be concluded that work of this nature comes under the head of good business. Attention is directed to many similar situations throughout the state with a request that the work prosecuted at this point be carefully watched in order that its effectiveness may be determined.

The men and women of California have taken upon themselves the task of planting the highways of the state with trees. As has been mentioned before, the primary reason for this work is to beautify, ornament and adorn these same byways, as well as to add a measure of comfort, pleasure and happiness to mankind. There is another reason for this great work also. Although it probably is not always uppermost in mind, it is the inherent desire on the part of every normal human being to erect a monument to him or herself that will stand established as a mark of achievement. To this end, the planting of trees is no new thing. It has been for all time. We of today can see around us magnificent trees that were planted by our fathers and planted and tenderly cared for by them with no other thought in mind than that of contributing to the welfare of those who were to follow on.

It was ever thus, for it requires but little research to bring to light the very fact that we are today planting like trees and under like names as were in existence at the first dawn of history, as well as planting them with like motives, that of having our part in contributing to posterity and in turn, as our wage, to be remembered as a builder on the Earth.

EDUCATIONAL WORK.

"Forest Protection Week" was widely observed in California during the week, April 16 to 22, 1922. Much publicity matter was sent out by the State Forester and the U. S. Forest Service, and many talks on forest protection were given at public gatherings by members of both these organizations.

Governor Stephens issued the following proclamation, which was broadcasted throughout the state:

Whereas, The Forests of California, with proper care and protection from fire, will supply by their recurring growth for generation after generation, the needs for timber of all our citizens; and

Whereas, During the summer of 1921, forest brush, grass, hay and grain fires devastated 698,357 acres in California, causing a direct monetary loss estimated at \$942,977; killing young trees, the value of which, fifty years hence, cannot be estimated; destroying pasture that should have fed hundreds of cattle, sheep and horses; denuding watershed areas of growth needed to conserve water from winter storms for summer irrigation and electric power purposes; leaving barren waste in place of sylvan beauty; and

Whereas, With our growing population our forests are becoming more valuable, both for timber and for the enjoyment and recreation of our populace and tourists from other states; and

Whereas, By reasonable care and protection this great loss can be greatly reduced, our forests preserved, our hay, grain and pasture conserved;

Therefore, I, William D. Stephens, Governor of the State of California, do proclaim the week April 16 to 22, 1922, Forest Protection and Fire Prevention Week, and call upon all of the citizens of California to pledge themselves to exercise watchful care against the starting of fires, either in forests, pasture, or grain areas and to extinguish them promptly when by mischance they do occur, knowing that so to do is to perform one of the most important services that can be rendered to the present and future welfare of our state.

Let teachers observe the week by impressing upon our boys and girls this duty.

Let ministers instruct their congregations.

Let associations such as the Boy Scouts, Farm Bureaus, patriotic and benevolent societies, Chambers of Commerce, Women's Clubs and the like join in this crusade to protect ourselves and our posterity.

Let railroads take all steps needful to prevent or extinguish fires along their rights of way.

Let fishermen and all who use the forests or countryside for health or recreation, see to it that their fires are kept safe and that carelessness does not endanger that which they enjoy.

Let all citizens adopt as their slogan for this and succeeding years, "Help Prevent Fire," and thus preserve the beauty and wealth of our beloved state.

WILLIAM D. STEPHENS,

Governor.

The importance of teaching children the necessity of care with fire was recognized by the last legislature, which passed a law making courses in fire prevention study compulsory in all elementary, secondary, and normal schools of the state. As a consequence, "Forest Protection Week" received much attention in the schools. The Superintendent of Public Instruction sent out "A Forest Fire Prevention Manual for the School Children of California," which was prepared by the State Forester and the United States Forest Service, with the following foreword:

To the Teachers of California:

Permit me to call your attention to the fact that section 1665 of the Political Code, as revised by the last legislature, makes it obligatory upon teachers to give instruction in fire prevention. This includes the prevention of fire not only in

buildings but also in forests and fields. The State and the United States Forestry Departments have prepared this bulletin in order that the matter of fire prevention may be adequately presented. I am sure I need not urge the law upon the teachers of California. They have always responded whenever a public need has been brought to their attention.

California has wonderful forests that adorn the mountain regions. They are the playgrounds of hundreds of thousands of the people; they are the source of much building material; they contain the springs of great rivers that make the plains fertile. They must be preserved not only for the sake of future generations but also for the present generation. Destructive fires sweep over great sections of the forest each year. Many of these fires are due to carelessness. The teaching of fire prevention in forests is a great public need. I appeal to the teachers to give this matter earnest attention during each school year, especially during forest fire prevention week, and I know that this appeal will not be in vain.

Very truly yours,

WILL C. WOOD,
Superintendent of Public Instruction.

There is no doubt but that the education being given the present generation of school children in California in fire prevention is going to have a decided effect in reducing fire losses in the future. The Boy Scouts in particular are rendering signal service to the state, not only in fire prevention, but also in fire suppression. This summer the Santa Cruz Boy Scouts, under the leadership of R. E. Burton, a teacher in the Santa Cruz High School, did splendid work in assisting to control a forest fire near Soquel.

REPORT

DIVISION OF LAND SETTLEMENT.

DEPARTMENT OF PUBLIC WORKS.

ELWOOD MEAD, Chief of Division.

It is the man who buys farm land today for whom the farm problem must be solved. If it is not solved for him, then the annual crop of those buying farms will fail and American agriculture will decay.—*World's Work*, September, 1922, p. 511.

During the past two years California has given repeated evidences that rural development is regarded as a matter of great importance. The efforts to add 300,000 acres to the cultivated area of Imperial County is one indication. The movements to raise large sums, \$1,000,000 in one instance and \$400,000 in another, to advertise the resources of northern California, is another.

There are ample reasons for this interest. Although in the value of her agricultural products California ranks fifth among the states, this wealth is drawn from a comparatively small portion of her productive land and is created by the labor of a still smaller fraction of the state's population. The last census shows that only 15 per cent of the people live on farms and in towns of less than 2500 people. Probably not more than 10 per cent live in the open country. We have, therefore, a one-sided development. In the last ten years our cities grew five times as fast as our rural population.

This was not due to a lack of desire on the part of American farmers to come to California, nor to lack of fertile land. Both of these exist. Development has halted and our great resources of land and water are unused because we have not made adequate provision for overcoming the obstacles which confront settlers on our unused or ill used lands.

A great influx of settlers and an enormous increase of wealth in land awaits the expansion of a policy of aid and direction which will tend to make rural life more attractive and give broader opportunities to men of moderate means. Recognition of these facts has directed increasing attention to the operation of the state land settlement act and to progress of the two settlements, Durham and Delhi, created under its provisions.

THE STATE POLICY AND ITS RESULTS.

A few years ago California was wise enough to recognize the fact that the future well-being of the state called for the settlement of land upon the basis of the associated group or neighborhood and not merely the location of the isolated, independent farmer.—*Review of Reviews*, October, 1921, p. 397.

These two settlements have been created under legislation which gives settlers 36½ years' time in which to pay for farms with interest at 5 per cent on deferred payments. It provides for the creation of communities large enough to give the settlers the benefit of expert advice and direction and it enables them to cooperate in carrying out development and in the management of business affairs afterwards.

This report outlines the methods by which these policies have been given practical effect in helping settlers to improve their farms and meet their payments to the state. Under it, the Durham settlement lands, which unfriendly critics called "a malarial marsh unfit for human habitation," have become the home of 139 settlers and their families, all of whom are leading healthful contented lives. Delhi, which the enemies of the state's policy called "a wind-swept desert of shifting sand" has been transformed into alfalfa fields, orchards, and vineyards on which 217 families now live and where 400 families will live when the development is completed. On this land 10 tons of alfalfa to the acre have been harvested this year and dairy herds of settlers have repeatedly held first place in the monthly records of state cow-testing competitions.

Before the state bought the Delhi lands, the rental income was about \$4,000 a year. Competent experts predict that within 10 years the crops from this land will be worth \$1,000,000 a year.

ONE URGENT NEED FOR CLOSER SETTLEMENT.

While there are great opportunities for closer settlement in all sections of the state, it will be especially timely and valuable in the irrigation districts recently organized where reservoirs and canals have been built to water great areas of land but which are still growing crops that are watered by rain. For years we have been selling millions of dollars of bonds, secured by a first mortgage on the land, and with this money building canals and reservoirs to water land mainly held in large holdings. This land is either wholly unimproved or used to grow grain. It is largely owned by men who are not skilled in methods of intense culture. Few have the capital needed to improve and equip irrigated farms. They are, therefore, not in a position to meet interest payments on the debt for water. The income from land, and in the end, the value of irrigation bonds depend on the creation in these districts of small farms improved and equipped for intensive cultivation.

IRRIGATION CANALS DO NOT CREATE IRRIGATED FARMS.

We are beginning to learn, as other countries have learned, that building canals and reservoirs is not the remunerative part of irrigation development. An irrigation canal is a liability until the water is used. The money to pay water charges has to come out of crops. But before the farmer can begin to earn this money, the land must be cut up into farms of suitable size and they must be improved and equipped for irrigated agriculture. Changing raw land into improved small farms is the costly part of irrigation development. Few except settlers realize how much money it takes. Hundreds of millions of dollars have been lost in irrigation schemes because planned development stopped with canals and reservoirs. Irrigation enterprises are left to drift just at the point where management, money, ability and experienced direction would bring the largest returns. The great sums of money needed to build houses, grade land for irrigation, and buy farm equipment are either not considered or left to be provided by the burdened land owner or the oversanguine land buyer.

Instead of being a detail, means and plans for financing the settlement and improvement of farms are necessary to rapid development of irrigated areas. Neglect to provide these things wrecks more irrigation schemes than all other causes combined. There is as much need for working out the right size of farms, the kind of agriculture, the cost of changing raw land into farms and creating conditions under which settlers can buy and pay for farms as there is for working out plans and estimates of cost of reservoirs and canals.

MORE THAN A LAND SELLING CAMPAIGN IS REQUIRED.

The state (California) already has an excess of irrigated land for which settlers are required. It needs money to finance new settlers far more than it needs additional irrigation facilities. Also, through established channels funds are steadily flowing into new irrigation enterprises but for scientific colonization of these new irrigation projects the available funds are totally inadequate.— Editorial, *Sunset Magazine*, September, 1922, p. 45.

When land sold for \$20 an acre and water rights were cheap, almost any hard working farmer could become a land owner in this state. Unplanned development brought results although it was never efficient. But when land costs from \$100 to \$200 an acre, and when it costs two or three times as much to improve and equip a farm as it did twenty years ago, it takes more than the arts of modern publicity to attract settlers and enable them to succeed.

During the past year a series of investigations have been carried on to determine what it costs to change the large tracts of grain or brush land into small intensively cultivated farms. Below is given the development expenses of about 70 farms varying in size from 20 to 40 acres and irrigated in some cases by water from gravity irrigation districts and in others by pumping plants lifting water from wells.

Table Giving Average Cost of Land and Average Capital Expenditure in the Development of 70 Farms in Typical Irrigated Areas.

	Per acre
Purchase price of land.....	\$160 00
<i>Expenses of Development.</i>	
Cost of district water rights or pumping plants.....	47 50
Cost of clearing, leveling and building laterals.....	76 00
<i>Cost of Buildings and Equipment.</i>	
House	25 00
Barns, outbuildings, fences.....	18 00
Farm implements.....	11 00
Livestock, including horses and cows.....	16 00
	<hr/>
	\$193 50
<i>Cost of Preparing the Land for Alfalfa.</i>	
Checking, bordering.....	16 00
Seed and seeding.....	8 00
	<hr/>
Total average cost of preparing an alfalfa farm.....	\$217 50

Total of expenses of development and cost of buildings and equipment from page 7 -----	\$193 50
---	----------

Cost of Preparing and Planting Orchards.

Preparation of the land-----	15 00
Trees -----	30 00
Planting and care-----	10 00

Total average cost of developing an orchard farm-----	\$248 50
Adding purchase price of the land-----	160 00

Gives the total average cost of an orchard farm-----	\$408 50
--	----------

In the development of an orchard, there will be little or no income the first year and if we are to have a complete understanding of the settler's outlay, we should include the first year's operating expenses on either kind of a farm, which are about as follows:

Cost of Operation for the First Year.

Interest on capital expenditure-----	\$25 00
Taxes, insurance-----	3 00
Fertilizers -----	2 00
Irrigation -----	3 00
Annual charges for water-----	8 00
Labor, cultivation-----	11 00

\$52 00

Total investment at the end of the first year-----	\$460 50
--	----------

COMMENT.

We have adhered to a mistaken idea that once a man was sold a piece of land, he could in some way succeed. That was only true when land was free or low priced. The above figures convince anyone that it is not true today and these investigations have shown that the development costs, after the main canals have been built, are far greater than the cost of providing water and they are also greater than the purchase price of the land. Cutting land prices will not, therefore, as many have assumed, solve the settler's problems. If we want settlement to be rapid and successful, we must work out plans for doing in a wholesale and efficient way the things needed to change grain and brush land into small settlers' homes.

Under the state land settlement act, experts plan the development. There is teamwork in the settler's buying and the provision that the state can loan a settler up to \$3,000 to enable him to complete his development has been the life saver of many who would otherwise have exhausted their capital before the earning power of the farm had been established. The value of expert direction in clearing, leveling land, building lateral ditches, planning the location, making designs for houses, barns and outbuildings, and buying the material at whole-sale can only be realized by those who have contrasted the delay, the cost, and the high percentage of failures in an unplanned development with what has taken place in the state settlements. It would of course obviate the need for this kind of organized direction of settlers and of making loans to them if the owners of large areas of land would im-

prove it themselves and then sell the farms to settlers as going concerns. But with a few exceptions like the improved fig orchards of J. C. Forkner of Fresno and the fine small improved farms of the San Fernando Valley, little in this direction has been done and the amount of capital it takes gives little hope that much will be done in the future.

HOW SETTLERS ARE AIDED BY SCIENTIFIC LAND SETTLEMENT.

The preliminary work done by the state at Durham and Delhi is a very good illustration of how much has to be done to whip raw land into shape. When the state bought these two tracts of land, they were regarded as ready for colonization and a part of both of them had been subdivided and offered to settlers, but before the state sold the land, it had done the following things:

At Durham.

1. Made a soil survey. The prices of farms were based largely on that survey. The soil map has been a valuable guide to settlers in cultivation.
2. Settlers' water right controversies on Butte Creek were settled.
3. Built a system of irrigation ditches reaching each settler's farm.
4. Built levees and drains to protect the land from floods or storm waters.
5. Organized a mosquito abatement district to protect the settlers from malaria.
6. Planted a large part of the land to crops.
7. Prepared plans of houses and made arrangements for securing wholesale prices on building materials.

At Delhi.

1. Prepared a soil map showing all the details of soil conditions to a depth of six feet over the entire area.
2. Prepared a contour map for each allotment showing the proposed location of the distributing pipe and proposed plan for the development of the allotment.
3. Constructed a concrete pipe system to carry water to each allotment; the total value of all the pipe installation amounts to nearly one million dollars.
4. Laid out roads and graded throughout the entire settlement. Ten thousand dollars worth of gravel was placed on the main roads the first two years by the county.
5. Prepared for irrigation a portion of the land prior to settlement. In practically all cases, engineering assistance was rendered settlers in the preparation of land for irrigation and in the orientation of orchards, vineyards, and buildings.
6. Prepared plans for houses, barns and poultry houses when requested, and in a majority of cases detailed plans and specifications were prepared, contracts let, and building supervised by the farmstead engineer.

There are also certain features of the state plan that are of great advantage after settlers have bought their farms.

Among these are:

1. The long period of payment and the low interest rate.
2. The fact that no profit has to be added to the land, as the motive is public welfare, and practically no selling expenses.
3. Securing lower prices by taking advantage of being able to buy material through the state purchasing agent.
4. Ability to buy land at the best possible figure through the competition of land owners in selling to the state.

Helping settlers to plan their development and to organize for working together in business has enabled the Durham dairymen to get an extra price for all the milk sold. It is saving Delhi settlers over 10 per cent on the cost of all their farm buildings. It enables them to buy better stock for less money and sell their hay, poultry, and eggs for better prices. Their dollars go farther because of this team work and expert direction. Yet with all this help, the struggle of many settlers to keep going and meet payments has taxed their courage, endurance, and resources to the limit. If they had been left to work alone or unaided, on many of these farms the state would now be an absentee landlord. As it is, only 13 settlers at Durham have sold their farms and only 8 have left the settlement. Only 17 settlers out of over 200 have sold their farms at Delhi. One hundred thirty-nine families live at Durham where no land owner lived four years ago and 216 live at Delhi where no land owner lived two years ago.

The American farmers in these settlements have come from 15 states. More than 100 ex-service men have found their opportunity in life in these settlements. Not all have been able to meet their payments on time and for the full amount but the arrears are remarkably small. In some cases settlers have been advised to use their capital to prepare the farms for irrigation and to plant trees and vines.

All that the state has done at Durham and Delhi will be needed to be done for settlers on 15,000 acres awaiting development in the Happy Valley District, on 100,000 acres in the Merced District, on 250,000 acres in the larger Madera District, and on the 300,000 acres when it is reclaimed in the Imperial Valley. What the state has done, therefore, is correctly stated by Arthur Ruhl in the August number of Harper's Magazine as being "*Nothing untried or unduly paternalistic. We have merely done what has been done in Europe long ago—loaned to the individual for the benefit of all some of the state's surplus capital and expert intelligence.*"

HOW THESE SETTLEMENTS HAVE ADDED TO THE STATE'S WEALTH.

Durham settlers have invested more than \$400,000 of their own money in buildings, leveling land and planting orchards. That adds to the state's security. Delhi settlers have put half a million dollars of their own capital into farms to which the state holds title. Nothing except complete collapse of rural values can prevent the state receiving back all the money invested. Durham has a surplus of \$142,000. Delhi \$250,000. The latter will be reduced before development is complete but the hard problems have been solved. The land is being sold at prices which will repay the state and still leave it a bargain for the

home seeker. The applications on file for Delhi farms to be thrown open during the winter 1922-23 give every reason for confidence that all will be taken.

THE CAPITAL A SETTLER SHOULD HAVE.

No feature of state land settlement has given rise to more controversy than the requirement of the provision that the buyer of a farm should have at least \$2,500 and this question is constantly raised because many more people with less than this amount of money try to buy farms than apply who have more than this amount. It is, of course, impossible to fix a hard and fast line which would determine where a settler would succeed and where he would fail because of the difference in settlers, but four years' experience makes it certain that no one should attempt to buy a farm unless he has money enough to make his land and improvement payments for the first year and enough to pay 4 per cent on his entire development program. If he cannot do this, interest payments are going to be a load that will break most settlers.

It must be remembered that time is a most important element in the settler's success. Delays mean added burdens from accumulated interest payments and the settler's program should be so worked out that his own capital with the aid that the state gives will enable him to bring his land into full development at the end of the second year and to have a considerable part of it growing crops at the end of the first year.

STATE SETTLEMENTS ARE PRACTICE SCHOOLS IN AGRICULTURE.

If the sole purpose of the state land settlement act was to demonstrate the value of planned development, then the results already obtained would justify all the state has done. These settlements have shown that no more effective means can be devised to stop the drift of land born people to the cities and bring Americans back to the land. The business and social meetings of settlers in the transformed bunkhouse at Durham and in Wilson Hall at Delhi are teaching people to understand and love the soil, to manage animals and grow crops, and to understand the business of agriculture. No training school in this country shows better results than the one at Delhi in helping injured ex-service men regain their health and enjoy landed independence at the same time.

THE DEMOCRACY OF THE FARM LABORER'S ALLOTMENT.

It is perfectly feasible, as it has already been proven at Durham, for a laborer to advance in a few years to a small farm and it is also possible for a farm laborer to remain a farm laborer and yet to live a much more comfortable and self-respecting life than the ordinary landless farm laborer lives.—Leslie's Illustrated Weekly, December, 1921, p. 773.

The farm laborer's allotment is the greatest contribution to economic democracy and rural life which has been made since the disappearance of free land. It enables the man who works on the farm for wages to have a home of his own, to have a house, garden, shade, and fruit. It

gives to his wife and children the same sense of security and independence that are enjoyed by families of the farm owners. What people think of these homes is shown by the fact that last year 5000 people wrote to the Berkeley Land Settlement Office applying for one of these laborer's allotments or asking how they could get one. What settlers have done to improve these little patches of land, the promptness with which they have made their payments, and the fact that three of them have already saved enough to buy farms shows that the American will live in the country and will do the hard labor of the farm if he is given the right social and economic status. What he will not do is to stay in the country if he has to live in a bunkhouse or if his wife and children are denied social recognition.

At Durham and Delhi the farm laborers take part in the business meetings. They and their wives and children attend the community dances, take part in all the community functions, and meet with the families of farmers on a plane of unquestioned equality. Under such surroundings, farm labor takes on a new dignity. It opens up the door of opportunity to the boys and girls and helps to make them the farm owners of the future. Wilson Hall at Delhi and the settlers' community park at Durham are the centers of a social activity that is bringing back to rural civilization those interests and enjoyments that are native to the country and which must be developed to enable agriculture to withstand the influences and attractions of the city.

Figure 3. House on Farm Laborer's Allotment P, Durham Settlement.

STATE POLICY EFFICIENT.

Already firmly established in California, the community land settlement idea is now sweeping the country—the governments of many eastern states are studying the plan with a view to its adoption in reclaiming abandoned New England farms and the great stretches of unused land in Maryland and the old south.—*Collier's*, July 29, 1922, p. 26.

There are inserted in these pages brief quotations from recent discussions in important journals and reviews of the need of efficient methods for placing people on land as owners and of creating conditions which will make rural life more attractive and thus stop the drift of intelligent and aspiring people to the cities. These quotations show better than argument how widespread is this interest and how sympathetic is the approval of the efforts California is making to solve the fundamental problem of rural civilization.

During the past twelve months articles similar to those quoted have appeared in over a hundred magazines or reviews. They express the thoughtful opinion of our time. To this outside discussion there has been added an active interest in the progress of these settlements and with few exceptions a warm approval of the state's policy which created them by the state press. The interest thus created is reflected in the volume of correspondence which comes to the Berkeley office from all parts of this country and other countries asking for information about the policy and the method of making applications for farms.

During 1921 there were over 10,000 letters asking the conditions on which farms or farm laborers' allotments could be obtained. This interest in California and appreciation of the state's efforts to broaden the opportunities of poor men has been a great aid to rural progress outside of these settlements and it has made the securing of settlers for these colonies a matter of small expense and of no uncertainty. The settler gets the benefit of this and it is an important aid to his success. Recently inquiries were made as to the cost of capturing settlers in important colonization enterprises in different parts of the country. In Canada each settler costs on an average \$1,000. In Florida, Texas, and parts of the Middle West the cost ranges anywhere from \$500 to \$1,200 a settler. On the very high priced land of California it has reached as high as \$200 an acre and generally speaking it costs one-fourth of the selling price of the land.

The state settlements are a great contrast to this. There the only expenses have been the legal advertising which the law requires, the printing and mailing of circulars of information, and the expenses of a man and automobile to show land seekers over the property. "In all it does not amount to 1 per cent of the selling price of farms."

The Santa Fe and the Southern Pacific railroads have been of great assistance in securing a desirable type of settler. Through their agents and in other ways they have done much to make the country acquainted with the opportunities offered by the state settlements. The same is true of the state press which has kept the public informed regarding the progress of these settlements and the opportunities they present. In the main, however, the chief magnet has been the fact that the state offers men of industry and thrift, who have a little capital, a better chance to succeed, and gives them a more attractive social life, than can be secured under any unplanned development.

This reconstruction of rural life, the appeal it makes to young men and women, justifies a large expenditure by the state aside from any gain in wealth or population. But the reason for its continuance and extension does not rest on this but on the showing made that it is the most efficient and successful plan for bringing to full fruition our unused agricultural resources that has yet been tried or proposed. Wherever there are 5000 or more acres to be settled, no other plan will do as much to make the state the mecca of the best type of American farmers. None other will as quickly bring relief to land owners burdened with water charges or make secure our millions of dollars of irrigation bonds.

STATE SETTLEMENT AIDS PRIVATE DEVELOPMENT.

For years our arid states and the federal government have been grappling with the problem of failures on irrigation projects—it has remained, however, for the State of California to put in hand the first experiment in this country which strikes at the root of the evil.—Engineering News Record, December 5, 1918.

The opposition to continuing this policy comes in part from those who do not realize how far we have traveled from pioneer conditions. It comes from those who think the settler can still hoe his own row as he did when land was free. Many favor leaving settlement wholly to private enterprise because they object to the state managing any kind of business. That argument was once used against public schools and against the postoffices. They point out that the efforts of some private colonizers have undergone a radical change. Experience has shown them that it is worth while to care for the settler after he has been transplanted from his old into his new home. They say truly that some broad minded colonization companies are adopting the policy of extending generous aid to settlers. Some build houses, provide the settler with cows, pigs, and chickens, and hire some one to act as an advisor. The cost of these services is added to the price of the land. Some companies go further. They let settlers put all their money into improvements and allow land payments to be deferred for several years.

Not all, or even a majority of land selling agencies, however, are able to adopt this broad public policy and none of them can give the settlers as good interest rates as the state land settlement act gives which is a vital feature in the settler's progress and ultimate success. A majority find it easier to take the settler's money and forget him. Sooner or later, in all developing sections, the state has to take action to protect the settler from unfair practices or the mistakes of his inexperience. State regulation is, however, negative in its operation. It does little to aid or hasten development. Some states, notably Wisconsin, are helping to secure and finance settlers by having the state banking department approve the securities of colonization companies, the agricultural department to examine and certify to the character of the land and the immigration department to help make settlers understand what the state has to offer and to feel that they are welcome additions to its population.

Wisconsin has adopted a plan suited to the conditions of its cut over land which costs only a few dollars an acre and where nothing but

labor is required in its reclamation. It would be wholly inadequate as a means of financing the development of large holdings in California where land is high priced and where intensive culture requires that the farmer shall live in a good house, use good tools, and take advantage of all that science and skill can furnish.

The fact remains, also, that the greatest rural progress in the last third of a century has been achieved in countries which have adopted methods and policies closely resembling ours. Ireland, Germany, all the Scandinavian countries, Australia and New Zealand have each invested hundreds of dollars where we have appropriated one. They are doing it to increase wealth, to make themselves independent of outside nations, to hold people on the land, to check the increase in tenancy and end dangerous political unrest. The best citizen is the one with a stake in the land.

During the last two years the land settlement division has had many requests to buy large tracts of irrigated land. These have come from land owners and from the civic bodies of localities. Proposals have been made to sell land without any initial payments, the land owners to wait until the payments were made by settlers. What was wanted was the benefit of the land settlement organization and the expert direction of its officials. These requests for cooperation in development have aroused the sympathetic interest of all connected with land settlement work and the division has cooperated with these land owners in the study of their problems and their efforts to work out a solution.

In these investigations the University of California and the California Development Association have cooperated with this division in meeting the expenses of the investigation and working out problems. After this situation is studied, there is a cumulative impression that nothing is more needed than a definite program for the rapid development of a million acres of land that await settlement. If this is to be carried out, no single aid will be of more value than the \$3,000,000 bond issue authorized by the last legislature.

A \$3,000,000 BOND ISSUE FOR NEW SETTLEMENTS.

Eighty-eight per cent of the land in Denmark is being cultivated by small freeholders, who number 180,000. As fast as the few remaining big estates come into the market for splitting up they are outparceled to farmers and laborers who do not have to pay anything down on taking it over but pay a half-yearly tax of two and a quarter per cent on the amount at which the land was valued. They get help in building, payable by amortization—and the whole scheme is fundamentally similar to the colony of the State of California at Durham.—*The Country Gentleman*, September 16, 1922, p. 19.

At the last session of the legislature, provision was made for financing future colonies through the sale of state bonds. The reason for this action was that it could be better financed by the sale of bonds than by making appropriations from the state treasury. This action if approved will give settlers the benefit of low interest rates and long time credits on many millions of dollars because it will enable a large use to be made of federal land bank loans along the lines followed in the development of Durham and Delhi.

The policy thus briefly outlined will impose no added burdens on taxpayers. Our brief experience in California agrees with the long

experience of Europe, Australia, and New Zealand. All show that state land settlement can be made a solvent enterprise. The settlers repay all the money advanced, with interest. It gives social and economic benefits not obtained by private colonization because the state can command the requisite financial credit on better terms, state experts are particularly competent to select and acquire the land needed, and the state, through its agricultural departments and the College of Agriculture, has precisely the knowledge and influences needed to protect these farm communities against mistake and give practical application to the policies that are essential to their success.

There is no financial reason therefore why this bond issue should not be unanimously approved. The bonds will be secured by the lands purchased, by the capital and labor of settlers, and by the increase in land values which closer settlement and developed farms will bring.

REPORT OF THE PROGRESS OF THE DURHAM STATE LAND SETTLEMENT.

Earlier reports told how the first two units of the Durham State Land Settlement were made available in 1918 and all the farms sold. A portion of the tract could not be sold then because in 1917 it had been leased for five years. Arrangements were made with the lessees which enabled the Division to plow the land and sow it to oats in the fall of 1921 and throw it open to settlers in 1922. Necessary structures and ditches were constructed to adequately irrigate the allotments. Seventeen farms and six farm laborers' allotments were offered to settlers and all taken except three farms having a total area of 89 acres. These were applied for, but the applicants lacked capital. Buyers found their farms carrying a fine oat crop which yielded as high as three tons of hay per acre. This gave settlers an immediate cash return, and the crop was taken off early enough to permit a second crop, such as corn, beans, sudan grass, milo maize or garden stuff to be grown this year. Settlers also had ample time to plant alfalfa and orchards and begin their permanent agricultural development.

There remains 38 acres in the headquarters and 750 acres of pasture land to be disposed of later. All of this land is leased for grazing or farming purposes. Every acre of land is therefore a source of revenue to the state.

There are now 139 families on the settlement, made up of 105 farmers and 34 farm laborers. The laborers' blocks vary in size from one to three acres. They are used for vegetable gardens and fruit growing. The farms are mainly devoted to growing food for dairy herds and grain. Each year sees an increase in the fruit-growing area.

TABLE GIVING ACRES OF CROPS IN 1922.

Crop	Acres
Alfalfa	1,368
Grain and grain hay.....	1,622
Beans	145
Silage corn.....	103
Milo maize.....	132
Pastures, summer fallow, etc.....	1,649
Garden (commercial and home).....	68
Orchards	156
Miscellaneous crops	76
Total.....	5,319

Thirteen farms have been resold to new applicants by the original applicants, the sale in each case being approved by the Division. Eight of those selling carried away more capital than they brought to the settlement. Four were transferred from their original holdings to others more suited to their needs. Two who started on farm laborers' allotments, and one farm laborer who worked on the settlement, so increased their assets as to be able to buy small farms in the settlement.

FIGURE 4. Exhibit of Farm Products at Durham Community Fair, August, 1920.

One farmer sold his farm and bought a farm laborers' allotment. Six farms further subdivided now accommodate at least two families where only one lived at first.

The trend at Durham has been toward smaller farms. Settlers with only the land they could farm with the help of their families have done better than those who had to employ hired help or fail to cultivate.

Transfers and changes in size of the original farms have helped settlers get adjusted. It has promoted development and the satisfaction of those involved.

Cooperative Organization.

Earlier reports have told how settlers were helped to form a cooperative stock breeders' association. Under this they agreed to have only one breed of dairy cattle (Holsteins), one breed of hogs (Durocs). Only purebred registered sires were to be allowed on the settlement, and at first all the bulls were purchased by the association and owned by it.

It was to be a tubercular-free settlement. All cows were to be tested before purchase, and if the disease developed afterwards the infected animals were to be sold.

All these conditions have been maintained during the last two years with the exception that the association-owned bulls have been sold to breeding centers.

Other cooperative organizations have grown out of the parent one. The Dairywomen's Milk Chilling Association provides facilities for collecting, testing and chilling the milk of the community. The Durham Cold Storage Company has built a chilling plant to prepare milk for shipment in the summer and provide refrigeration space in which the different settlers rent boxes and are able to hold fruit, milk and fresh meat as long as desired.

The Dairywomen's Milk Selling Association has been a convenience and a money-making institution for the settlers. Instead of each settler having to operate a separator, this is all done by power at a central plant and the large supply which the community furnishes brings it more buyers than would care for the product of a single farm. Durham milk is now sold in the markets of Chico, Oroville, Colusa, Biggs and Sacramento. The sanitary character of the dairies and the fact that the milk is free from any taint of tuberculosis gives it a high reputation. One school at a considerable distance gets ten gallons of milk daily from the Durham plant to feed its children.

The settlers incorporated to build the refrigeration plant. The Land Settlement Division loaned them part of the money needed to complete and equip it. Its machinery is automatic. It chills the milk and holds the cool room automatically at a definite temperature. This cool room has 120 individual boxes which hold from 150 to 300 pounds of fresh meat. These are rented by settlers, and it has led to the local slaughtering of beeves, sheep and hogs throughout the season and is saving the settlers from paying the retail prices at the local shops. Ice is also sold by this plant at cost to those farmers on the settlement that desire it.

From a small beginning of \$40 a week, the Dairymen's Milk Selling Association has grown to a business of more than \$60,000 a year. The problem of marketing milk is of so much importance that it seems to warrant a full description of the methods adopted at Durham.

The milk is taken from each farm to a small plant at headquarters and it is divided into two classes, whole milk and milk to be skimmed and the cream sold as sweet cream. The skimming is done with a large turbine separator of 3200 pounds capacity per hour. It is separated by power and relieves each farm of disagreeable labor and time wasted in cleaning a large number of machines. The product is kept up to standard by daily tests of each member's product as it comes to the platform. The cream when received is run over a brine cooler and brought down to a temperature of 35 degrees, after which it is placed in the chilling room awaiting shipment. Whole milk is taken care of at the same time as the cream, utilizing a large tubular milk cooler and aerator. Whole milk is likewise chilled to 35 degrees and stored for shipment. Tests are made for acidity and sediment, which are indications of its bacterial content. In addition to this constant oversight by the operator of the central plant, the state dairy inspector takes platform samples intermittently for bacterial content. The settlers, who are directors of the association, make regular inspections of all the dairy units and insist on a high standard of cleanliness and equipment. There is a constant striving on the part of members to produce a better product in order to extend the market for whole milk, which pays better than cream. Concrete milking floors, separate milk houses, tubular water coolers and clean utensils are insisted upon.

The output is pooled and is not sold as the product of any particular farm, but as of the Durham Settlement. The dairymen are paid in accordance with the amount each member supplies and the price is based on the butterfat content. Testing for butterfat is done by the operator of the association, who is a licensed tester under the present law. The cost of operating the central plant is 5 cents a pound for all sweet cream based on its butterfat content and $1\frac{1}{2}$ cents per gallon for whole milk. It seems to be large enough to pay for the cost of operating and also to provide funds for the purchase of new equipment. This operating expense is deducted from the amount each supplier receives.

Payments are made twice a month. Each member receives a statement on his voucher check of the milk he supplied, showing gallons, test of butterfat, price obtained, cost of operating and net amount to him. This keeps him posted about the operations of the association. In addition, the members meet once each month. At this meeting the members talk over needed improvements, economies in operations, seeds and seeding, and any other things that enter into the efficient production of dairy products.

Durham settlers had the help of high war prices for their products in 1918 and 1919. Against this they improved their farms when all costs were high. Then in 1920 and 1921 they went on the toboggan, when the prices of farm products collapsed, when their purchasing

power as compared to operating costs shrank as is shown in the diagram below :

Diagram Showing the Decline in the Price of Farm Products from 1919 to 1922 and the Relation of This to the Cost of Buying and Operating Farms.

It will be seen that from January 1, 1919, to January 1, 1922, there was a drop of nearly 60 per cent in the purchasing power of what the Durham farmer had to sell.

This diminished value of what the settler had to sell is reflected in the settlers' payments.

The first two years they were made with remarkable promptness and for the full amount due, but as prices dropped the strain showed in the Division's receipts. Instead of being made promptly and for the full amount, payments would be made as the settler could raise the money and in whatever amounts he could get together.

If the Durham settlers had all had to depend on the local banks for money for development, half of them would have lost their farms during the last two years and the state would have been a nonresident landlord. In order to illustrate how narrow the margin is between success and failure, a complete statement of the expenses and income of two of them is inserted. The first is a settler who had experience in irrigated farming and who could take full advantage of all his opportunities.

Statement of a Typical Settler's Experience in the Purchase and Development of a Durham Farm, as Shown in the Record of Expenses and Income of John Doe in the Durham State Land Settlement.

Contract of purchase dated June 15, 1918. Date of actual settlement November 20, 1918. Approximately 44 acres at \$227 per acre; 30 acres graded and seeded to alfalfa at time of settlement; 10½ acres additional pasture land at \$25 per acre. Total value of land, \$10,280. Cost of preparing land for irrigation, seeding to alfalfa and building ditches, \$1,892. Total cost of land and improvements, \$12,172.

The settler lives in a good house, has good stock, sends his children to school. The family is active in all the community organizations. In spite of the hard times he has prospered.

What Would Have Happened Under Short Time Payments.

It is interesting, however, to consider what would have been his position if he had purchased the same farm privately and been compelled to depend on local banks for money needed to make improvements. If he had bought the farm on terms usually given in private contract, that is, one-fourth down, balance in ten-year amortized payments with interest at 6 per cent per annum, then borrowing for development would have been imperative. For this money he would have had to pay 8 per cent at the local banks, and there was a considerable part of the time during the last four years when it was difficult to borrow at all, even on the best of security. This settler would have only his chattels and equipment to offer as security. If we assume that his living expenses, insurance, irrigation water, cost of improvements, taxes, labor and income would be the same as he actually experienced,

the difference would be in interest and in land payments. He would not have done this well, because, if he had been outside the settlement he would have not had the economies of our cooperative marketing arrangement and he could not have obtained the price for milk that the Durham settlers have secured.

Table Showing what Would Have Happened to John Doe if He Had Bought His Durham Farm on a Ten-Year Payment Plan with One-fourth Down and 6 Per Cent Interest.

Operating account to December 31, 1918.

The deficit of \$2,159.09 could have been reduced by building a very cheap house, costing, say \$1,000, or a shack costing about \$500. The latter would cut his deficit to \$571.09, which would have been owing on land. As he has come to the point where no ordinary agency would extend credit of \$2,159.09 it must be assumed that he built the cheap house and started 1920 in arrears, owing on his payment contract \$571.09.

Operating account to December 31, 1920.

	<hr/> \$5,823 31		<hr/> \$5,823 31

As the live stock loan could hardly have continued as long as this, it is assumed that this is paid and default made on the land payment. He would have had to forego the electric lights and electric washing machine which he now has and which make his wife enjoy living on the farm. If he had built a house as good as the one he did build at Durham, his deficit in January, 1922, would be \$4,131.31. No ordinary vendor would allow it to reach this sum. It would be a hopeless

situation and John Doe would by now be moving back east or farming land as a tenant.

The stand of 30 acres of alfalfa which was on the farm when John Doe bought it gave him quick returns. Without this he states his comfortable house could not have been built. Something much cheaper would have had to answer.

This statement for 1921 shows how hard he was hit by the fall in farm prices. With more land under cultivation, more producing cows in his dairy and more to sell in every line, his income was \$1,920 less than for the previous year. He milked three more cows in 1921 than in 1920, but the cream checks in 1921 totaled \$1,560. Those in 1920 amounted to \$2,040.

He cut his living expenses and pulled through by saving and working harder. His payments on land and improvements were made in smaller sums and could not all be met when due.

Balance Sheet of a Settler Who Is in Arrears.

The statement of Richard Roe which follows is of an honest, intelligent, hard-working settler who had not had irrigation experience. He had been a grain grower like his father. When he came to Durham he wanted to follow the kind of agriculture he understood. He was also a mechanic and could earn good wages outside the farm. Against advice he tried to keep on growing grain and combine with this, working for wages. This accounts for the large labor income shown each year.

FIGURE 5. Prune Orchard on the Durham Settlement.

Statement of a Typical Settler's Experience in the Purchase and Development of a Durham farm, as Shown in the Record of Expenses and Income of Richard Roe in the Durham State Land Settlement.

Contract of purchase signed June 15, 1918. Date of actual settlement June 15, 1918; 70.32 acres at \$165 per acre, total \$11,602.80; 56 acres sown to barley by the board before settlement at a cost of \$816.

	\$15,872 80		\$15,872 80

His net worth has decreased from \$3,695 to \$2,734, a decrease of \$961 in four years. His position would have been much worse had it not been for the \$2,600 which the crop planted by the Division before the land was offered for sale, brought him.

A producing stand of alfalfa, some good cows and hogs, would do much toward changing this into a successful business venture. When he began grain prices were high, due to the war. The following year barley opened at \$3 per hundred but soon dropped. Its disastrous effect is too well known to be further discussed.

Since that time it has become more apparent each year that grain growing will not pay on the high priced land of irrigation districts.

FIGURE 6. Exhibit of Products from Farm Laborer's Allotment, Delhi.

DEVELOPMENT OF THE DELHI SETTLEMENT.

Location and General Facts.

The Delhi Settlement is located six miles south of Turlock in Merced County. It includes approximately 8600 acres of land which extends in a body about two miles wide from a mile west of the Southern Pacific Railroad to a point about a mile east of the Santa Fe Railway. Delhi, a station on the Southern Pacific, and Ballico, a station on the Santa Fe, are located on the tract. This tract of land was selected by the State Land Settlement Board in 1920 from eighty tracts of land offered to the board in all parts of the state. Selection was made after careful examination and appraisal of soil and water conditions by representatives of the College of Agriculture of the University of California, the U. S. Department of Agriculture and the State Engineer's office.

Soil.

The soil is classified as Madera sand, which is well suited to the production of alfalfa, potatoes (particularly sweet potatoes), melons, berries, grapes, nectarines, apricots and peaches. A special soil survey and soil map was made by Professor C. F. Shaw, who is in charge of the soil survey work in the state. It shows the soil conditions to a depth of six feet over the entire area. This map can be examined by intending settlers either at Berkeley or Delhi.

The surface of the land is rolling, with a slope toward the west of about eight feet to the mile. When purchased by the state, a portion

FIGURE 7. Wilson Hall, Delhi.

DELHI STATION S.P. RY.

FIGURE 8. Delhi Station, Southern Pacific Railway.

of the land was planted to grain, the balance being covered by alfilaria, foxtail and bronco grass with occasional fields of poppies, lupin and morning primroses, used generally as sheep feed. Climatic conditions are much the same as in all other parts of the San Joaquin Valley.

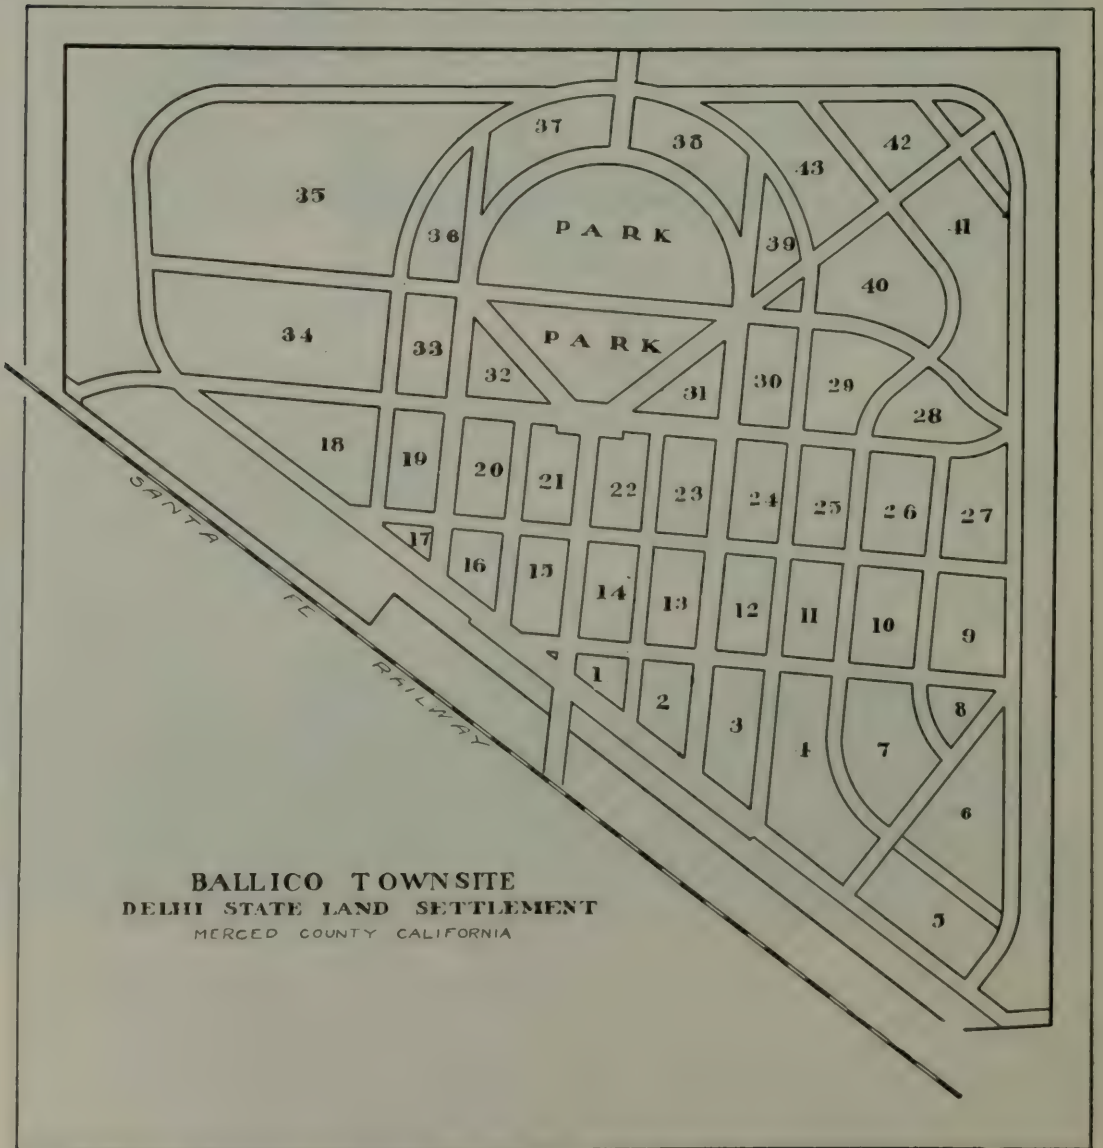

FIGURE 9. Townsite at Ballico on the Delhi Settlement.

Weather Conditions.

The summer temperature sometimes runs over a hundred degrees, but the nights are invariably cool. The following table gives the records for Merced for the past ten years, the annual rainfall of eleven inches making irrigation necessary :

TEMPERATURES AT MERCED, CALIFORNIA.

Irrigation Supply.

The land is a part of the Turlock Irrigation District, the oldest district in the state. The water right of the district is not only the first on the Tuolumne River, but is guaranteed by a congressional grant. A continuous head of water is diverted from the high line canal of the district to the main pipe lines belonging to the settlement. The allotments are divided into nine zones with a separate rotation for each zone. Each rotation is so arranged as to allow for a complete irrigation of each allotment within the rotation period. The settlers pay a portion of the cost of distributing the water through the pipe line in addition to the irrigation district tax.

Domestic Water Supply.

Domestic water is secured from wells on each allotment. Some use two-inch hydraulic wells which cost from \$35 to \$50, although the majority favor seven-inch cased wells. Many pump water by hand, some use windmills, some gas engines or electric motors in connection with overhead tank or underground pressure system.

Land Purchase.

The land was purchased in the fall of 1919. The first unit, comprising forty-nine farms and twenty-six farm laborers' allotments, was offered for sale at the first opening in May, 1920. The second unit was opened in September, 1920, and the third unit in January, 1921. The fourth and last unit will be opened in November, 1922.

Settlers.

Two hundred and twenty settlers have secured allotments at Delhi. Seventeen, or 8 per cent of this number, have left; 85 per cent sold their allotments for the full value of payments and improvements. This record in itself indicates sound progress. Of the 205 settlers now on the land, 109 settlers hold farms averaging 28 acres in size but ranging from ten to 175 acres, which is 77 per cent of the farms so far offered for sale; 43 hold poultry farms, ranging in size from 3.5 to 10 acres, equaling 73 per cent of all poultry farms offered for sale. Fifty-three hold 2-acre farm laborer allotments, or 90 per cent of the total number of laborers' allotments offered for sale.

Five thousand six hundred and forty acres of land have been offered for sale: 4174 acres, or 74 per cent, have been sold.

Eighty-two per cent of the settlers at Delhi are from California, the balance are from fifteen different states, from Canada, Australia and England. *About one-half of the total number are veterans of the United States Army.* The average age of the settlers is 40 years; the average capital is \$3,251. The total population of the settlement, excluding those who do not own land, is 550. Although all settlers have had some farm experience, many have made their living at various times from some trade other than agriculture. An incomplete census shows a representation from the following trades and professions:

Teachers—	Salesmen—	Miscellaneous—
High school	Auto	Aviator
Grades	Real estate	Hand-coloring photographer
Kindergarten	Traveling	African guide and big game hunter
Piano	Professions—	Band leader
Stringed instruments	Physician	Florist
Elocution	Osteopath	Orchestra players
Æsthetic dancing	Trained nurse	Radio operator
Engineers	Photographer	Movie machine operator
Civil	Banker	Farm adviser

	Plasterer	Policeman
	Sign painter	Cheesemaker
	Bookkeeper	Shoemaker
	Telegrapher	Mechanic, auto
	Carpenter	House painter
		Stenographer
		Fireman

Financial Returns.

Before the land was sold to the state, the annual return from rental for grain and sheep pasture amounted to about 50 cents an acre, or \$4,000. The income to the settlers for 1922, from but one-half of the total acreage bought by the state, is estimated at \$75,000. It is estimated that the value of the fruit alone, from the orchards now planted and to be planted in the immediate future, will be approximately \$1,000,000 a year. Certainly within six years from the time the first settler planted his first crop, the land will be producing close to a million dollars worth of wealth a year, as against an original rental value of \$4,000.

Crops.

Records in June, 1922, show 1369 acres in alfalfa, 347 acres in trees, 343 acres in vines, 100 acres in sweet potatoes; the balance being in corn, sudan grass, melons, or is still unimproved and not cropped.

Dairying.

The dairy industry has received first attention not only because the returns are more immediate than the return from fruit but also because the return is steady and assured. The development of a desirable type of dairy herd has been assured through the cooperation of the Dairy Division of the U. S. Department of Agriculture in the employment of Mr. C. V. Castle, a dairyman by profession and training. Mr. Castle resigned the position as head cow tester for the Western States to accept the appointment at Delhi. He has helped in the selection of cows, in the care, feed and management of the various herds, has organized a cow testing association and has conducted the testing. The settlement now includes 211 grade cows valued at \$25,320; 48 grade heifers valued at \$1,200; 32 purebred cows valued at \$11,200; 13 purebred heifers valued at \$1,950; 16 purebred bull calves valued at \$1,600. One of these calves has been sold to a Holstein breeder for \$200.

The average production of the cows has been satisfactory. The cows tested have topped the list of cow testing associations in California given in the Monthly News Letter of the Department of Agriculture for five months out of the seven months that records have been kept. For three months the average production per cow per month has exceeded 40 pounds. Several of the registered cows are on official test.

A bull association has been organized with three subblocks, each block handling one of the bulls owned by this association. De Kol

FIGURE 10. Holsteins in Barnyard of a Delhi Settler.

Pontiac Patti, purchased for \$864 from the Stanislaus County Holstein Breeders' Association, was the first bull secured. He was loaned to the dairymen of the settlement for a year and at the end of that time was taken over. This bull is out of Black Patti with a 914-pound record. He was sired by Segis Pontiac De Kol Dutch with 10 A. R. O. daughters. Four nearest dams of this bull average 1008 pounds of butter.

Aaggie Colantha Moreland is an aged bull bought from a purebred breeder of Denair who was retiring from active dairying. This bull was sired by Colantha Sir Pontiac Aaggie with 30 A. R. O. daughters, one with a record of 35.03 pounds of butter in seven days and another with 32.87 pounds of butter in seven days. Sir Ormsby Akkrummer Korndyke was purchased from John B. Irwin of Minneapolis. This bull combines some of the greatest blood of the breed, through Miss Korndyke Akkrummer Ormsby to Hengerveld De Kol and through Sir Ormsby Banastine Champion to Duchess Skylark Ormsby, the world record cow with 1606 pounds of butter in a year. This sire is the youngest son of Pietertje Maid Ormsby, for which the owner refused \$40,000.

The Holstein breed has been selected as the breed for the settlement. No tubercular cows have been purchased and all cows are tested every six months and all reactors are eliminated.

Alfalfa.

Alfalfa is the foundation of the dairy business in Delhi. The land is irrigated by the border method, the lands varying from 20 to 30 feet in width and from 250 to 500 feet in length. The 25-foot lands, 250 feet long, are most satisfactory. It costs from \$15 to \$35 per acre to prepare the land for the border method of irrigation, \$22 being a fair average charge. Alfalfa is planted in September and October if the land can be irrigated before seeding; otherwise, any time from November 15 to March 1. Nurse crops are not generally used. The fields are usually

covered with straw, manure or corn stalks to prevent damage by wind in the early spring. Rye is often sowed on the borders as a wind protection. Three or four hundred pounds of gypsum to the acre, or 100 pounds of sulfur and 300 pounds of lime to the acre, increases yields and has proven profitable. The gypsum is usually applied each year, while the lime and sulfur will last for four or five years. When fertilizers are used, from one to two tons are secured at each cutting. Five cuttings are secured regularly, while six and seven cuttings are not infrequent.

Fruit.

The production of fruit, especially peaches and raisin grapes, will ultimately be the most important industry in the settlement. The soil is well adapted to the production of good peaches. It costs from \$8 to \$20 per acre to prepare the land for planting; \$15 would be a fair average. Cling peaches dominate, although some free stones have been planted. Varieties so far include: Phillips, Tuscan, Palora, Peaks, J. H. Hale, Elberta and Lovell.

Thompson seedless and Malaga vines are the two varieties of grapes planted so far. Cuttings of a new seedless grape known as the Black Monukka and cuttings of the Red Malaga have been planted this year and will probably be planted extensively. Commercial fertilizers are not used now on trees and vines, although fertilizing trials are being made in demonstration orchards. Cover crops are being tried out and will probably be grown extensively in the near future.

The production of fruit is essentially a community enterprise. The problems of buying and planting trees, of pruning and care, are con-

FIGURE 11. Two-Year-Old Thompson Seedless Grapes on a Delhi Allotment.

sidered not only as individual problems but as necessary to the best interest of the entire settlement. Good healthy trees are possibly more important than good healthy cows on account of their permanence.

Truck Crops.

Sweet potatoes have proved to be the most satisfactory cash crop. The soil is well suited to the production of very fine quality potatoes. Eastern seed was purchased from New Jersey by the settlers in the spring of 1922. Careful selection in the field is to be practiced so that the production of quality potatoes can be increased. Although melons do well in Delhi, the market conditions do not warrant extensive planting. Settlers are advised to go into melons on a very small scale, if at all. Cucumbers, summer squash, egg plant, lettuce, etc., do well and commercial plantings are being tried.

Poultry.

The poultry industry is growing rapidly. Not only are there a number of poultry specialists but nearly every settler has a farm flock of considerable size. There is a total of 20,000 hens in the settlement, with about a mile of poultry houses with capacity for 30,000 when fully stocked. This is just a beginning. The soil is a distinct advantage to the poultrymen. Alfalfa forms the basis for green feed, although other green feed is raised. As Delhi is in the center of a grain area, scratch feed can be mixed by settlers to advantage. White Leghorns are most commonly raised, although Rhode Island Reds and Plymouth Rocks are raised by some. The poultry farms range from 3.5 to 10 acres. Two or three acres are planted to alfalfa for poultry and cow feed. The balance of the land is usually planted to trees which fit in very nicely with the poultry development.

Marketing.

Marketing is carried on very largely through existing cooperative associations. The grape growers have joined the Associated Raisin Company. The dairymen belong to the Milk Producers Association of Central California. The peach growers have joined the Peach Growers Association. The poultrymen ship to the Poultry Producers of Central California and the sweet potato men ship through the Sweet Potato Growers' Association. The problem of marketing staple products is too large for a community to handle as a community enterprise.

Cooperative Buying.

Buying is rather extensive in a new settlement. In 1922, \$23,000 worth of supplies were purchased cooperatively. This included trees, vines, fertilizers, manure, brooder stoves, coal, posts, fencing wire and trellising wire, alfalfa seed, hay, tree protectors and sweet potato seed. Implements were purchased in 1921. There was a saving in the price in all cases. Coal, for example, was delivered to the homes for \$17.50 per ton as against a price of \$20 in town undelivered. The main benefit shown was in the service rendered. Instead of having each settler go over the country looking for sweet potato seed and bidding against his neighbor for the supply, the seed was purchased by a committee appointed by the settlers. In the purchase of trees and vines care was

taken in the selection of the stock and in protection from disease and insect enemies. Due to the fact that orders were put in very late, it was impossible in many cases to get the trees desired and as a result the stand is not satisfactory in several cases. All vines were purchased from areas where phylloxera and nematode do not exist and as an additional protection all vines were treated before being brought into the settlement. In the future, the buying of trees and vines will be

FIGURE 12. Poultry House on Delhi Settlement.

carried out by settlers acting as regularly appointed agents of nurseries approved by the settlers association. This arrangement assures better care with the trees than is possible under the system previously followed.

Assistance Given to Settlers.

Advice and help was given to the settlers in various ways by the Division of Land Settlement. The help given on building programs and farmstead layouts is given elsewhere. Practically all of the land leveled in the settlement has been done under the direction of engineers employed by the state. The original layouts were first agreed upon by the settler and the superintendent. Bids were then secured on the work if it were to be done by contract, and the job was let to the lowest bidder provided he was able to do the work satisfactorily. Specifications were drawn up which were signed by both the contractor and the settler. Payment was usually made through the state, although contracts were not signed by any state representative. Whenever a settler could do his own leveling he was urged to do so. This work was planned and supervised in the same way as though a contract were let. A charge was made for actual time spent by the survey parties in

the field. No charge was made for topographical maps giving elevation to a foot contour for suggested layout, or for time spent by the superintendent in planning the layouts, drawing contracts or supervising and accepting the work. The cooperative buying was conducted through the Delhi office of the Division. The problem of variety was taken up through the cooperative association with individual settlers. Orchards and vineyards were often staked out by men employed by the state but paid by the settlers. In practically all cases orchards and vineyards were properly oriented by the engineering field crew. Meetings were held to discuss important agricultural problems and outside speakers were secured when necessary.

The help of professors from the State University has been continuous and of great value. Three field demonstrations on vineyard care were conducted by Professor Bioletti of the University of California, at which time practically every vineyard in the settlement was visited. Mr. Quail, assistant farm adviser, held one field demonstration on the planting, care and pruning of young trees. Professor Phelps spent three days in the settlement visiting each orchardist and going over individual problems of care and pruning. Professor Whitten spent some time in the settlement studying the problem of fruit varieties and later gave his advice in a long and carefully studied letter. A synopsis on sweet potato culture was prepared by Professor Carey for the Delhi settlers. This was used in connection with a field demonstration in starting off on sweet potato culture.

Two dairy trips through Stanislaus County, a poultry trip to the Rio Linda Colony at Sacramento, another to poultry establishments near Modesto and another to Petaluma were carried through during the year. Professor Dougherty spent a day in visiting the various poultry farms and in advising the poultrymen regarding their problems. He spoke on poultry feeding at an evening meeting of settlers.

Mr. Castle keeps in daily touch with the dairymen, advising them on all phases of their work. His advice and help has been invaluable.

Professor De Ong of the University of California made a special trip to Delhi to advise about the control of army worms. One of the allotments was used as a demonstration and various methods were used. Individual farms were visited whenever any damage from army worms was reported and every relief measure known was employed with satisfactory results.

Delhi News.

In addition to very numerous farm calls, office consultation and letters, information and advice was given through a mimeographed paper called the "Delhi News." This paper is put out weekly and the effort is to incorporate in each issue important and timely agricultural problems of a local nature. When sweet potatoes are to be planted, the various steps are followed through in detail. When alfalfa fields should be covered not only is the matter brought up repeatedly, but in many cases the state actually performs the work at the request of the settler on account of a rush, the cost of the work being charged to the settler. All notices of meetings, social events, new arrivals, etc., appear in the paper.

Experiment Farm.

The University of California has established a forty-acre experimental farm, largely for working out irrigation problems relating to the type of soil found in the settlement which is a representation of a large area in the state. This farm is planted to alfalfa, trees and vines and serves as a demonstration of varieties and methods as well as serving as an experimental field for scientific research.

Veteran Welfare Board.

The Division of Land Settlement is cooperating with the U. S. Veteran Welfare Board in training men in agriculture, who have received some disability during the war. Twenty-one men are now on the list, twelve of these men are on the settlement and nine reside within a short radius of it.

Each man is visited once a week by a federal training officer employed by the Division of Land Settlement, and given personal help in working out his program. Each man has been located on a home project which he expects to develop into profitable agricultural enterprise, with dairying, poultry raising, fruit culture or general diversified farming as objectives.

Those who buy land are first asked to make out a careful budget showing just what is to be done with the money received from the government as a monthly allowance. This budget usually runs for a period of at least two years. It is usually made out with the help of the training officer and the superintendent and with data furnished by the Division of Land Settlement. This program is adhered to as closely as possible both in handling the money received from the government and the money loaned by the state on improvements. A certain stipulated sum is allowed for living expenses, the balance is put into improvements. Before a trainee is accepted as a settler he must have an assurance of two years training by the government if he has \$1,000 or more in cash, or three years training in case he has no cash on hand. With this help any industrious man should be able to meet his obligations and develop a profitable farm within the time allotted.

The Land Settlement Act of California provides for loans to settlers not to exceed \$3,000 to any one individual. No money is advanced to any settler until his own money has been spent on development. The state can then advance 60 per cent of the value of the improvements, the money to be spent in further development.

So far \$145,961.79 have been passed in loans to 133 settlers. This is outside of loans on pipe lines aggregating \$175,000 more. The largest individual loan is \$1,511.92, the smallest \$25.50. The largest amount loaned to one settler has been \$2,519.

Social Life.

The social life of the Delhi Settlement centers about Wilson Hall, a \$10,000 community center, made possible through the donation of \$5,000 by Edgar M. Wilson of San Francisco. The spirit which Wilson Hall embodies is expressed in a bronze tablet in the entrance

hall which carries an inscription written by ex-President Benjamin Ide Wheeler of the University of California:

"Wilson Hall typifies the neighborhood spirit wherein men are social beings rather than machines, dwell in homes not laboratories, and lead the old Town Meeting out into the service of the new economic democracy.

"From the beginnings of human civilization, the irrigation trench, in Egypt and Babylonia, taught men to work together. Today history is written in terms of such works as the hospital, the library, the church and the schools. Joint credit, security of life, and community health have laid the basis of a cooperation, rich in sympathy and keen to serve. For what is a man profited, if he shall gain the whole world and lose his own soul?"

Here the community meets to transact community business, to meet in a social way at dances, parties, socials, plays, lectures, etc., and to conduct religious services. The hall was dedicated on September 29, 1921, by Wm. D. Stephens, Governor of California, under whose administration the Land Settlement Act was passed. A tour over the settlement occupied the afternoon. A barbecue was served in unique style from the overhead carriers at the pipe shed for supper. The city of Merced, the county seat, closed its doors for the occasion. Bands were brought from Merced and Turlock for the occasion, which proved to be a memorable one.

BUILDING AND FARMSTEAD ENGINEERING.

Activities.

The activities of this department embrace not only planning, designing, quantity surveying, obtaining competitive bids, letting contracts, and supervising construction of all classes of farm, townsite and administrative buildings, but include also making individual farmstead layouts for all settlers, determining location and arrangement of buildings, lanes, corrals, poultry runs, domestic wells, orchards, vegetable gardens, etc. Individual settlers are acquainted with health recommendations relative to sewage disposal, protection of domestic water supply, insurance rates and hazards, requirements of good practice in plumbing, electric wiring, paint formulas, concrete mixing, chimney construction, carpentry, etc. Buildings are appraised and values set as basis for loans, and buildings rented are scheduled by this department.

Active interest and support are given to community development, services being extended to school board and Settlers' Cooperative Association. This included designing and supervising construction of the Community Hall at Delhi recently completed.

Objects of Service.

Through this department the settlers' time has been conserved and better buildings have been built at less cost than would have been possible had each farmer been obliged to make repeated trips to town for materials and assistance.

It has been demonstrated beyond question that when buildings are properly designed, planned and built to meet individual requirements,

contentment and success are more liable to follow than in cases where no organized effort is at work.

Loans made by the state are more securely protected and appraisals of building improvements are more accurately made with costs and building data amassed by this department as a basis.

Operation Methods.

In cases where a settler is more or less of a mechanic, and is in a position to do his own building, he is advised to do so. In all other cases the contract system has proven most satisfactory. In either case a complete set of plans is furnished.

FIGURE 13. Alfalfa and Buildings on Farm Allotment, Delhi.

Under the contract system a set of specifications is drawn, and after the plans and specifications have been approved by the settler, the work is advertised for bids in the open market in accordance with regulation practice. Sealed bids are received and opened at a predetermined hour in the settler's presence. If accepted, and upon receipt of authorization with accompanying deposit by the settler, a contract is entered into between the state and contractor, and work proceeds under the supervision of the farmstead engineer, acting as agent of settler until completion and acceptance. The contractor's accounts are audited and the full responsibility is removed from the settler until he accepts the work as complete and satisfactory to him. This service is a complete architectural professional service. The contractor is responsible for accident to his workmen or the public, for loss by fire, and is under bond for faithful performance of the contract.

Where a settler is able to do his own building work, a quantity survey of the materials required is made, and competitive bids taken on these materials in the same way that bids are taken on labor and material contracts. The settler is furnished a copy of the material list to serve as a guide, the list giving instructions for the cutting and placing of various items thereon.

Wherever it has been possible to purchase building materials in car-load or large quantities by grouping orders, this has been done to give the settler the benefit of the state's purchasing power.

By a careful system of checking contractors' accounts, and by requiring detailed statements from settlers before loans are made, labor and materialmen are given positive protection, saving them collection costs and making their business through the state very desirable. This is an important factor in keeping down costs.

Our well established contract system with its uniform and well known methods of procedure has earned the confidence of local contractors and has created a wide and keen competition.

Extent and Cost of Buildings to Date.

The first building contract was awarded March 4, 1920.

Today there are 454 buildings on the settlement, having been erected at the rate of a building every 1.5 working days.

Three hundred thirty-nine are farm buildings on 132 farms at a cost of \$177,749, including domestic wells, or \$1,346 average per farm.

There are 86 buildings on 51 farm laborers' blocks at a cost of \$51,788, including domestic wells, or an average of \$1,116 per farm laborer's block. There are 26 administration buildings representing a cost of approximately \$85,000.

The Wilson Community Hall cost \$10,000.

The total value of all buildings on the settlement, including domestic wells, amounts to \$325,000.

Over \$170,000 of this amount was spent under contract. There was produced by settlers' labor \$81,000 from plans furnished by use. There has been spent \$72,000 following settlers' plans, but with construction supervised by this department.

Ten per cent is a conservative estimate of the cost saved by this department in letting the work under contract. Still greater saving is effected through the intelligent planning of buildings and by the utilization of the most suitable materials and of standard sizes that avoid waste.

Where special plans have to be prepared a charge of 3 per cent of the value of the work is made by the Land Settlement Division. Where stock plans are usable the charge is 2 per cent, which has made this department self supporting, considering its contribution to general administration. It has also produced administration buildings at 3 per cent of their cost.

Dwellings.

As in the case of all other buildings, the determination of the amount to be expended and the type of each dwelling to be erected is based on a personal interview with the individual settler and a thorough knowledge of his requirements. There are three distinct ways of commencing

the dwelling program, requiring earnest consideration. A dwelling may be designed with only the ultimate needs in mind, and more or less without regard to cost, being so planned that it may be built in units within reach of available cash.

The shell or skeleton of the dwelling may be built with a view to completing it in installments during winter months and odd times or as capital permits, or a temporary dwelling of a type suitable for converting to some utility use may prove most satisfactory. The latter type is the cheapest, for all of the material within it peculiar to a dwelling may be salvaged for later use in a permanent structure, leaving a higher type of utility building than perhaps could have been afforded otherwise. The complete unit costs the most for a corresponding amount of space, for the reason that it is built with permanency in view.

Personal characteristics of the occupants play an important part in determining which path to follow. The "temporary" dwelling must not become permanent, the shell is not satisfactory unless completed and new units should follow with increases in the family and expansion.

Poultry Housing.

The type of poultry house adopted at Delhi as a standard is the University of California recommendation with a shingle roof and other minor exceptions.

There is on the settlement today poultry housing capacity for 30,000 laying hens. If built end to end the housing would be a mile long.

Over 23,000 of the total capacity is in the standard house at a cost of \$22,120, or 95 cents per hen.

Remaining poultry houses are of various designs at a cost of \$7,862, or \$1.18 per hen.

Other Buildings.

The California type of barn with central hay storage and with wings at either side is the most economical type, and lends itself very well to erection on the unit system. Barns are located with relation to other buildings so that grade "A" dairies are possible. The smaller barns are designed so that it is possible at a later date to convert into general purpose buildings such as are more suitable to an orchard or vineyard development. Plans are under way for the erection of the first silo, which will be of the Farm Bureau wood hoop type.

Domestic Wells.

There are 84 1½-inch and 2-inch hydraulic wells and 62 7-inch cased wells on the settlement. The 7-inch cased well is recommended for domestic supply and the average depth of such wells on the settlement is 66 feet with 55 feet of casing at an average cost of \$108. The water stands in the wells at depths varying in the settlement from 14 feet to 25 feet with a limited few of a greater depth and an average of approximately 18 feet.

Loans.

Loans to settlers on buildings are based on itemized statements of cost and bills, and receipts produced by the settler, checked against current costs and backed by personal inspection and appraisal.

There has been loaned on buildings and wells \$95,000, over \$70,000 of which has been certified on 171 separate certifications of inspection and analysis, the remainder on 49 separate improvement and construction contracts.

ENGINEER'S PROGRESS REPORT FOR YEARS 1921-1922.

Within the past two years, 4174 acres of land in the first, second and third units have been provided with main and lateral concrete pipes for irrigation, while main pipe lines have been installed to serve 6000 acres. Mr. M. B. Williams, formerly chief engineer of the project, designed the entire system. He advocated concrete pipe because of the undulating character of the ground surface and the impossibility of reaching high areas with open ditches. Concrete pipe has many other advantages, however, namely:

1. Saving of water in transit that would otherwise be lost in seepage and evaporation.
2. Reduces land leveling to a minimum.
3. Saves land that would be used for ditches.
4. Facilitates the passage of farm implements.
5. Delivers water under pressure, reducing cost of farmers' laterals.
6. Reduces maintenance of irrigation system.
7. Greater convenience in irrigating, resulting in saving of labor.
8. Minimizes drainage troubles in light soils.

Concrete pipe mains to serve farmers' laterals extend throughout the whole colony. These mains have their intake at several points along the high line canal of the Turlock Irrigation District and from wells.

FIGURE 14. Tile Yard, Delhi Settlement.

In the design of the first and second units it was assumed that 90 per cent of the total acreage under the system might be irrigated during any one month, also that one-half of this acreage might be in alfalfa with a monthly requirement of eight inches per acre, and the other half might be in orchard, vineyard or field crops with a requirement of six inches per acre per month. In the third unit the total area was divided into several zones, each to be supplied by a separate main. The requirement of each zone was computed separately on the basis of six inches per acre every twenty-one days over the whole area of the zone. Starting at the extreme end of the zone, the proper size was determined to deliver the required amount of water starting with small pipe and increasing in size toward the intake. Sizes of mains were determined by Table No. 6, Bulletin No. 852, on the "Flow of Water in Concrete Pipe," by F. C. Scobey, U. S. Department of Agriculture, and range in size from fourteen to thirty inches. Areas of approximately the same elevation were placed in separate zones so that excessive strains would be avoided in passing from high to low ground.

In general, the mains were reinforced through swails for heads exceeding twenty feet. Reinforced bands around the pipe, consisting of a strip of three-fourths inch square mesh ten inches wide, imbedded in the joint mortar, were placed every twenty feet to prevent crack runs in case of rupture of the pipe through water hammer. On some mains the additional precaution was taken of pouring a block of concrete around the pipe every 200 feet to guard against possible runs. Air valves or vents were placed on all high points to permit escape of entrapped air which might reduce the carrying capacity. Before any pipe was laid, the subgrade was carefully checked by a level crew to avoid air pockets. Overflow spills were provided on all mains usually returning the excess water to the canals. Open surges ranging in size from 30-inch concrete pipe to 8-inch sheet metal pipe were provided to protect the pipe against impact.

Wherever possible, main lines parallel public highways, which greatly facilitates the distribution of water as well as repair work.

Farmers' laterals range in size from 8-inch to 14-inch. In a very few cases 6-inch and 16-inch pipe were used. For a flow of two second-feet, the prevailing alfalfa head, a 12-inch or 14-inch is most commonly used. For orchards, vineyards and field crops 10-inch pipe has been generally used. Nos. 8 and 10 orchard valves with stands containing two 4-inch galvanized iron distributing gates with tubes are working very satisfactorily for orchard and vineyard irrigation. It is probable that stands will ultimately be placed at the head of every row of trees and every other row of vines. Ten and 12-inch alfalfa valves, placed at the head of every other border, or fifty feet apart, has been the usual practice on alfalfa irrigation.

Pumping Plants.

Twelve electric pumping plants have been installed. Their capacity ranges from $2\frac{1}{4}$ to 10 cubic feet per second. Five of them boost water from the high line canal to lands that are above it. Seven pump water from wells into the pipe lines. Another $3\frac{1}{2}$ second-foot double suction centrifugal pump lifts water from the Merced River to four farms not connected with the main system.

The purpose of the wells is to supply water for trees and gardens after the gravity supply in the canals runs out, but they are serving another useful purpose in helping to maintain a low water table. The wells are principally of a 12-inch bore, ranging in depth from 80 to 200 feet, with an average of 125 feet. The water level is now held and the distance to it varies with the elevation of the ground surface, ranging from 42 feet as an average on the eastern third to less than 20 feet on the western third. The draw-down of wells during continued pumping varies from 13 to 30 feet. The lifts range from 15 to 27 feet. All of the electric pumps are mounted on substantial concrete bases and are covered by sheet metal houses. Sand traps, consisting of 10 feet of 30-inch pipe laid horizontally with a flushing gate, were installed underground at all wells.

Structures.

All structures have been made of concrete. Two hundred and twenty diversion chambers have been installed which include canal intakes and diversion chambers for farmers' laterals off the concrete mains. The latter consist of sealed gates, capped stands and open pipe surges containing shut-off gates. The sealed gate chamber and the capped stand were both developed by engineers of the Delhi Settlement. The sealed gate chamber is best adapted to diverting water from a main in more than one direction. The objective aimed at was to divert water under pressure from the ground surface without ascending a tall surge to reach the gate handles. It consists of a square concrete chamber capped with a $\frac{1}{4}$ -inch steel boiler plate which is drawn down firmly against a flax gasket by bronze bolts. The stuffing boxes for the gate handles are acetylene welded to the cover. The chamber is placed in the ground so that the cover is flush with the ground surface. This structure was at first poured in place but it was later found more economical and satisfactory to construct the complete unit in the pipe yard.

As the sealed gate chamber was rather expensive for a one-way shut-off, a capped stand made of concrete pipe was developed. They are used to divert water from a main line as well as for shut-off gates in a large system.

The capped stand consists of concrete pipe for a gate chamber with another one-half joint of pipe closed at the top for a cover. A $\frac{5}{8}$ -inch square flax gasket between the cover and the lower pipe containing the gate prevents escape of water. The pipe cover is held in place by four $\frac{5}{8}$ -inch galvanized steel rods on the outside of the stand which are anchored in the concrete base. A cast iron spider imbedded in the cover with extensions over the sides receives the four rods. The stuffing box for the gate handle is in this case imbedded in concrete cover. The spiders, stuffing boxes and rods were all made of an original design. Before installing these structures, tests were made in the yard until the desired strength was obtained. Over 100 of these shut-off gate structures were installed last year.

Three Collins flow indicators were set in main lines at the main intake on the High Line Canal for the purpose of proportioning divided heads and measuring the flow of water. They read direct in gallons per minute.

No attempt has been made to measure water at the individual farmer's intake. In all probability this will never be necessary with the abundant supply of water available from the Don Pedro Dam.

Surveys.

A topographical survey of the entire colony was made in 1919 and 1920 by J. R. Jahn. By using a rod with a logarithmic scale of his own design, it was possible to take unusually long sights accurately. Points 2000 feet from the instrument were frequently read. From one set-up 160 acres could be taken. Four men frequently took topography on 160 acres in one day, taking 1100 to 1300 sights. The topographical maps on a scale one inch to 100 feet were used as a basis for subdivision and the design of the pipe system.

Rather than divide the settlement into arbitrary rectangular units of 10, 20, 30 or 40 acres, regardless of their ability to be irrigated, it was subdivided so that each farm could be irrigated to the best advantage with a minimum amount of pipe. Wherever possible property lines follow the swales. Where two men irrigate toward a common depression, each has the incentive to guard against flooding the low ground. The corners are being marked with permanent concrete monuments to avoid later disputes.

Farm Layouts.

Blue prints of each allotment on a scale of one inch equals 100 feet were made, showing the proposed pipe system. These maps have been distributed to each settler free of charge.

Leveling Contracts.

Two men were employed through the leveling season to assist the settler in securing land leveling contracts and later to check the work of the contractor. The settler was billed for part of this service.

Pipe Manufacture.

Approximately \$41,000 were expended in constructing and equipping the Delhi concrete pipe factory. The fact that the pipe factory can be operated either day or night twelve months in the year and the low operating cost due to labor saving equipment have justified this expense. Without adequate shed space, it would be impossible to manufacture a quality product in the blazing summer sun or in freezing nights of the winter. Like wise, it would have been impossible to turn out the quantity of pipe needed to complete the irrigation system in time to water the farms already sold and settled in the first, second and third units without a factory of sufficient capacity.

The factory is located on one of the Delhi railroad spurs. Practically all materials are shipped in. There is bunker space for ten carloads of materials. The mixers are placed close to the material piles so that no rehandling of material is necessary. The smaller sizes, 6-inch to 16-inch, are made with a Brubaker packerhead machine. There is sufficient shed space so that four to five days run of these sizes can be cured under cover. In the summer, the pipe attains nearly its full strength in four days. The green pipe on 4-foot by 8-foot platforms is conveyed from the pipe machine to the curing rooms by Louden overhead

carriers. With this system, one man spends one-half of his time at this operation. Some other systems require three men for this operation. The curing room is provided with an overhead Skinner sprinkling system which throws a fine mist over the pipe, making ideal curing conditions. Pipe is conveyed from the sheds to the storage yard on the same platform by the overhead carrier where it is unloaded and piled. There is storage for 200,000 feet in this end of the yard. The pipe is kept wet outside until ten days to two weeks old.

The concrete pipe aggregates consist of $\frac{1}{2}$ -inch pea gravel, coarse sand, fine canal sand and pulverized limestone for a filler. They are proportioned so as to yield concrete of maximum density and strength. This is accomplished by making mechanical analysis tests from time to time and checking the curve of the mixed materials against a standard curve devised by the engineering department for this particular purpose.

The proportion of cement to aggregate is 1 to $4\frac{1}{2}$ for the smaller sizes. No pipe is cement washed inside, as the walls are sufficiently dense to prevent seepage.

Pipe 18 inches to 30 inches in diameter is made by pneumatic tampers. There is shed space for two to three days run from two crews. This pipe is rolled outside under an overhead Skinner sprinkling system where it is kept continually wet for from ten days to two weeks.

Settlers fill practically every job in the factory. When running to capacity, thirty men are employed. All the men of the machine crew receive 50 cents per hour plus a bonus for every joint over a fixed day's run. The crews on large pipe work on a piece rate basis. Miscellaneous work pays 40 to 50 cents per hour.

The following table shows the daily capacity of factory per crew:

Size	Average output per crew in feet	Number of men on crew	Method of manufacturing
30-inch -----	180	5	Air tamp
24-inch -----	200	5	Air tamp
20-inch -----	240	5	Air tamp
18-inch -----	280	5	Air tamp
16-inch -----	900	7	Machine
14-inch -----	1,050	7	Machine
12-inch -----	1,150	6	Machine
10-inch -----	1,100	6	Machine
8-inch -----	1,100	5	Machine

During the rush season the pipe machine was operated sixteen hours a day, while two crews worked one shift on the large sizes. The maximum output in any one day on the machine was 3000 feet in sixteen hours.

The maximum run for one crew on large pipe was 520 feet of 18-inch in eight hours.

The average output for all sizes is from 2500 to 3000 feet per day.

The total output for two years has been 580,000 feet, or 110 miles.

Tests of cured pipe were made at certain intervals to check the quality of the pipe. All pipe tested met the standard strength requirements of the California Associated Concrete Pipe Manufacturers; that

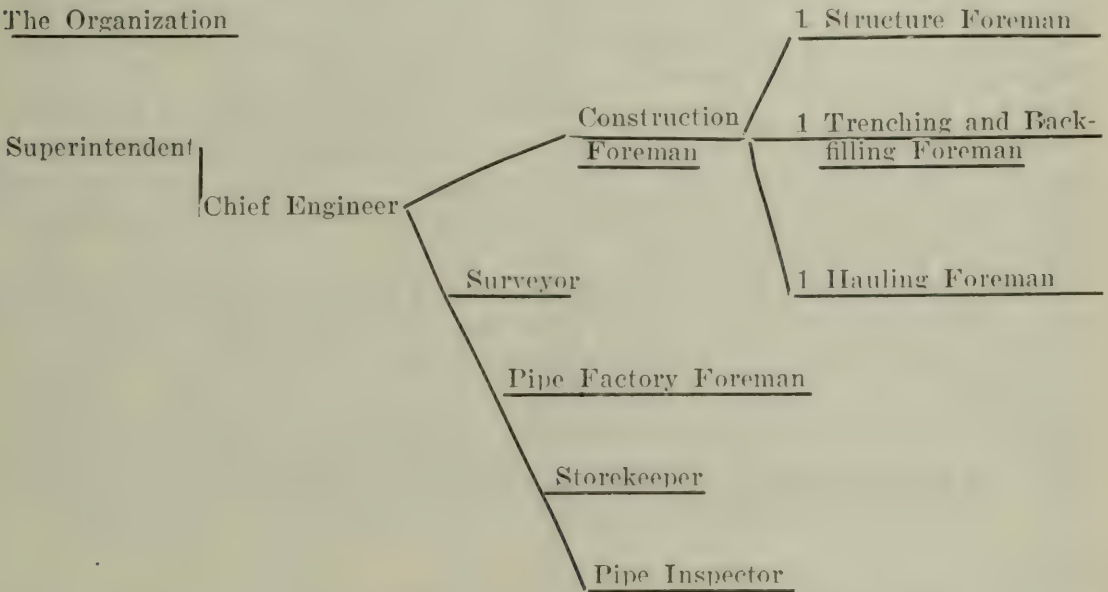

is, a tensile strength of 200 pounds per square inch. In one case a tensile strength of 590 pounds per square inch was attained on a 12-inch pipe. An 18-inch air-tamped pipe showed a tensile strength of 514 pounds per square inch at the age of one month.

Much assistance has been obtained from the California Associated Concrete Pipe Manufacturers, both in planning the factory and making tests.

During the past year Mr. T. M. Temple has had charge of the factory, spending his whole time in supervision during the rush season and part time during the summer months.

Installation.

The Organization

The attached tables show the unit installation cost for years 1920-22.

To date, 501,353 feet, or 95 miles, of concrete pipe have been installed. The pipe laying was all contracted. The contractor furnished cement and lime and hauled all materials except concrete pipe. The Merced Pipe Company of Merced and John R. Kristrich of King City have laid most of the pipe. Last spring two crews of layers from the settlement were used for several months. The average price for laying is shown in the tabulation.

The bulk of the work was done between November and April of both years. During this period the soil is moist and in good condition to cure mortar around the joints. The trenches also stand up well when the soil is damp. The maximum footage of pipe laid in any one month was 87,000 feet, using seven crews.

Trenching.

All trenching is done under supervision of the Delhi Land Settlement. The smaller trenches were all dug by hand last year, but the winter before a small trenching machine owned by J. E. Funk, which excavated several miles of trench, was used. Trenches for pipe 8 inches to 16 inches in diameter are principally dug by hand. The rate of pay for this work for the second season was 18 cents per yard, paying double for picked material and slightly more for graded ditches. One foreman employing as high as seventy men supervised this work. The larger trenches for 18-inch to 30-inch pipe were principally dug by a Parsons excavator. This machine is capable of excavating 800 feet of trench a day to receive 30-inch pipe. It is necessary, however, to clean and drain the trench by hand. There have been 9.89 miles of trench excavated by the Parsons machine.

From four to six Ford trucks were used all last winter in hauling pipe. The rate of pay for this work was \$1.50 an hour. One of the truck drivers efficiently supervised this work.

Backfilling was done principally by team work, using Mormon scrapers and "V" crowdors. A price slightly lower than the tabulation was used as a base. A slightly higher rate was paid for deep cuts. This work was all checked by the man in charge of the trenching.

Roads.

The county of Merced has furnished rock screenings for 7 miles of road, 10 feet wide and 6 inches deep, along El Capitan way, First Avenue South, Hinton avenue and Baumgartner road. The road bed was prepared by the settlement. The Delhi Land Settlement has graveled 8000 feet along Wilson street and First Avenue South, using waste material from the pipe factory.

Drainage.

Although a large quantity of water is saved by the concrete pipe system that would otherwise raise the ground water level, irrigation is causing water to appear on the surface on some of the low spots of the settlement. Professor Walter Wier of the University of California has located eight test wells radiating out from two pumping plants, which are run more or less continuously for irrigation purposes, to observe the effect of pumping on the water table. These wells show that the pumping plants are maintaining the water table within a radius of at least 1000 feet from the pumps. A general survey of the water table throughout the settlement has been made and observations will be made several times during each year. The Turlock Irrigation District has located two wells for pumping purposes on the edge of the settlement to experiment with drainage by pumping. In all probability the district will have a very extensive system of pumping plants for drainage when cheap power is obtainable from Don Pedro dam

SUMMARY OF OPERATIONS, 1920-1922.

Total cost of irrigation system to date	\$388,302 88
Cost per acre of farmers' concrete pipe laterals	43 51
Cost per acre of main lines, including ten pumping plants and concrete structures	34 45
Total miles of pipe installed	95
Miles of main pipe line installed	34
Miles of farmers' pipe laterals	61
Electric pumping plants installed	12
Total acreage piped with farmers' laterals	4,174
Total acreage served by mains	6,000

LETTER OF TRANSMITTAL.

OFFICE OF THE
COMMISSION OF IMMIGRATION AND HOUSING OF CALIFORNIA,
UNDERWOOD BUILDING,

SAN FRANCISCO, January 9, 1923.

To His Excellency, FRIEND W. RICHARDSON, Governor of California.

SIR: In compliance with section 13 of the act creating this Commission, we have the honor to submit herewith the ninth annual report of the Commission.

It has been the practice of the Commission several times in the nine years of its existence to make its annual report not only the account of the progress made during the previous year, but also to reach back and give a brief summary of the Commission's work since its establishment in 1913. In this way the principles underlying the work of the Commission and the avenues of further development can be shown as well as the actual achievements.

The above plan is being followed in this report. While emphasis is laid on the work done in 1922, our aim is to give a bird's-eye view of the entire nine years of the Commission's existence.

Respectfully submitted.

SIMON J. LUBIN,
EDWARD J. HANNA,
PAUL SCHARRENBURG,
J. H. MCBRIDE,
Commissioners.

*To all Members of the Staff, Commission of Immigration and Housing
of California:*

The story of the Immigration and Housing Commission of California is probably unique in the history of the State and of the Nation. It is not too much to say that a very large part of the success which has attended the labors of the Commission is due to the intelligent and the loyal support of those who have been members of our staff. The Commissioners can do little more than outline the work and give it direction; upon you must come the toil, the sacrifice, the spirit of hearty cooperation without which the work must be indeed imperfect; without which it must in the end fail.

We, the Commissioners, desire to take this means of expressing to you our deep appreciation of the fine cooperation you have given us in our common task.

In the first place, you have shown unusual sympathy with the Commission's wards—the hundreds of thousands of foreign-born residents within the State. That sympathy has been of the mind and from the heart, intelligent and human.

Then you have worked in harmony with the Commission's policy of education and persuasion, employing the force of law and authority only as a last resort. In many instances, that has required on your part admirable tact and almost unlimited patience.

You have been keen to respond to every call the Commission has made upon you; and you have given of your time, your thought and your energy far more than the technical conditions of employment demand.

The extraordinary service you have given can be explained only on the ground of love for the work and loyalty to the ideals of the Commission.

Your reward is this:

You are masters in your craft; no other workers in America stand higher as authorities in your fields;

You have done a job and are engaged in work which has won the admiration of social observers throughout the land;

Through your whole-hearted and wise devotion to this task, you have prepared yourselves to do honorably and successfully whatever task may fall to your hands in the future.

For your intelligence, your sympathy, your energy and your loyal devotion, we commend you; and you may be assured of our sincere and practical support in any worthy enterprise in which you may engage in the future.

Commissioners,

EDWARD J. HANNA,
PAUL SCHARRENBURG,
J. H. McBRIDE,
SIMON J. LUBIN.

FOREWORD.

IMMIGRATION AND THE COMMISSION.

The Commission of Immigration and Housing of California has nothing whatever to do with federal immigration policy. It has nothing to do with determining the question of whether immigration into the United States is to be restricted or unrestricted, or of how many immigrants shall be admitted into the United States or into the State of California.

In fact, the Commission, by section 12 of its creating act, is expressly forbidden "to induce or encourage immigration into the State or into the United States."

The interest of the Commission is solely in the immigrants who are already in our midst. Here are neither conjectures nor theories, but hard facts, the immigrants are *here*; and since this is the case, the responsibility for their well-being falls squarely upon the shoulders of the State.

The 1920 census showed that there were within the State approximately 775,000 foreign-born and 910,000 native-born of foreign parentage. These two elements compose just fifty per cent of our total population. Experience has shown that the children of the foreign-born often require special attention. Even if the present restrictions upon immigration be indefinitely retained by the federal government, or even if immigration into the United States is entirely prohibited, the task of caring for the above 775,000, to say nothing of their descendants, is one which will extend into many years.

To help these immigrants become Americans worthy of the name is the aim of the Commission. The following pages will give an outline of the methods used to accomplish this, and an account of the work already done.

Early in the history of the Commission, certain fundamental principles were laid down. After more than nine years' experience, the Commission is prepared to say that it is even more firmly convinced of the soundness of these principles. Therefore it is deemed worth while to reprint them below, as they appeared in the annual report published in January, 1921.

Motive Underlying the Creation of the Commission.

The motive underlying the creation of the Commission was not a paternalistic one. Nor was the Commission an institution created through the feeling of favoritism to the immigrant. Its creation was governed merely by a desire to overcome the handicaps under which the immigrant lives, putting him into a position not superior, but merely equal to that of the native-born, which is only fair and just to the newcomer.

The Working Scheme.

At the time of the creation of the Commission there were many existing agencies in the State ready to help the immigrant. But they needed direction, coordination, and a great deal of energizing and inspiring. With the thought in mind of acting as such a coordinating agency, the Commission was established as an independent, separate organization, linked with no other body in the State.

"Going Out for Business."

The Commission from the beginning, was not content merely to wait until tasks were imposed upon it. A policy of "going out for business" was the point of departure, and it has brought rich results in that almost at once it won its place among the foreign-born of the State.

The Bureau of Complaints.

"Not to speculate concerning the problems met with by our immigrants, but to find out, from the immigrants themselves what those problems are." The Commission, at the start, consulted all the literature available on the subject of immigration, but had to adopt the above motto in order to find a definite starting point. So the Bureau of Complaints was organized, and its work has fallen into three divisions. First, it functions as a clinic, to receive and diagnose any given problem; then it adjusts the particular complaint either directly or through a cooperating agency; and finally it seeks to remedy the difficulty which lies at the root of the complaint by striving for improved legislation, and by educating public opinion.

Why Housing Was Included.

At first there was opposition to combining immigration with housing. Then a woman, a member of the preliminary committee, broke through with her statement, "The home is the basis of civilization in all lands. The house is the concrete aspect of the home. The house, generally overcrowded and in the slums, is the first point of contact between the immigrant and his new environment. And no culture can be fostered in a miserable hovel, but ignorance, vice and crime thrive therein." So the combination was made.

No New Problems.

A careful study of the records of the complaint bureaus brought out the fact that the immigrant has and presents no new problems, but merely intensifies aspects of problems already existing, involving housing, urban and rural, court and police dishonesty, illiteracy and education, recreation and use of leisure time, etc. The first step in dealing with the immigrant, then, was not to devise new laws which should be different from the laws governing the native-born, but to set about removing the handicaps which made him different from that native-born, so that he might take his rightful place beside him.

Removing Handicaps.

The removing of the handicaps which hold back the immigrant serves a double purpose. It gives to that immigrant the chance to work his way toward a contented life here. It also saves our country from the "menace of the immigrant," so feared by many who now oppose immi-

gration. This is shown in the Commission's work in labor camps where chiefly immigrants are employed and which were veritable breeding places of disease before the campaign of improvement was begun.

The Right Mental Attitude.

The first public appeal of the Commission was not to the immigrant, but to the native-born who were asked to assume towards the newcomer the right mental attitude, for the stranger in great part reflects the environment in which he finds himself. Antagonism, suspicion, the spirit of rebellion, on the part of the immigrant, are all, very often, but the normal reactions called forth by the treatment which he receives from his hosts.

The Domestic Policy.

The problem of the domestic policy is the problem of such attitude. Nor should that policy be influenced too greatly by the national immigration policy, for the two can be entirely distinct. That is, the national policy might suddenly become that of prohibition of immigration, but that would make no difference in the domestic policy, for the immigrants already here would have to be handled exactly in the same manner as formerly.

A frequent scene in Italy—reading a letter from America. It does not help the understanding between nations if the hundreds of thousands of letters which go back to Europe every year contain stories of fraud and discouragement.

Regulating Immigration.

The domestic policy is a better means for determining the quality of immigration than any restrictions at the gate. Practically all the immigrants come here in response to letters from friends already here. If the things to be found here are fine, then fine people from abroad will respond to the quest for them. If, on the other hand, the letters home bear tales of fraud and deception, practiced upon the immigrant, then the lawless element from the native land will come in the hope of an easy existence.

"Scatter the Immigrants."

The plan of scattering the immigrants has often been offered as a panacea for all problems of immigration. The study of the question, however, has revealed that distribution from behind does no good. The only acceptable kind of distribution is through making a given place so attractive that a man has to come there. "If you would have him go to the farm, you must make the farm more attractive to him and to his children." This statement coming from an immigrant was not idly made.

The hope of farming under better conditions is often the cause of the European emigrants' coming to America. The above photograph shows modern farm implements of Southern Europe.

National Heritages.

Realizing the valuable contributions that have been made to the world's civilization by all the nations, the Commission has sought to encourage the preservation and development of the best national cultural elements, in art, literature, music, science, the crafts, and in things spiritual. Only by preserving and developing these heritages and combining them with the cultural elements which are distinctly American can the foreign-born be given their rightful place in the tasks of our nation.

Rational Assimilation.

From the first the Commission took its stand against that form of assimilation which hands to the immigrant some things which he is supposed to swallow. So, while emphasizing the things we must give

the alien, it has placed equal emphasis upon the things he can give us. This conception makes a natural place for the immigrant in America. by making him welcome, by giving him a share in the common tasks, and by educating him properly, basing that education upon things already known to him.

Immigrant Education.

It is upon this plan of working from the known to the unknown that the entire scheme of immigrant education should be built. And this conception ties education very closely to daily life. The classes for immigrants which have been organized with the cooperation of the Commission are held at the time and in places most convenient to the people who are to be instructed and the subject matter for the lessons is chosen with a view toward the greatest benefit to them. Also, the Commission has used its influence to establish classes for teachers of immigrant education, believing that, oftentimes, the greatest difficulty connected with the problem lies with the teachers who are not properly trained for the work.

Americanization.

The Commission found that Americanization was not flag raising and "patriotic" howling; that it was not suppression of speech and honest opinion; that it was more than teaching English to foreigners. Americanization, it found, is the encouragement to decent living and making possible the attainment of decent standards. It involves the development of national ideals and standards and the schooling of all residents, foreign-born as well as native-born, in those ideals and standards.

Community Organization.

The best medium for this development of national ideals and standards is, of course, the community. It is in his life as a member of the community that every man, native-born or foreign-born, becomes truly Americanized and makes his best contribution to his nation. Therefore the Commission is definitely interested in the development of all rational schemes of community organization.

Finally—Our Apology.

As a sovereign nation, we have the indubitable right to admit to our shores those whom we desire and to exclude any and all if we choose. But, once admitting a man either for sentimental reasons or because we believe he will prove of economic benefit to us, we have taken on an obligation to treat him decently, to protect him from exploitation and abuse, and to do all those things that tend to remove his peculiar handicaps and that tend to give him an equal opportunity with his neighbor. To give expression to this theory, the Commission of Immigration and Housing was formed.

But, also, the experience of the Commission has shown that a unique opportunity is at hand to build here, consciously and deliberately, a new nation that shall embody the best of all national cultures, ancient and modern, giving to it the advantages which no other nation can enjoy.

A TRIBUTE.

In his second biennial message, delivered to the legislature on January 5, 1915, Governor Johnson said the following concerning the Commission of Immigration and Housing of California:

The systematic work scientifically done by the Commission in our State can only be thoroughly understood by references to its report. In one direction alone it has accomplished results that had it done nothing else would have justified its creation, and justified many times its expenditures. The labor camps of the State of California were in very many instances unfit for human habitation. The Commission of Immigration undertook the systematic inspection of these camps. Hundreds of them it has cleaned up and rendered sanitary. For more than 60,000 human beings the Commission has provided better and more sanitary places in which to live, and for this great work, so well performed, the Commission has the thanks not only of those who were unable to aid themselves and have benefited but of the State at large.

The Commission as well has performed its work for the protection of the immigrant. In various cities of the State it has presented the evils resulting from improper housing, and within the limits of the law has endeavored to correct these evils.

I am deeply indebted to the Commission for the aid it has rendered me on many occasions in social problems that have arisen. Particularly am I indebted for its very careful work concerning the unemployed. This particular Commission has furnished to me a scientific investigating arm in social questions, and the obligation of the State to the Commission and its members I feel can never be repaid.

In the latter part of 1913, a condition which, perhaps, in some degree, had always existed in our State became critical or acute. Those who were out of employment began to organize; and what had existed for many years, but which in its unorganized or unmassed state, had attracted little public attention, became, when massed and organized, a burning problem. At that time, I asked some of the best minds in California to aid the State in finding some solution to what apparently would be an ever recurring difficulty. Publicly I solicited contributions from those who had thought upon the subject, and privately I asked the commissions of the State dealing with social questions to devote themselves collectively and individually as well to the problem, and its remedy. I received very, very many communications and all of these finally were placed in the hands of the Commission of Immigration and Housing, consisting of Simon J. Lubin, Right Reverend Edward J. Hanna, Mrs. Mary Gibson and Paul Scharrenberg, and formally I asked this Commission to investigate each communication and each proposed method of dealing with the matter and to report officially their conclusions. * * * I am in receipt of a report from the Immigration and Housing Commission, which in great detail and at length discusses the subject, and I feel that personally I am deeply indebted to that Commission, and that the State as well owes it a great obligation. * * * I commend to you the report of the Commission of Immigration and Housing and ask your very careful consideration of that report. * * * The Commission is conducting its investigations along the lines suggested in its recommendations and during your session its activities will be duly reported to you.

THE ORGANIZATION OF THE COMMISSION.

The Commission of Immigration and Housing is composed of five Commissioners appointed by the Governor and holding office at his pleasure.

These five Commissioners serve without pay, not receiving even a *per diem*. The present Commissioners were appointed by Governor Johnson at the time the Commission was established or shortly thereafter, and were continued in office by Governor Stephens.

The Commissioners employ an attorney and executive officer who, under their supervision, directs the activities of the Commission. They also employ the rest of the staff needed to carry on the work.

WHY SHOULD WE GIVE THE IMMIGRANT SPECIAL PROTECTION?

Long before the Commission of Immigration and Housing was created in 1913, when the plans for its establishment were first under discussion, there were some who asked, "Why a special Commission for the immigrant? Why single out the alien for special protection, for special help? If help is to be given toward better living, should not the native-born receive it also?" These and similar questions still are asked from time to time.

The immigrant is deemed in need of special protection because of the special and overwhelming handicaps which surround him from the moment he sets foot upon our soil: handicaps which are due, almost wholly, to his ignorance of our language and our customs.

This ignorance not only works to the detriment of the immigrant himself, making him timid, inefficient and despondent, but it also definitely injures the community in which the immigrant finds himself, by weighting it down with an unproductive member.

The special help of the nature given by this Commission is considered necessary, not that the immigrant may have a *better* chance than the native-born in his daily work, but that he may have something like an *equal* chance. For, so long as he does not have that equal chance, he not only loses opportunities for his own advancement but also definitely holds back those about him.

Unprotected, the immigrant falls a ready victim to fraud. He, himself, suffers. But his community suffers also, for every dishonest trick played within its confines necessarily undermines its traditions of law and order.

Unaided, the immigrant usually settles in the least desirable section of town or city, crowding close to his own people, fearful of spending an extra dollar for rent because of the uncertainty of his immediate future. He pays dearly for this congestion, but his city also pays, with all the evils which follow upon wretched housing conditions.

Having come here to work the immigrant is usually over-anxious to secure his first job. Here the operators of labor camps have an opportunity to profit, for the "foreigner," knowing little or nothing of America's living standards, is more likely to accept filthy surroundings than is his American neighbor. And here again, although the immigrant is badly treated, the injury extends to the native-born camp laborer as well and, moreover, insanitary labor camps become breeding holes of disease which endanger the entire State.

Unable to fight his own battles successfully, bitterly disappointed in the hopes which prompted his coming from his own land, the immigrant often grows sullen and discontented. In his own misfortune he begins to see the results of an imaginary class oppression. The next step is anarchy. It may destroy him, but it also works inestimable injury to all who come in contact with him in his community.

Conversely, the correction of the ills which confront the immigrant also carries with it definite benefits to the entire community, since it is an obvious fact that the immigrant introduces no new problems into the social structure of the country but merely gives a peculiar aspect to problems already existing.

For example—the Commission of Immigration and Housing could properly undertake the improvement of labor camps because early surveys disclosed the fact that more than half of the workers in these camps were aliens. But the benefits which came from improving these camps did not stop with the foreign-born.

Similarly, housing was made one of the responsibilities of the Commission because immigrants usually live in badly congested districts. From this point, started a series of investigations which led to the present State Housing Laws which deal in no uncertain terms with the requirements of good housing and are of inestimable benefit to the entire State.

Instances of this sort may be given without number. The two cited above are perhaps sufficient to make this point: that in carrying out its purpose—to aid and protect immigrants in California—the Commission of Immigration and Housing deals with the *causes* which underlie the evil conditions. The removing of these causes makes for lasting and far-reaching benefits to all. But, the approach must be made through the immigrant, for he is always the greatest sufferer from these evil conditions.

Justice demands that all residents of the state receive equality of opportunity. Removal of some of the alien's handicaps makes for that equalization.

A contented, successful and patriotic foreign-born element reduces what would otherwise be a great policing expense.

Immigrants living under fair and favorable conditions are likely to make their best individual and racial contributions to our national development.

Children in church—The immigrant brings as one of his heritages a deep religious sentiment.

THE MAIN DIVISIONS OF THE COMMISSION'S WORK.

Even a superficial glance at the branches into which the work of the Commission has divided itself will show how completely their activities embrace the life of the immigrant.

The reason for this is that when the Commission was first organized, there was no complete hard and fast plan for the several divisions into which its task should fall. These divisions developed only as the Commission became acquainted with the needs and the problems and the difficulties of the immigrant. This knowledge came chiefly from the immigrants themselves, through numerous surveys which preceded the organization of the Commission and searched into every phase of the life of the foreign-born, and through the Bureau of Complaints which the Commission opened as soon as it came into existence. These divisions are as follows:

THE BUREAU OF COMPLAINTS.

To this day the Bureau of Complaints, the first activity of the Commission, constitutes one of the main divisions of its work. It is both a Bureau of Complaints and a Bureau of Applications, for almost as many come to it for advice and information as to bring a complaint of injury done.

This Bureau performs a two-fold task. It is instrumental in giving aid to thousands of immigrants every year, and it is the investigating agent of the Commission, developing and guiding its other activities in the light of the information which it is constantly acquiring.

HOUSING.

Housing was included in the program of the Commission's work at one of the meetings in San Francisco held to draft the bill that finally became the creating act.

Up to that time the projected Commission was thought of merely as a "Commission of Immigration." Then a woman, vitally interested in practical social reform, urged that housing be made an added definite responsibility. The house is the concrete embodiment of the home, she insisted, and there can not be decent citizens without decent homes. Immigrants, upon their arrival, usually are crowded into filthy hovels and therefore are burdened with an additional handicap from the start.

There was no opposition to her contention, and "Housing" was added to the title of the proposed Commission.

LABOR CAMP INSPECTION.

The Commission's early investigations showed that more than half of the men in California labor camps were foreign-born. Also, it was known that a large majority of California's immigrants were laborers.

These figures, combined with the fact that labor camps throughout the state were in a wretched condition, created an irrefutable argument for the directing of the Commission's finest efforts to the cleanup of these camps.

IMMIGRANT EDUCATION.

Thoughtful and systematic education of the foreign-born is, today, a need to which the state is rapidly awaking. Two years ago there was created the position of assistant to the State Superintendent of Public Instruction, in charge of immigrant education. The sole duty of this person is to organize, inspect and energize the schools and classes for immigrants throughout California.

Nine years ago such a scheme would have been considered extravagant and useless by the public at large. Yet, nine years ago, the Commission began to work for just such a solution of the question. To this end it made immigrant education one of its big problems and, in cooperation with far-sighted educators and educational agencies, worked out a series of experiments, the results of which could not but convince all interested individuals and organizations.

A fuller and more comprehensive story of these activities, as well as of several minor departments, makes up the body of this report. Nine years of constant work along these lines have shown that the four major divisions mentioned above cover the chief needs of the immigrant and are the most important factors in his aid and protection.

"Take his picture—he is an American." Seeing an American with a camera, this Italian mother begged him to photograph her son. Circumstances had brought her back to her native land, but she was inordinately proud of the fact that the boy was born in the United States.

BRIEF SUMMARY OF RESULTS OF THE COMMISSION'S WORK.

Below is a brief outline which gives the most important steps in actual accomplishment during the nine years of the Commission's existence.

A. General.

1. In Labor Camp Inspection.

The efforts of the Commission in this field have completely revolutionized the labor camps of the state. In place of the insanitary, dirty, congested, unventilated, fly-filled camp, which was the rule before the Commission began its inspections, comes the camp which is being met with more and more frequently—clean, orderly and comfortable, complying in every particular with the Commission's Advisory Pamphlet on Camp Sanitation. Many of the newer camps are built on plans drawn and furnished by the Commission.

It is safe to say that, at present, California leads all other states in the excellence of her camp standards.

During the nine years ending October 31, 1922, the Commission has made 12,570 camp inspections. Of these, 1761 were made in 1922, up to November 1st.

Through these 12,570 inspections, 465,838 men, women and children located in these camps have been given the opportunity to live cleanly and decently.

2. In the Bureau of Complaints.

During the nine years ending October 31, 1922, the Commission has handled, in its several offices, 21,014 complaints rising out of the difficulties which beset the immigrant. (This does not include the thousands of complaints handled by our Housing and Camp Sanitation Departments.) One thousand four hundred ninety-four of these complaints came during the first ten months of 1922.

It has handled 17,009 applications, exclusive of housing and labor camps; 1427 of these in 1922.

The settling of a complaint by a state organization necessarily brings a feeling of greater trust and confidence in the government on the part of the complaining immigrant. In many instances, the settling of a complaint means that a lawsuit has been avoided.

The Legal Aid Society, now thoroughly established and receiving aid from the Bar Association, was organized in San Francisco upon the initiative of the Commission, in conformity with its creating act.

Pamphlets embodying useful information on points which are likely to confuse the alien have been published in Russian, Italian, Spanish and English. (The State of Connecticut used this pamphlet in preparing a similar publication.)

3. In Housing.

The Housing Institute, a series of conferences which brought together men in the various professions whose work touched upon housing, was called by the Commission in 1916. As a result of this institute, the present state housing laws were framed, and were enacted by the legislature in 1917.

In cooperation with city housing officials, extensive housing surveys and inspections have been made in most of the important communities of California, with the aim in view of correcting bad housing features by making the building conform to the state housing laws. Up to this time this work has been confined chiefly to hotels and tenements.

The Commission has taken part in thousands of inspections.

As the result of these joint efforts on the part of municipal authorities and the Commission, the inside room, that greatest single menace to health, has practically disappeared in three cities—Fresno, Stockton and Salinas; and the number of inside rooms is steadily and rapidly diminishing in other cities. There has been corresponding improvement in other points of housing—bath facilities, toilets, ventilation, light, fire safety, abolition of basement living, general cleanliness, etc., etc.

Wherever possible, the Commission has given definite assistance in city planning and in drafting municipal building codes, as specified by its creating act. An interesting example of a progressive city's experiment in city planning will be found in the chapter entitled "Housing."

4. In Immigrant Education.

In cooperation with the Los Angeles Board of Education, the Commission has conducted a series of educational experiments in its efforts to interest the State in the immigrant woman. These experiments led to the framing and passage of the Home Teacher Act. Further experiments were conducted, culminating in an extensive system of classes in immigrant education throughout the city.

In cooperation with the same board, the Commission was instrumental in launching the first normal training course for teachers interested in immigrant education.

A Manual for Home Teachers was prepared, embodying the lessons for adult women beginners in the study of English.

This was followed by the Primer for Immigrant Women. This booklet broke away completely from the childish primers used in many of the classrooms, and substituted a useful, every-day vocabulary.

In 1920, following its custom of not doing any work which could be done by an agency especially equipped for that work, the Commission suggested to the State Board of Education that it establish a Department of Immigrant Education as a definite part of its own task. The suggestion was instantly adopted. The woman who directed the Commission's work of Immigrant Education was made the new Director of Immigrant Education for the state, and, until the next meeting of the legislature, the Commission cheerfully continued to pay her salary, and cooperated with the Superintendent of Public Instruction in directing her work.

An experiment in better education of the Mexican children has just been launched jointly by the State Board of Education and the Commission. This experiment is treated at greater length in the chapter on Immigrant Education.

B. Legislative.

Believing that the most enduring means for aiding any group of people lies in improved legislation, the Commission has always endeavored to incorporate its findings in legislative measures planned for the prevention of an abuse or the improvements of a bad situation.

The Commission has been instrumental in the preparation and the passage of the following laws:

1. *Labor Camp Sanitation.*

The Labor Camp Sanitation Act of 1913 has been strengthened by amendments at the legislative sessions of 1915, 1919 and 1921.

2. *Housing.*

Tenement House Act of 1915. Amended 1917; Statutes of 1917, chapter 738.

Hotel and Lodging House Act. Enacted in 1917; Statutes of 1917, chapter 736, repealing former acts.

Dwelling House Act. A new law enacted in 1917; Statutes of 1917, chapter 737.

3. *Home Teacher Act.*

Section 1670 (b) was added to the Political Code in 1915, empowering regularly qualified teachers to instruct adults and children at their homes on matters vital to their welfare.

4. *False Land Advertisement.*

Section 654 (b) added to the Penal Code in 1915 making it a misdemeanor to publish or disseminate any untrue or misleading statement concerning real estate located in California or elsewhere.

5. *Dock Zone Law.*

Enacted in 1915, Statutes of 1915, page 548. Provides for establishment of zones or areas on docks where immigrants are landed and prescribes the powers and duties of the Commission of Immigration and Housing with relation thereto.

6. *Subpoenaing Witnesses.*

In 1915, section 10 of the act was amended to empower the Commission to hold hearings and call witnesses to be examined under oath.

7. *Support of Illegitimate Children.*

Section 270 of the Penal Code was amended in 1915 so as to make a parent of an illegitimate child criminally liable for failure to properly support it.

8. *State Land Bureau.*

The Land Settlement Board created in 1917 was supported by the Commission in a recommendation made in 1915.

9. *Labor Exchanges.*

The State Free Employment Bureaus created in 1915, Statutes of 1915, page 486, are in line with the Commission's ideas as expressed at that time.

10. *Regulation of Private Employment Agencies.*

The act of 1913, regulating private employment agencies, was amended in 1915 to allow greater supervision of these agencies and adding requirements beneficial to those seeking employment. The Commission supported these amendments.

11. City Planning.

Sections 15, 16 and 17 were added to the Commission's creating act, in 1917, authorizing it to investigate and encourage city planning. Directs city planning commissions in incorporated cities and towns to file a report of their annual transactions with the Secretary of the Commission of Immigration and Housing. Authorizes the Commission to make an annual report on housing and city planning to the Governor and directs the State Printer to print such report as a public document.

12. Homes for Workingmen.

In this act, Statutes 1921, page 143, the legislature directs the Commission to investigate the practicability of state assistance in the matter of purchase of home lots and erection of dwellings for workingmen. Further directs the Commission to report a bill to the 1923 session of the legislature embodying procedure for putting such a work into effect.

Legislation has been suggested on the following subjects, but none of them have yet been put into statutory form.

1. Public Defenders.

The creation of the office of public defender in the more thickly populated counties, such official to defend criminals unable to employ counsel and to represent poor persons in small civil suits. Since the proposal of this matter, Los Angeles and San Francisco have created this office and the passage of the Small Claims Court Act has proven of vast aid to poor people involved in petty civil suits on contracts.

2. Contracts in Foreign Languages.

(a) A law, requiring that all contracts involving amounts over fifty dollars, to which an alien of less than three years' residence is a party, be written both in the English language and in the language of the alien.

(b) A translation bureau to be established by the Commission of Immigration and Housing which will furnish translations of contracts at cost.

3. Interpreters, Official Court.

An act placing official interpreters in courts of law, under civil service; requiring them to be put under a sufficient bond; and establishing a schedule of fees to be charged by interpreters acting for private persons and not for the state.

4. Titles of Semi-Public Utilities.

Prohibiting the use of such words as "state," "city," "California," etc., in the title of a semi-public utility, when the use of such words might mislead as to the question of ownership and management, and might give the impression that the utility is owned and operated by some department of government.

LABOR CAMP INSPECTION.

The first labor camp sanitation act in California became effective August 10, 1913. Enforcement of this act was placed in the hands of the State Board of Health. However, no special funds were provided for the investigation of existing conditions and to obtain their compliance with the demands of the act.

During the same year, by an act of the legislature, the Commission of Immigration and Housing was created. Under section 7 of this act the Commission was given authority "to inspect all labor camps within the state." Almost as soon as the organization of the Commission had been completed, it was ordered by Governor Johnson to investigate the conditions which brought about the riot which occurred on a hop ranch near Wheatland on August 3, 1913, just one week before the Camp Sanitation Act became effective. The Commission was the natural agency to be called in, as most of the laborers on the ranch in question were foreign-born.

Housing and sanitary conditions on that ranch were unspeakably bad. Moreover, it was found that these conditions were by no means exceptional, and the Commission, with the consent of the Board of Health, assumed the responsibility for inspection and correction of camp housing and sanitation.

This responsibility was officially given to the Commission, through a completely revised law, by the legislature of 1915, for, by this time, it had become clear that more than half of the laborers in the camps were immigrants and, furthermore, the Commission's Camp Sanitation Department was already organized and functioning in a thoroughly efficient manner.

The history of this department, covering a period of less than nine years, has been a history of continuous progress and constructive effort and of accomplishment even beyond the Commission's own early plans and hopes. Yet the change in the actual conditions of the camps, as well as in the standards of housing, has been brought about so steadily, adjustments to the new standards have been made so gradually, that the improvements have been taken almost as a matter of course. In fact, both employers and employees have forgotten, in large part, that anything less than the present standards ever existed.

This development of camp sanitation and housing under the direction of the Commission has been in four ways; first in actual changes in the law itself—the constant raising of the standards; second, in the improvement of the administration of the law—a working out of better methods of covering the state; third, in a definite and gratifying growth of cooperation secured from employers; and, fourth and most important of all, in the improved condition of the camps themselves.

It is from these four angles that the history of the Commission's Department of Labor Camp Inspection will be briefly sketched.

I. PROGRESS IN LEGISLATION.

The act of 1913, the first camp sanitation law, was soon found to be inadequate. Its provisions were indefinite. The law simply set forth in general terms that bunk houses, tents and other sleeping quarters

and the grounds about camps should be kept clean; that sufficient air space be provided in sleeping quarters; that beds or bunks be made of iron, canvas or other sanitary material and be so constructed as to afford reasonable comfort to the occupants.

The law did not state that the housing quarters for employees must be furnished, and there were no provisions for sanitary arrangements. Yet the lack of toilet and bathing facilities and the primitive methods used in the disposal of kitchen waste, garbage and other refuse were responsible, to a large degree, for making our labor camps unfit for human habitation and a menace to public health.

Therefore the Commission, in cooperation with the State Board of Health, drew up a set of rules to serve as a minimum standard for living conditions; and the Camp Department endeavored to secure compliance with these requirements as well as the specific features of the law itself. This practice of obtaining improvements beyond and above the mere minimum set by law has been the regular practice of the Commission, and thus well-tried practical experiment and successful accomplishment have always preceded changes in the law. The amendments from time to time have simply legalized the practices already in effect.

These amendments gradually changed the original act almost beyond recognition and the Commission's Pamphlet on Camp Sanitation and Housing has kept pace with these revisions. The present law, while by no means ideal, ranks high in provisions for reasonable comfort in living quarters and in maintenance of sanitary conditions about camps. So far have standards advanced that a "good" camp of 1914 would be only "fair" now. The principal features of this present law which show advancement over the original act may be briefly summed up in the following points:

1. Bunk houses, tents or other suitable sleeping places must be provided and must be in good structural condition so as to afford shelter against the elements and exclude dampness.

This assures the worker of good housing quarters and protects him from the "ground for a floor and sky for a roof" type of sleeping place. It does away with ragged tents, with brush shelters and with barns and stables formerly used.

2. Suitable bunks or beds shall be provided for employees. A clear space of twenty inches measured from floor to ceiling must be allowed between beds or bunks. A mattress or equally comfortable bedding must be supplied upon request, a reasonable charge for which may be made by the employer. Ticks or containers must be supplied if straw or other substitute for mattresses is used.

In this manner the Commission has done away with the common practice in the past whereby the only bed supplied was space on the floor or ground with a bit of straw thrown in. Platform bunks have likewise been eliminated as well as wooden bunks containing loose straw, which become quickly infested with vermin. The present law makes possible comfort and cleanliness in beds.

Car-type dining quarters of the modern lumber camp, built in cooperation with the Commission. Specially designed for the pine districts where camps are moved from place to place.

3. Dining rooms, kitchens or other structures where food is cooked, prepared or served must be kept clean and sanitary; openings must be screened. Cooking utensils, dishes, knives, forks, spoons and other implements for eating must be kept clean, unbroken and sanitary.

Proper protection for food is most essential whether in its preparation and cooking or in serving. Contamination of food in the old time filthy and unscreened kitchens was unavoidable. This change in the law not only has been a measure for protection against disease but has increased the efficiency of the kitchen service and has added comfort to the employees during their meal hours.

The Commission has brought about the building of scores of dining rooms of this type to replace the old tumbledown, unscreened quarters.

4. Every camp must provide convenient and suitable bathing and toilet facilities. Their maintenance in a clean and sanitary state is definitely prescribed.

Perhaps there has been no greater cause for complaint than the utter disregard on the part of employers for these most essential of all sanitary conveniences. Bathing facilities were not only entirely lacking in the labor camps of the state when the Commission began its work, but their installation was deemed an unheard-of and entirely unreasonable proposal. Men working in camps never had bathed, therefore they never would bathe; so why furnish baths? But the properly equipped bathhouse is today as much a part of a camp layout as the kitchen itself. *And the baths are used.*

One of the hardest fights which the Commission has is the installation of bathing facilities. This photograph shows that bath houses need not be pretentious. Heater in rear.

The former crudely built burlap or frame structure made to serve for toilet purposes has been one of the most aggravated factors with which the Commission has had to contend. Frequently even this shelter was missing and the open spaces behind buildings, river beds, ditches, open fields, were the only facilities afforded. The very specific manner in which the law states that privies shall be built and maintained insures protection against these dangers to public health and establishes a standard for decency and privacy.

5. Garbage, kitchen waste and refuse must be placed in covered receptacles, must be emptied daily or oftener and contents burned, buried or otherwise disposed of. Drainage from kitchen sinks must be carried through covered drains to covered cesspools or septic tanks or be disposed of by some other satisfactory method.

The old method of throwing garbage and refuse out of the kitchen door or dropping it through convenient holes in the floor to the ground beneath for hogs to forage was responsible in the past for the unsightly and insanitary conditions of so many camps. Covered garbage con-

tainers and proper disposal of their contents as well as sanitary treatment of drainage are essential to healthful camps.

6. At every camp a responsible person must be appointed to assist in keeping camps clean.

Camps can not take care of themselves. The best built camps, the most modern equipment, will soon deteriorate if care is not given to their upkeep. Laborers can not be expected to look after this phase of the work, and the daily routine of cleaning must be delegated to some definite person.

The above requirements of the present Camp Sanitation Act make possible decent and healthful living conditions. The standards thus

The living garbage cans of the old-style lumber camp. Refuse was thrown out of the kitchen door and the hogs were supposed to take care of it from that point on.

established by law in California have considerably lessened the just grievances of workers and have guarded against one of the most persistent causes of labor unrest and labor trouble, namely, bad housing and insanitary living accommodations.

Employers themselves have acknowledged the advantages gained. The following excerpt from one of the innumerable letters received by the Commission shows justification for these standards set by law:

We are heartily in accord with the campaign which has been carried on by the State Commission of Immigration and Housing for the improvement of camp sanitation. The results are not measurable in dollars and cents alone. Proper conditions about the woods camps not only make for better men, but better service, and, in our judgment, the work which has been carried on by your Commission has been a distinct help not only to the employee but to the employer.

II. PROGRESS IN ADMINISTRATION OF THE LAW.

The successful carrying out of the spirit as well as the letter of the law has necessitated not only insistent enforcement but wise administration and a thorough understanding of the problems to be dealt with.

Up to August, 1915, when authority for enforcement was delegated to the Commission of Immigration and Housing, the camp department was able to use only persuasion to secure results. But even under this handicap of lack of power, encouraging progress was made. So that by the time authority for enforcement was actually granted to the Commission, many improvements had already been started and sufficient co-operation obtained to make that authority necessary only as the last resort.

Inspection was made difficult at first because of a lack of record either of the location or of the number of the camps in the State. The inspectors had to simply search them out, using every available means

A 12 x 14 tent occupied by eleven men. A common condition in uninspected labor camps.

of inquiry to aid them. Year by year, however, the Commission has added to its camp list until today there is on file practically a complete record of permanent camps, and this is a great aid to inspection.

The Commission has steadily gained more accurate knowledge of the seasons in which permanent and temporary camps are open, and inspection became adjusted to the time when camps are in operation. This was a big asset in a State as large and as varied in its industries as California.

Location and inspection of camps of a temporary nature is still one of the chief difficulties of the camp department. Maintenance of sanitary conditions in temporary camps has depended to a large degree on

the alertness of the camp department in ferreting out their location in the beginning rather than the end of the season, for to reach a camp only to find that it is to close in a few days is wasted effort. It is futile to insist upon compliance with the law when the camp itself is to be demolished in a few days.

While constant inspection and reinspection are absolutely imperative, other methods of reaching camp operators have aided in the effective administration of the act. The widespread distribution of the "Advisory Pamphlet on Camp Sanitation and Housing" has made it possible for camp operators to understand more clearly what was expected by the Commission. An elaborate exhibit of good camp housing was prepared and brought before the public. The Commission's inspectors

Wood floors, half walls and the presence of a stove make these tents extremely comfortable in any weather. A common type of camp today.

often hold meetings with employers, singly or in groups, to discuss the requirements of the act and to advise on the specific needs for the coming season. This has brought about mutual understanding and interest in providing the best possible accommodations.

While the Commission has always preferred the policy of persuasion to that of compulsion, it has become necessary at times to resort to the latter method. This policy has been sanctioned by the act itself which was amended in 1921 so as to give the Commission the right to enter upon property for inspection purposes. The law further gives the Commission's officers or agents the authority of sheriffs and other peace officers when it becomes necessary to secure enforcement of the act.

III. PROGRESS IN COOPERATION.

Successful enforcement of a law depends largely upon the extent of intelligent interest displayed by all parties concerned. In no phase of its work has the camp sanitation department made more marked progress than in the cooperation secured from employers and employees.

The Commission has always believed that the question of improving living conditions in labor camps was a question of friendly and interested cooperation with camp operators as well as the gradual education of the State in standards of camp housing and camp sanitation.

The nine years of work in this field have completely justified this belief. With labor camps improved almost beyond belief, with 12,570 camp inspections to its credit, the Commission has caused just 52 arrests for failure to cooperate in improving the camp—a shade over four-tenths of one per cent of the number of inspections. It is interesting to note here that, although these cases are tried in local courts, only two out of the 52 offenders were found “not guilty.”

It is the spirit in which employers have fallen in with the Commission's plans that is largely responsible for the numerous model camps which exist today—camps far in advance of the law's requirement—which would have seemed extravagant dreams in 1914.

It is not entirely surprising that camp operators had given but little attention to decent quarters for their workers prior to 1913. There were no standards for the housing of laborers, no one really knew what comforts were due them; and men came and went, carrying their blankets on their backs, taking their chances on finding something that might be termed “housing shelter” and a place in which they could be fed. For the rest, anything would do, even if it were nothing. Complaints from the workers could be of little avail for there was no organization to which appeal could be made, no law to protect them.

The first efforts of the commission, therefore, had to be educational in character. Old prejudices, old habits of thought had to be broken down before a new practice could be initiated. Employers had to be persuaded not only that the improvements sought were necessary to the health and general well-being of the workers, but that good camp conditions meant a more contented, more stable and more efficient labor supply.

While recalcitrant employers were often encountered, while many prejudiced operators considered the new demands unreasonable or visionary, it is to the credit of the large number of them that they have readily adapted themselves to the new order. They have complied with the requests of the camp inspectors, have followed the instructions set forth in the advisory pamphlets issued by the Commission, and have continually sought advice regarding better ways of maintaining and improving their camps. The following statement made to the Director of Camp Sanitation by the general manager of one of the largest lumber concerns operating in California best illustrates the attitude of employers toward the new standards:

The education I received in the matter of good labor camps was invaluable to me and to my company. When my company first came to California, to operate labor camps in the lumber district, I was very antagonistic to all the so-called “California Social Laws,” but I have learned that this legislation is for the benefit of the employer as well as the employee, and I'm for it.

Ignorance and neglect on the part of the laborers employed also had to be dealt with. The abuse of model equipment installed meant discouragement for the operator and made it more difficult for the Commission to continue its insistence on these improvements. Placards of "Sanitary Rules" printed in different languages have been posted by the Commission in all labor camps, so that foreign as well as native-born workers might know that the State is definitely interested in their welfare and that responsibility for decent standards rests with them as well as with their employer and the Commission.

And the employes have been quick to appreciate well kept quarters. Now that they are familiar with the work of the Commission's camp department, they constantly report insanitary conditions through the Commission's bureau of complaints, and it is upon these reports that the Commission depends in locating certain bad camps which still continue to exist, or those of a temporary nature which it had been impossible to locate.

IV. FROM OLD CAMPS TO NEW.

Whatever else may have been accomplished in the field of camp inspection, the final test of the work lies, of course, in the improvement of the camps themselves. For, no matter how excellent the progress in legislation, no matter how wise the administration of the law or how thorough the cooperation between the Commission and the employers of labor, if the camps themselves have not gone ahead, then all else counts for less than nothing.

Literally thrown into the work of camp inspection by the 1913 Wheatland hop-field riot mentioned above, the Commission had to do some very rapid "organizing" in order to meet the new task.

And this new task was a stupendous one. The labor camps of the state were in wretched shape and there was no time to lose. Yet for the first year and a half the Commission of Immigration and Housing had only delegated authority in the work, and, even when the legislature of 1915 officially confirmed this authority, appropriation for the work was very small, \$5,000 a year for two years, and the whole of the State of California to cover.

That the Commission was able to carry on the work efficiently under these conditions and to obtain the results which it obtained is due, in part, to the splendid cooperation of other agencies which could be of help, particularly the State Board of Health, the Highway Commission, the Industrial Accident Commission and the Industrial Welfare Commission whose agents were able to aid in locating camps and in various other ways while attending to their own specific duties.

In California the work of labor camp inspection is complicated by the fact that there are many different *kinds* of camps. And while, fundamentally, standards are the same for all camps, the problem varies greatly with each industry around which a particular camp has grown up. An inspector who had learned how to bring a permanent lumber camp up to standard would face an entirely new undertaking when he came into a seasonal camp in the apricot district.

These differences in the types of camps have been taken into consideration when presenting a brief outline of the work of the camp department.

The construction camp as it used to be before the Commission's inspectors showed the better way. Torn tents, providing very little protection.

1. Construction Camps.

Certain construction camps were the first to be inspected by the Commission, and it is certain that a description of one of these would be indignantly repudiated by any 1922 operator. He would insist that no camp run by his company would have been in such condition even nine years ago. And yet, practically without exception, all construction camps were bad, consisting of 12 by 14 floorless tents holding as many men as could be crowded into their double deck wooden bunks, and pitched "anywhere" at crazy angles to each other; unscreened, ragged dining tents with garbage dumped around them; no drainage or toilets; bathing facilities unknown; dirt, disorder and rubbish everywhere.

A construction camp of today showing model tents in military rows, the grounds immaculately kept, meeting, in every respect, the requirements of the Commission.

Another view of the old construction camp. Overcrowded sleeping quarters under a leaky roof. Construction camps were the first to be improved by the Commission.

A true bird's-eye view of a modern construction camp, photographed from the air. Showing the result of the state's policy of sanitation.

Nine years have passed and we have the 1922 construction camps with floored sleeping tents set in military rows, each containing steel beds with comfortable mattresses, each equipped with a stove; screened dining quarters; covered garbage containers; ample toilet and bathing facilities; and special attendants to keep the camp clean and in good repair.

And the sentiment of camp operators toward the new order is often expressed in some such terms as appear in this paragraph in a letter from a firm which maintains construction camps:

We are pleased to state that we have found from an economic standpoint that we have been fully repaid for any money we have spent in the way of increasing sanitation and equipment of our camps for the reason that more efficient work and better results have been obtained from our crews on account of being satisfied with the treatment given them, also we have found during times of labor shortage, that we were able to hire more men than others who had not provided suitable accommodations for their laborers.

2. Lumber Camps.

When the Commission's inspectors went, in 1914, into the lumber district they were told of the "model camp of Humboldt County" which, so gossip went, was run by a "nut" who had built a bath for his men. This, to the best knowledge of the Commission, was the only bath in the lumber camps of that period.

In 1922 there was not a lumber camp of any importance in the entire state which did not have adequate bathing facilities. Other improvements kept pace with this. Cesspools and septic tanks had taken the place of drainage into the creek or over the bank; flush type toilets had been installed in many camps in place of insanitary privies or the lack of all facilities; smaller sleeping cabins are taking the place of the crowded bunkhouses of the redwood districts and the shabby, ragged tents of the pine woods.

In sleeping quarters the greatest improvement has come in the passing of the itinerant "blanket stiff." Many camps no longer permit men to carry their own blankets into camp. Instead, clean bedding, including sheets, is provided by the operator and usually a small monthly charge is made for this.

The readiness with which the work of improvement gathers momentum until many things are provided which are not prescribed by law, is well illustrated in the enthusiastic letter from a lumber company, part of which is here given. In it is described what the Commission calls a "model camp"—one which has gone beyond the legal requirements.

All camps have new cabins with the exception of cabins in one camp which were repaired, they are painted white inside and out, wooden boxes put in and a clothes locker for each man so that he may lock up any personal effects. A cabin service with our new beds, which consist of mattresses, three army blankets, sheets, pillows and a canvas covering long enough to fold under the mattress, was started and a camp man makes up the beds, sweeps out the cabins, fills the wood boxes with cut up fine wood, replenishes fuel for the lamps in the camps where electricity is not yet installed and does his share of sanitary work around the camp.

Flush toilets are scrubbed out each day with lye and bath houses are placed amongst the cabins with hot and cold running water, which also receive their share of lye.

All kitchen drains run into a cesspool which resembles a septic tank and the overflow is carried off by filtering through a gravel pit.

Tin cans and rubbish from the kitchen and camp are carried away from the camp to a hole where they are burned, so I'm afraid that a sanitary notice from you will be a small one if any at all.

The cook houses have all been remodeled and painted white, it certainly makes quite a difference in the looks.

Our cooks are absolutely the best that we can obtain and the results have well repaid the selection and differences in salaries. To further improve our service we keep a relief cook who not only gives the regular cooks a chance to rest up and break away but also furnishes the camp with a change in cooking.

We started one thing and I'm sure I don't know where it will stop. A school and family houses down on the flat in the center of the three camps. We faced a problem—that of getting the few children to school. So we decided to build our own school building and hire the teacher. With that news out people began to come into camp and were willing to live in any kind of a shack as this was something new, a school and a free home in the woods.

A lumber camp now under construction showing the small cabin type which the Commission evolved after thorough investigation. Each cabin houses three men.

We put up the school building and combined a social hall along with it. It is arranged with a portable partition in the center of the building so that when dances and shows are held there is room for all. Then we decided on a standard family house of four rooms with running water, placed far enough apart so that there is privacy and plenty of room for gardens. The demand was great and this is the system we now use; a family man comes up to work in the woods, he naturally asks for a house and his name is taken. If he makes good on his job and is of the type that would be a benefit to the community, his request is granted after a fair trial to all concerned.

From what you saw on your last trip here, I hope that you are satisfied with the information that I have given you in this letter and that you will put it over big for the sake of newer ideas in the future.

When the Commission's inspectors went into Humboldt County nine years ago they were looked upon as crazy men and their suggestions were openly called extravagant dreams. Yet the above letter describes but one of the scores of these dreams which have come true even beyond the expectations of these same inspectors.

3. Mining—Cement—Oil.

Mining camps of the earlier days were neither comfortable nor well constructed in spite of the fact that they were permanent in character and just the type of camp to which men with families would be attracted by proper housing features.

Today, although there are few mines in operation, the rating of the mining camps is "good," and the manager of several large mines writes, in part—

Our efforts to maintain our mining camps in sanitary condition have resulted in our suffering less from the present labor shortage and inefficiency of labor than has been the case with other companies operating in this vicinity where the conditions, though fairly good, have not been quite as good as in our camps.

A better view of the three-men cabin. These cabins have taken the place, in many camps, of the big, crowded bunkhouses against which the Commission has been fighting since 1913.

This has been true of all our mines, but the effect is most marked in our main mine, where in addition to good sanitary conditions, we have installed what we call a "Social Hall" which provides a pleasant reading room, billiard hall, dance hall and moving picture show for our employees.

In several of the mining camps, men have the choice of renting cabins with bedding or of taking their own blankets into a well ventilated bunkhouse. One mining camp is now planning to put in a complete sewer system.

Upon advice of the Commission, living quarters in cement quarries in the state have been practically rebuilt and here, also, a large plant has put in a sewer system.

Oil camps of today are, on the whole, rated highest of all on the records of the Commission. Well built houses, neat, clean camp grounds, modern plumbing conveniences, characterize these camps, whose owners recognize the value of all this to themselves, of which one oil company writes:

It can be said that the improved camp conditions not only attract better workmen, but serve to raise the standard of the workman.

Progress over the oil camps of 1914 has been rapid and very thorough, and here the Commission has had the most wholehearted cooperation from the start. It still faces, however, the problem of inducing oil camp operators to provide bedding for their employes.

4. Railroad Camps.

In no branch of camp inspection have better results been achieved than in the construction and maintenance of railroad section camps.

Each railroad maintains section crews stationed ten miles apart and their "homes" in former years often consisted of shacks made of rotten boards and tin cans, or, where portable camps had to be maintained discarded cars were used filled with double deck wooden bunks.

Working with the Commission, the railroads have evolved types of section houses best suited to the needs of their men and the last years have witnessed the building of many of these. The Santa Fe Railroad,

The railroad section houses used to be a menace to health and decency. This shows an excellent type of houses recently developed.

for example, has just completed 128 new and model section houses; the Southern Pacific, 252; the Western Pacific, 5; and the Northwestern Pacific, 2.

The work of improvement here is tied up with tremendous outlay of money and the Commission, realizing this, has been content to go only "so fast and no faster" so long as a steady improvement is maintained. Double deck bunks are going out of use and are being supplanted by steel beds, new cars are being used in place of the dilapidated ones, and the Commission has been thoroughly satisfied with the progress made. As for the attitude of the railroads toward the work of improvement, it leaves nothing to be desired, and the following is a typical view:

In labor camps care is exercised in maintaining proper sanitation and living accommodations. Where extra gangs are employed and educational instruction is not otherwise obtainable, the company maintains portable schools where without cost the children of employes are afforded opportunity to obtain an education in the elementary branches of English.

This policy seems not only dictated by humanity but it has proven of economic value.

5. Agricultural Camps.

That ranch managers recognize the value of good camps for their help is seen from letters such as the following:

Since the following out of the plan of camp sanitation as outlined by your inspector, we have been able to keep on our ranch a better class of men than we formerly employed. This is especially true during harvest time as our camp attracts a better class of men than those camps which are of a temporary nature.

During the last year we have had no sickness on the ranch which is doubtless one of the benefits derived from better sanitation.

Ranch camps include several distinct types, depending upon the crop grown, and only the principal ones are mentioned here.

Ranch camps have presented one of the gravest problems. This is the type of sleeping place often found in uninspected camps.

Yet the ranch camp can be both clean and comfortable. This is one of the many which the Commission's standards have helped to create.

(a) Citrus.

The model camps for laborers in many of the citrus districts of southern California had their beginning in the El Monte experiment where, at the suggestion of Dr. Pomeroy, county health officer, Mexican laborers who lived on the banks of a "wash" in shabby shacks were moved to a better location where a model little settlement had been built. The Commission was called upon to help with the planning of construction and sanitation, and so excellent did it find the plan that it used it as an example to interest the citrus communities in constructing similar "towns" for workers—mostly Mexicans—who were living in shacks made of brush, weeds and tin cans reinforced by an occasional piece of discarded lumber.

A citrus camp in Southern California before the Commission had had an opportunity to show the better way. There are still camps of this type which must be eradicated.

A citrus camp for Mexican laborers in a city of Southern California. Another example of commendable City Planning.

The joy which these workers take in their new homes is a revelation to the skeptics who have held that "anything is good enough for Mexicans." Model citrus camps are now in existence in many points in Ventura, Los Angeles, San Bernardino, Riverside, Orange and San Diego counties.

(b) Beets.

A big problem was encountered here. Mexican laborers are brought in great numbers to work in the beet fields and sugar factories and, until recently, these have been housed indiscriminately, with no thought of order and little thought of sanitation.

After consultation and planning with the Commission the principal beet sugar companies agreed to erect a number of adobe houses and proper tents for temporary camps.

Here, too, the problem is that of a great outlay of money, for the working force is very large. Nevertheless, a company in the Salinas Valley has recently put up complete frame houses for its workers in every one of its forty-five camps and has provided up-to-date bathing and toilet facilities. But much still remains to be done, and the Commission is now working on the next step to be taken here.

The cotton camps of Imperial Valley as they still are in some localities, showing the need for unceasing work on the part of the inspectors.

(c) Cotton.

Cotton is grown in the Imperial Valley and here the job of camp improvements becomes inextricably mixed with the vicious practice of tenant farming. Men who lease a ranch for a year or two see no reason for spending money on housing accommodations for their help, while the owners, residing hundreds of miles away, can feel no responsibility in the matter. While, when the land owner himself conducts his camp, the work of the Commission is complicated by the attitude described in this letter:

Many of the Imperial Valley farmers came into the valley without a cent, developed their own land, lived on the desert in ramada houses or tents and without any of the facilities and comforts which are more commonly now enjoyed. It is no wonder that these pioneers have found it hard to see why ordinary cotton pickers should be furnished with accommodations better than they themselves enjoyed for a long time.

Yet it is in places like the Imperial Valley that housing plays the greatest part in the attitude of the workers. The same letter goes on to say:

It has been our policy to furnish sanitary living conditions in our labor camps. During the past summer there was a labor shortage in the Imperial Valley. While many other farmers were unable to promptly handle their crops, we scarcely felt the shortage at all.

We have found that every cent expended so far has been amply justified. We propose to continue along the same lines and would be glad of your suggestions and cooperation.

Knowing the value of persistent education, the Commission will continue hammering at the cotton camps, even though results come much more slowly than in other industries.

A different type of cotton camp in Imperial Valley, showing the type of structure best adapted to the heat of the summers.

(d) Apricots, Cherries, Peaches, Grapes.

Here the task of the Commission was, often, not to improve camps but to create them. And therefore the maximum of tact and judgment had to be used in convincing ranch operators that compliance with the law would also mean real benefits to themselves.

The seasons of the various fruits are so short that ranchers thought it useless to provide any sort of comforts or even shelter. In their eyes "it didn't pay." To overcome this difficulty the Commission has devised the *Community Camp* which gives several ranchers the opportunity to cooperate in housing their summer crews, and which is made up of tent houses so constructed that they can be easily taken apart and stowed away for the winter. Taking the place of the old method of throwing down old sweat boxes under the trees and expecting the workers to be satisfied—this community camp has marked a big step in good housing.

(e) Hops.

In the light of the oft-mentioned Wheatland hop fields riot which gave the state an inkling of how bad labor camps can be, the conditions in the 1922 hop camps have been a source of particular pleasure to the Commission.

A model Community Camp, planned by the Commission to take care of the needs of several growers.

The hop fields of 1913 offered shelter such as this in the heat and dust of summer. Many complaints were made, in those days, of the spirit of discontent among the hop pickers.

The hop ranch referred to above was, in 1913, a combination of torn tents, sleeping accommodations on the ground under the open sky, and absolute lack of means for garbage disposal, toilets wholly inadequate in number and in unspeakably filthy condition, uncovered, muddy, polluted wells and no facilities for bathing although hops are gathered in the heat of summer. Nor was this ranch the exception.

Today hop ranches offer all the required comforts, and operators of camps have been ready to cooperate at every point. *It is worthy of note that no tendencies toward any "riots" now appear among the men employed.*

(f) Rice.

The Commission's wholehearted attitude of give-and-take which has made its task of labor camp inspection so rich in firmly grounded results was shown in the case of the rice camps of 1920-1922.

Two years before this, the rice men were rich. And the Commission held them very strictly to the observance of the law. Some fine results were obtained and a number of splendid new camps came into being.

Before the bad years of 1920-1922 struck the rice growers, the Commission was able to supervise the erection of many camps such as this in the rice district.

But 1920 and 1921 were failures and many ranchers were in desperate straits. The Commission decided that it could not hold operators to the building of new camps or even to the structural improvements of camps already existing. The letter of the law had to give way to the spirit, and operators were considered as doing their duty if they kept their camps clean. As soon as conditions improve, the rice fields will be given special attention. Here, too, the vicious tenant farmer problem complicates the work.

(g) The Delta District.

The Delta District is the sore spot of the state in the matter of labor camps. Here the laboring population is 95 to 99 per cent foreign-born and American standards of living have penetrated but little or not at all. The atmosphere of the section is entirely foreign and the Commission's camp inspectors are forced to readjust their methods of approach many times each day, as they talk with Hindu, Chinese, Japanese, Italian, Portuguese, and American operators, each with his own particular standard of living and sanitation.

A semi-permanent settlement of migratory laborers who come home to these dwellings from the day's work. Conditions such as these are rapidly disappearing, but there is still a big field for inspection.

Where Camp Sanitation overlaps City Planning. A cannery camp showing modern cottages for housing the workers. One of the results of the state's labor camp policy.

To carry out the provisions of the law, two camp inspectors have been kept in this district just before and during asparagus cutting time. Here lack of funds is not a usual factor, for the land is the richest imaginable. As the result of concentrated effort, several hundred camps have been rebuilt and new camps were constructed by canneries on the islands in the district. But the problem here will always call for the strictest vigilance and reinspections will have to be made continually if the section is not to become a menace to the state.

This, in brief, is the story of actual camp improvements in California. In all, there have been 12,570 inspections by the Commission, 1446 of which were reinspections. The population of the inspected

That workers will produce more and better work when living under conditions such as these has always been the theory of the Commission. A model camp laid out with the Commission's help.

camps was 465,838 men, women and children—almost half a million persons whose living conditions were improved because of the far-sighted policy of the state.

As early as 1915, when the work of the Commission was still in its very beginning, Senator Johnson, then Governor of California, said in his message to the legislature, speaking of the Commission:

In one direction alone it has accomplished results that, had it done nothing else, would have justified its creation, and justified many times the expenditures. The labor camps of the State of California were in many instances unfit for human habitation. The Commission of Immigration and Housing undertook a systematic inspection of these camps. Hundreds of them it has cleaned up and rendered sanitary. For more than 60,000 human beings the Commission has provided better and more sanitary places in which to live, and for this great work; so well performed, the Commission has the thanks not only of those who were unable to help themselves and were benefited, but of the State at large.

Since then the results achieved have been multiplied many times over, and the 60,000 of which Senator Johnson speaks has grown to nearly 500,000.

With more and more camps being located, with new territory constantly opening up in the development of California, with new interest being shown in building of all sorts, the Commission's camp department has had, in 1922, even more work than in earlier years. But much of the disheartening, uphill work of making clear the conceptions underlying the task has already been done and the department is now free to devote practically all of its time to the definite problems of still further improving its standards, of building new camps, and improving and maintaining camps already existing.

Cheerful, airy and light—built in accordance with the suggestions of the advisory Pamphlet on Camp Sanitation and Housing.

The Commission planned the kitchen for the big camp with careful thought for the comfort and welfare of all concerned, the camp laborers as well as the cooks.

LABOR CAMP STATISTICS.

Showing Number and Population of Camps Inspected and Reinspected from April, 1914, to November 1, 1922.

BUREAU OF COMPLAINTS.

The work of the Bureau of Complaints has been, from the start, a most vital part of the work of the Commission of Immigration and Housing. The purpose of the Commission, as expressed in its Creating Act, was clear—to protect and aid immigrants in California. But there was needed a broad and rational interpretation of this purpose and a sane and practical program for carrying it out, so that the newly created Commission might prove a really live institution.

“From the Immigrants Themselves.”

The Commission was going out into a virgin field and there were no precedents to guide its work. The mass of statistical data, the lengthy reports, the many books on immigration into the United States, shed little light on the question of how to help an immigrant in California to become a good American.

So the Commission laid aside books and reports and opened its Bureau of Complaints.

“Not to theorize concerning the problems and difficulties met with by newly arrived immigrants, but to find out, from the immigrants themselves, what these facts and problems are.” The Commission cheerfully pleads guilty to having used this phrase again and again and again, in its reports, in its letters, in talks made by members, by its staff—giving it always as the starting point for its work with and for the immigrants. This “finding out” the Commission hoped would come through the Bureau of Complaints to which perplexed or wronged immigrants would come for advice and help. And, while this advice and help were given to them, the Commission would learn “from the immigrants themselves,” the nature of the difficulties and the handicaps with which they were obliged to cope. Today, after nine years of experience, the Commission feels more certain than ever of the soundness of this initial theory.

Having opened this bureau, the Commission was not content to await the normal slow-growing response. Instead, it went out definitely in search of trouble. Huge posters printed in twelve languages, one of which is reproduced here, announced the opening of the Commission’s office and invited all who needed help or information to come in person or to write. The foreign press of the state eagerly undertook to do its part in spreading the news; thousands of cards, in English and in the prevailing foreign languages, were printed and distributed.

The response was very great from the start; countless grievances had been borne in silence or in futile complaining for long periods, and the opportunity to secure real and lasting aid from *their own* Commission was eagerly grasped.

The Difficulties of Assimilation.

Although the surveys and other research work preliminary to the creation of the Commission indicated that the assimilation of the average foreign-born, who is left to his own devices, is an extremely slow, painful and often misdirected process, it remained for the Bureau of Complaints to discover just how unsatisfactory is the haphazard plan of letting the foreign-born shift for himself.

For years the immigrant might go about his work in one of our cities, might walk its streets, ride in its street cars, buy in its shops and mingle everywhere with men and women of other countries of the Old World and with native-born Americans. Theoretically, all these years, he is becoming Americanized. Theoretically, he is learning the language of America which he hears daily. Theoretically, he is adopting American business ways, is finding new and better opportunities for work, is learning something about wise investments. At the end of several years, following this theoretical progress, he has become thoroughly "fused" and "assimilated," has found his work and, thoroughly contented, has become a definite asset to his community.

It is true that many immigrants, through a fortunate combination of circumstance and native ability, follow this happy program. But the fate of the greater number is quite different.

These latter, in the space of several years, learn neither the language nor the ways of America. They still shop with their forefinger doing full duty as interpreter. They still work where chance has placed them upon their arrival or where a gang boss, scrupulous or otherwise, has chosen to place them. They have a fear of banks and their investments consist of slipping their earnings under a loose board in the kitchen floor until such time as a land company, honest or otherwise, trades upon the immigrants' almost universal passion for land-ownership and relieves them of the pile. They are neither happy nor contented; they are as alien to America as on the day they left their native shores, and they are not an asset to their community.

Why is the way so difficult? Why is America—and California—not reaping the full benefit which should come from thousands of men and women who have chosen this country as the best possible home in the world and who, in their own land, were probably wide-awake and progressive—else they would have had neither the courage nor the means to come to the other side of the world.

In nine years, ending October 31, 1922, the Commission, through its Bureau of Complaints, has handled 38,023 complaints and applications. A list of these complaints and applications forms a true list of the outstanding difficulties with which the immigrant must cope. And this record shows that a man's first years in a new country are hard years at best; that the habits of life which were his in his own land can not change with the mere fact of his having crossed the ocean; that he can not learn to talk to us overnight, and, not being able to talk to us, he finds the very act of getting through the day a task of which the average native-born has not the slightest idea.

Fraud and the Immigrant.

Not knowing our language, the immigrant is always afraid of doing the wrong thing, until timidity becomes second nature, a timidity which he often tries to hide beneath excessive ease of manner. Unable to speak or to understand what is spoken, he has little chance to grow familiar with the very simplest customs and habits which are different from his own. Therefore he is forever making mistakes, which increases his discomfort. Ignorant of the ways and means of obtaining work, he clings to whatever job he was able to get at the start; yet when that job brings no advancement he grows sullen and dissatisfied. When he falls into this mood he jumps at any chance to better his condition and is grateful for any friendliness shown him. Under these conditions it is not difficult to "fleece" him and the various brands of "sharks", many of them of the same nationality as their victims, reap a rich harvest.

The interest of the state in this condition rests on much more than the desire to secure justice for the injured immigrant, for any fraud, no matter upon whom it is practiced, undermines something of the law and order of the community in which it takes place.

To help solve the immigrants' problems is the task of the Bureau of Complaints; and the work of this bureau falls naturally into three distinct parts, each part functioning toward the same end.

The Bureau as Adjustor.

First of all, the Bureau attends to the specific complaint or application at hand, endeavoring, as quickly and thoroughly as possible, to set at ease the troubled mind of the applicant. If an instance of fraud is reported, immediate steps are taken to untangle the case, to determine where the responsibility belongs and to obtain justice for the injured.

It is here, in its capacity of adjustor of difficulties, that the Commission has its greatest opportunity, which it uses to the utmost, to cooperate with other existing agencies, public and private.

In the act which created the Commission the words "cooperate" and "cooperation" occur six distinct times. Upon close study of the act these words are perceived to stand as definite safeguards against that great danger of any public work—duplication of effort. "The Commission shall * * * have power * * * to cooperate with the state employment bureaus. * * *" "The Commission shall further cooperate with the Superintendent of Public Instruction, * * *" etc., etc., etc. Whenever an agency exists whose work can be made to include the solving of the problem, the Commission is ready to slip that problem into the already adjusted machinery of that agency. Under the present system, whenever the complaint is of such a nature that it can be referred to another agency, the Commission becomes the assistant, the cooperator, furnishing what information it can and retaining active interest in the case until the applicant receives his full measure of justice. In addition to the economy and efficiency of handling the various cases in this manner, there is also a gain in the trust and confidence on the part of the immigrant as he realizes that it is not merely one isolated office which stands ready to help him, but that there are friendliness and assistance on every side.

It is because of this widespread cooperation that the Commission, with its more than limited staff, has been able to handle these 38,023 complaints and applications, furnishing, in the case of every worthy applicant, the indispensable human touch and encouragement, holding itself responsible for the success of each transaction, yet not becoming tied up in the impossible task of trying to solve all the problems alone.

To the immigrant, this side of the bureau's work is proof of the state's interest in his welfare, and this often means a completely new outlook upon America and California or, rather, a *renewal* of the outlook which was his when he first planned his great trip, and which subsequent events too often change and warp.

The realization that the State is interested in their welfare often changes entirely the attitude of a discouraged immigrant. The Commission's signs printed in twelve different languages have been instrumental in bringing thousands of complaints and applications to its offices.

In this connection may be related an incident which took place in the Russian settlement of San Francisco when an employe of the Commission who spoke their language was sent to talk to the Russians on the question of school attendance. She timed her visit to the beginning of their weekly gathering in their meeting house, and began her talk with the statement that she had come as a representative of the state.

Instantly there arose a general delighted murmur and, all over the hall, heads nodded vigorous approval.

The speaker was astonished for she had expected, at best, a tolerant indifference which would grow colder and colder as the object of her

visit was stated. She hesitated, and this pause gave a big, bearded Russian a chance to rise and speak.

"The state has sent her," he said to his people. "See, we were too impatient when we expected the state to send someone when first we came."

A question on the part of the visitor brought out the fact that these immigrants, leaving their home in a body, had discussed the probable nature of the welcome which they would be accorded when they reached their American destination. Failing to receive any welcome whatever, they had lived for years in San Francisco, feeling "not quite at home" because no one had greeted them in their new habitation.

"And think of the state's thoughtfulness," a woman exclaimed, "in sending someone who brought California's greeting in our own tongue."

The circumstance which saves this story from being too much on the sentimental side is the fact that when this agent finally had the opportunity to make known the reason for her visit and requested that more attention be paid to the regularity of the Russian children's school attendance, the response was unbelievably favorable.

Nor is the response of the individual immigrants to the help-giving attitude of the state less whole hearted. The realization that, even without a knowledge of the English language, a man can possess a protection under the law which is equal to that accorded his native-born neighbor paves the way toward good citizenship in a very thorough manner. There was a spectacular case of a Polish immigrant who had lived and worked in California, had fallen into dishonest hands, had been exploited, and had found aid through the office of the Commission. Later he drifted into one of the states of the Middle West and again found himself in great trouble. Immediately he set out to find the office of the Immigration Commission. He was met with blank stares and told that no such organization existed in that state. "At once I started back," he told the Commission's agent in Sacramento. "As far as Truckee I rode, then my money gave out and I walked. I shall not leave California again." The man was put in touch with a reputable employment agency and obtained a steady job, promising the Commission that he would at once begin to attend night school and to work for his citizenship "so as not to be a bother to the state much longer."

The Bureau as Clinic.

Although the work of the Bureau of Complaints in adjusting individual problems is an important one, its work as a clinic is even more significant.

In this capacity the Bureau takes up the work of research, isolating a given problem and determining the circumstances which brought it about. Here the fundamental *causes* of difficulties are sought out.

For example—Tony Monica has lost money which he invested in mining stock of a non-existing mine. The business of getting whatever redress is possible for Tony comes first. But the work of the Bureau does not end there; in fact, the clinic's work begins at this point. How much of the difficulty was due to the fact that Tony could not read the paper which he signed? Was Tony the only sufferer

or are there perhaps scores of others who have not reported their losses? How well do the present laws cover the point in question? What steps can be taken to safeguard others from a like fate?

Or—Otto Nelson brings in a complaint dealing with a fake partnership into which he was persuaded by a wily compatriot who had been in America for many years. Again, the first step on the Commission's part is the task of recovering the money and bringing the guilty one to justice. But, again, the true research begins here. It develops that Otto was met by his "friend" the moment he set foot upon the soil of California, while he was still confused from his journey and so lonely that any man who spoke his own tongue was a true messenger from Heaven. The question immediately arises—is this a widespread practice on the part of "friends"? Also, if it is, can some protection be afforded the newly arriving immigrants at all points of debarkation, and a wholesome and helpful greeting be provided in place of the evil greeting suppressed?

From applications, also, the clinic obtains much material for its study. The numerous questions pertaining to land which were received by the Commission led to the very thorough study of the land question in California, so that inquiries concerning the best lands for any given purpose might be intelligently dealt with. No question can merit more thought and attention than the question of land, for an overwhelming number of immigrants come here for the purpose of fulfilling their inborn desire to own land, which the crowded condition of the native country made impossible.

In this, the research end of its work, the Bureau of Complaints has, from the start, been a very real help in directing the activities of the other departments of the Commission. Some of the most spectacular "clean-ups" on the part of the Department of Labor Camp Inspection took place because of specific complaints against living and working conditions in certain labor camps of the state. Likewise, many housing surveys were made following individual reports on bad housing conditions, these surveys sometimes being instrumental in causing improvements of large housing areas. And the pioneer work of Immigrant Education was turned into certain channels because the study of complaint after complaint pointed to the same great shortcoming—the inability of the foreign-born to speak the language of America.

In making public the results of its findings with regard to the immigrant, the Bureau, in this second capacity, has served to educate the general public in a fuller realization of the entire question of immigration and the meaning of a rational domestic immigration policy which deals with the immigrant after he has arrived in our state.

The Bureau as Law-maker.

The setting straight of individual immigrant tangles is a big task. The study of the causes which brought about these tangles and the quest of possible solutions is bigger still. But the incorporating of practical remedies in the preventive measures of improved legislation is work which carries with it incalculable benefits.

This is the third definite branch of the work of the Bureau of Complaints, and this grows out of the Bureau's own efforts in the line of research and study.

Thus, when the Commission had investigated several hundred complaints against land companies, it determined that the chief trouble lay in the fact that the immigrants, eager to secure land, believed implicitly every word which they read in the newspaper, poster and pamphlet campaign of advertising. It happens that most of the European countries are exceedingly strict in their insistence that advertisements of land adhere absolutely to the facts in the case. Therefore our foreign-born in quest of farm lands did not stop to investigate the truth of the flaming headlines such as "The Greatest Opportunity of a Lifetime" or "The Most Wonderful Farm Lots in the State," which the American has learned to accept for what they are worth. They simply invested, with the natural result. The most effective way to give quick help—in this case—was to make it unlawful to print statements such as the above unless the facts clearly warranted the words used. So the Commission, armed with the evidence gathered through its Bureau of Complaints, laid the case and the suggested solution before the legislature of 1915, and the State Penal Code section 654b, was amended to prohibit exaggerated or misleading statements in advertisements of land.

In a similar way the "Dock zone" law was passed, a law which provides for a zone to be kept clear at docks where immigrants leave their steamers. Entrance to this zone may be had only by special permit or special license. This action was especially necessary when it was thought that the opening of the Panama Canal would give a new route to immigrants bound for California, and it came as the result of the many cases of fraud which had its beginning in the first few moments after the arrival of the immigrants, when all was strange and a fake interpreter, fake charity worker or "friend" seemed indeed a godsend.

Another law in the passing of which the Commission was able to be of help was the amendment to the Penal Code, section 270, which made the father of an illegitimate child responsible for its support. Here, too, the law came as the direct result of the many pathetic stories brought to the Bureau by wronged immigrant girls, and here, too, as in the case of the land fraud law, while being a direct outgrowth of the difficulties cited by the foreign-born, the law brings relief to unnumbered native-born women as well.

Not less noteworthy is the step which the Bureau of Complaints took in 1920 when, after thorough investigation, it disclosed the crooked practices which had grown up around some of the police courts of San Francisco. Here, indeed, was necessity for a thorough revision—for it would take superhuman faith on the part of any newcomer to believe in the sacredness of our laws after being swindled in court.

A complete list of the legislative measures in which the Commission has had a hand is found on another page of this report. A careful study of the list will show how wide is the field into which the problems of the foreign-born have led the Commission.

Legal Aid Societies.

Very early in its existence the Commission realized that there was a crying need for some method whereby the immigrant without means could obtain competent legal advice. Accordingly, some seven years ago, plans were formulated for a Legal Aid Society in San Francisco

which would take care of needy immigrants (as well as needy citizens) whenever legal aid or advice was necessary. This organization has performed and is still performing a very real service and is now receiving help from the Bar Association. A glance at its history will convince the reader that some such means for furnishing information on points of law to all who lack other opportunities to receive it should be provided in every city of the state.

The Bureau of Applications.

Although termed "The Bureau of Complaints," this branch of the Commission's work is, in reality, a Bureau of Complaints and Applications. As a Bureau of Complaints it deals with an injury already received and here the immediate task is remedial in its nature. As a Bureau of Applications it gives information to all who apply for aid in any perplexing problem, and here its task is primarily of the preventive sort.

And, happily, the habit is growing among our foreign-born to find out from the Commission how to avoid mistakes rather than to go to the Commission to have mistakes corrected.

In every one of the Commission's offices there is a register of applications and into this register are entered the inquiries which are brought into the office. This book shows how many times each day the Bureau of Complaints becomes the Bureau of Information, yet here, again, it is a matter of even trade, for information comes into the office even as other information goes out. A page of this register is an illuminating thing indeed.

The ambition inherent in the average immigrant is shown by the great number of inquiries about work. Nor is it alone the men out of work who come to solicit aid in "landing a job." Again and again the Commission is called upon to act as adviser in the securing of work of a higher type than the work in which the applicant is engaged. Often a request comes to help find "the kind of work I did in the old country" or "the kind of work for which I came to America." For, an astonishing number of foreign-born who, in their old home, held positions requiring skill and long training, are here, in California, working as unskilled laborers, unable to rise because of their inability to speak English sufficiently to make known their worth, thus depriving the state of the greater service which they could render if they were placed in their rightful work.

But inquiries do not stop here. There are numerous questions concerning our various laws—laws on labor, on land, on wages, on citizenship, on military service, on city ordinances, on housing, on labor camps. The Commission's agents are expected to furnish help in securing advice on safe investments, on the state's best farm lands, on the most profitable crops, on the best way to educate children. And, sometimes, a bewildered immigrant woman slips in to ask how her half-grown boy, who has learned the language which is still dark to her and has made friends whom she had never seen, can be made to stay at home again in the evenings and be "as he was before."

The Bureau in War Time.

Across the pages of the register which bear the dates of 1917 and 1918 a new word takes first place, the word questionnaire.

The days which followed the registration for the draft were days of a mad rush for the entire force of the Commission. There was much to do in connection with the registration itself—the sending broadcast throughout the state requests to the leaders of foreign-born to assist their countrymen in registering properly, and the keeping in touch with the draft boards in the listing of drafted men who needed immediate instruction in English. But the real work came when registrants began to receive their questionnaires.

Only those who have gone into cantonments and mingled with foreign-born soldiers who did not know our language can have an idea of the number of men who suffered great injustice because they had not filled their questionnaires properly, because they had failed to claim exemption when exemption was their due, or because, not knowing what the questionnaire was for, they paid no attention to it. In its effort to prevent as much of this suffering as possible the Commission crowded its offices far beyond capacity.

Pamphlets.

As part of its campaign of education the Bureau of Complaints has issued for distribution among the immigrants, pamphlets of useful information in Italian, Spanish and Russian. These pamphlets deal with the everyday life of men and women and give information and advice on matters of sanitation, procedure in case of illness, our most obvious laws and ordinances, the duty of becoming a citizen, the process of naturalization, school attendance, etc., etc., etc.

The desire to escape an old age of excessive toil often drives men and women out of their European homes into the promised land of America.

The Question of Attitude.

On the question of the immigrants attitude toward America and Americans there can be little dispute. The very fact of his having preferred America to his native country gives an idea of his admiration and his liking, which characterize the usual *early* feeling of the newcomer toward us. As time goes on, his attitude, in all probability, becomes more or less a reflection of our attitude toward him.

True, it were foolish to argue that every immigrant came here inspired by the highest motives of love of liberty, love of justice and a desire to become a good American citizen and to work for the progress of his adopted land. Many immigrants who are now in America frankly came here to make more money. But, even granting this and not pausing to determine the question whether the desire for economic freedom might not be classed in worthiness with the desire for political freedom, the one great truth remains—The immigrant *chose* America. And, in his eyes, it possesses an excellence which no other country, not even his own, can claim.

It is very different with the attitude of the Americans toward the immigrants. Distrust and ridicule or, at best, condescension and paternalism are, all too often, the atmosphere in which the foreign-born find themselves and to which it is difficult to react with anything but suspicion and sullenness or with timid servility.

The question of *right attitude* is one which, from the start, the Commission recognized as the basis for right dealing with the immigrant and which it has constantly endeavored to promote in the mind of the public. Simply stated, this attitude consists in recognizing that the foreign-born has something to contribute to us as well as something to take from us; in recognizing that, temporarily, the immigrant is at a disadvantage in a new country, and that we must help him lose that disadvantage; and in recognizing that the relation of host and guest must, in a measure, exist until every immigrant is thoroughly and *genuinely* Americanized. And, upon the attitude of host to guest depends, to a very great extent, the usefulness of the newcomer to America.

The Bureau's Work in 1922.

During ten months of the past year, up to November 1, the Commission, through its Bureau of Complaints, has handled 1494 complaints and 1427 applications.

A FEW TYPICAL COMPLAINT CASES.

The Commission here cites a few concrete examples of the difficulties which the immigrants meet on every step and the methods pursued by the Commission in helping with these difficulties. Some of the cases were chosen because they seem so very trifling until one considers how big the trouble would loom to those who can neither ask questions nor offer a word of explanation.

Land Fraud.

Advertisements in California papers gave much space to a marvelous colonization project on land not far from a large city. It was to be a paradise of small farms, and the idea fired the imagination of a Hungarian, influential in a colony of his own people. The agent was delighted. Would the Hungarian trade his city home? And, since he had found the wonderful chance, would he not pass it on to the other members of the colony? Also, to make the work more efficient, would he not act as subagent?

A few months passed during which men signed away their homes in the city, assumed heavy mortgages, and went happily after the will-o'-the-wisp of the small farm of peace and independence.

Then, the flat announcement by the company—"No funds," which meant no improvements, the chaos of bankruptcy, the foreclosure on mortgages by the original owner of the land. And the panic stricken group searching frantically for redress.

It was a complicated affair. The bureau, in its work of research, had to probe very deep into the relations between the company and certain large corporations which backed it, relations which would not bear the light of day. The bureau, in its work of adjustment, had to bring heavy pressure upon these corporations. But at last justice was secured and deeds were obtained for much of the property.

"Baggage Lost."

It seems a step down to the extremely ridiculous when we take this next case, yet, for some minutes, very real tragedy was upon the band of Mexicans who rushed into the Commission's office for help in forcing the railroad company to deliver their baggage. The complaint was that when a baggage check was presented in the baggage room, the attendants brought out some article which did not belong to the claimant. Every one of the Mexicans claimed to have had the same experience. Not one of them could speak English. A moment's questioning brought out the fact that, upon boarding their train the men had given all their claim checks to one of their number for safe keeping. When they arrived in San Francisco, the checks, very thoroughly shuffled, were distributed indiscriminately. To be sure, all that the Commission had to do in this case was to suggest that all the checks be presented at once, with all the men present to claim their rightful belongings, but one can not help wondering how long this perplexed band would have wandered about the streets looking for help if there were no complaint office to turn to.

Meeting a "Friend."

The less educated newcomers are not the only ones who lay themselves open to fraud immediately upon their arrival. The desire to risk all for the sake of success in the new land is even greater in the more cultured class. And the Swiss student who came to California to enter the State University also met a "friend."

In a few days that friend had ready for him a position at which he might pick up a little English before undertaking his studies. He was to work in a real estate and insurance office at a salary of eighty dollars a month. The little preliminaries were quickly arranged—they consisted of putting up the money he had brought with him, two hundred and fifty dollars, as bond for his honesty in exchange for a paper written in English, the receipt for his money, so he was assured, which he signed.

Events moved very quickly then. He found himself pledged by his own signature to a half share in the company, which included half of its obligations as well. Fortunately he was referred to the Commission. The return of the money was easily accomplished and the Commission kept the young man under its observation until he had learned enough English to know the difference between different brands of "receipts."

Employment Fraud.

An enlightening record is that of an employment fraud which was planned in a careful and elaborate manner by an ingenious individual who designated himself as a corporation and advertised in a Polish paper in Toledo, Ohio, that the company would obtain for laborers pleasant employment at stated wages in California. A questionnaire was mailed

to applicants to be filled out and returned with a money order for a sum equal to one-half of the railroad fare from the place of the applicant's residence to Los Angeles, and upon receipt of the questionnaire and money order, a railroad ticket was to be mailed to the prospective employee. Sixteen complaints were received from people who had not received the tickets. An investigation was at once started and it was found that there was no such employment agency. The individual who had engineered the game could not be found. The matter was turned over to the postal authorities for further action, the uncashed money orders found at the "agency's" address were returned to the senders.

Fake Promoters.

Many residents of a foreign district brought in complaints against promoters who were promising employment to purchasers of shares in their company. Later the promise of work was repudiated, but the contract for the purchase of shares strictly adhered to. As this was a violation of the State Labor Laws, the Commission turned the matter over to the Labor Commissioner.

Settling Domestic Difficulties.

The number of times the Commission is called upon to settle trouble between husband and wife and other domestic tangles is almost unbelievable. Post-war days brought many complaints of desertion from Russian girls who had lived in Siberia and had married American soldiers there. Once back in their home land the soldiers had quickly tired of their wives with whom they could converse only in sign language. Desertion after desertion was reported, the women being left absolutely stranded without funds or friends. By locating the husbands and calling upon the district attorney for aid, small weekly payments were obtained.

Several aged immigrant women have complained of non-support where children were well able to render assistance. These cases are, almost without exception, settled by a single letter from the Commission, and the deserved help obtained.

Aiding a Happy Marriage.

A short time ago, the agent of the Commission who speaks practically all the languages of southern Europe, was called upon by the Travelers' Aid to straighten out what seemed to be an effort to wrong a young girl. Arriving at the Travelers' Aid office he found the girl safely "hidden" in an inner room while a very red faced young Slavonian was frantically explaining to the girl's "guardian" something which he had evidently explained a dozen times already—that he had known the girl from babyhood, that they had been engaged almost as long, that he had sent money to her for her passage to America, and that here she was, and they were to be married within two weeks. Therefore he wanted to take her to the home of her aunt who was waiting for her. The Travelers' Aid agent, however, had another story. She had seen the young girl, alone, unprotected, without the knowledge of a word of English, approached by this Slavonian. She could not get the girl's story, therefore she was taking no chances. In this case the unusual happy ending took place. The excited young man suddenly remem-

bered a letter from the girl's father which he had in his pocket, and which contained the father's blessing. The name in the letter corresponded with the name on the girl's documents, her story, which she told the Commission agent matched exactly the story of the youth, and the girl was "set free" but not before the agent had given his word that he would get in touch with the girl's aunt.

Holding Back Wages.

The means taken to defraud newcomers are often startling, but this particular case furnishes a new idea in this line.

A man of foreign birth was employed in a certain office as janitor. At the time of his employment he was asked whether he was an American citizen and had replied that he had taken out his first papers but had lost them. When he left the work and came for his wages he was told to put down on paper the contents of these first papers. When he failed to do so he was told that his wages could not be paid him on this account. The case was turned over to the Labor Commissioner and the Bureau of Complaints had another bit of information of the pitfalls which surround our immigrants.

The list of complaints stretches on and on, and the stories could be told for many hundreds of pages. But perhaps enough of the actual cases has been given to show how necessary it is for the immigrant to have a little thoughtful protection until he learns how to protect himself.

An Italian village—with the immigrant, home building is an ancient art, highly developed.

HOUSING.

There is a vital connection between good housing and good citizenship. There is a still more vital connection between bad housing and bad citizenship. An organization which works for the welfare of any group of people must necessarily take into consideration the conditions under which these people live, and, if these conditions are not satisfactory, must work for their improvement. And even more than in the case of our native-born groups is this true when the people in question are our immigrants.

The reason for this is not difficult to find. The two most important considerations which govern the immigrants in the selection of their homes are (1) nearness to people of their own nationality and (2) low rents. The first is natural because of the loneliness of which most

The "shack area" of a California city. In addition to all other ills it is a fire menace of the worst sort. Such districts are impossible under wise City Planning.

newcomers are victims and their desire to be able to talk to someone; the second no less natural on account of the instinctive tight hold which men, in the face of an uncertain future, keep upon their small savings.

After years of immigration, congestion in these "foreign districts" becomes terrific. The section in which the foreign-born settle is usually in the old part of the city—hemmed in on all sides so that expansion is possible only by the very slow process of replacement. So it means a "doubling up" and, later on, another "doubling up," a crowding to which unscrupulous or careless landlords contribute in great measure.

Slum areas thus come into being, depressing and degrading their inhabitants physically, mentally, and morally. Growing slowly and almost imperceptibly, these sections are left wholly to themselves, all responsibility for them shrugged away with that most unjust of myths behind which many a landlord has taken refuge, the myth that "immi-

grants love dirt." Then, when it is too late for any quick remedy, communities suddenly awake to the menace of these areas and the realization that they can be done away with only after decades of strenuous work on the part of all interested agencies and an enlightened and helpful attitude on the part of the public at large.

Parenthetically, it should be mentioned that in this state another myth retards the work of improved housing, the belief which is happily on the decline, that slum districts exist only in the large cities of the east and that California is free from this evil, whereas almost the opposite is true. Almost every city, small as well as large, has a well defined slum district, its "below the tracks," its "southtown," its "Mexican village," its "Chinatown," districts in which men, women and children are trying to make homes of tumbledown, leaky, draughty, unspeakably dirty tenements and shacks and are failing miserably in the attempt, until the very instinct for home-making is hopelessly crushed.

The close connection between the quality of housing and the quality of citizenship, mentioned above, and the impossibility of improving the lives of our immigrants without improving their homes, made housing a logical addition to the work of a Commission of Immigration. For it was felt that, unless it had supervision of the housing in the state, even though it controlled other phases of work for the immigrants, the Commission would be in the position of a man in a leaky boat who bends all his efforts to the plugging of all holes except one and leaves that one to do what harm it can.

Economy and Efficiency.

The creating act of the Commission gave it powers in the field of housing as follows:

It shall be the duty of the commission to call to the attention of the proper authorities any violations it may discover of the tenement house laws, and other laws pertaining to housing conditions. The commission shall investigate and study the general economic, housing and social conditions of immigrants within the state, for the purpose of inducing remedial action by the various agencies of the state possessing requisite jurisdiction, and shall generally, in conjunction with existing public and private agencies, consider and devise means to promote the welfare of the state. The members of the commission of immigration and housing or any of their authorized agents shall have the right to enter into tenement houses, buildings, and dwelling places for the purpose of inspecting such houses, buildings and dwelling places to secure compliance with state tenement and building acts and municipal building ordinances and to prevent violations thereof, and shall have the right to examine the records of the various city departments charged with the enforcement of the tenement house law and other building regulations and to secure from them reports and copies of their records at any time.

The toilet problem usually accompanies the shack problem.

An abandoned chicken house used as a dwelling place by a man.

A near view of a typical shack. Showing the need for supervision over the single family dwellings.

The problem of the large dwellings is not the worst housing problem in California. This shack, about to collapse, is occupied by a Chinese family.

The interior of a shack. This condition violates practically every provision of the State Housing Law.

It will be seen from the above that, by this act, the existing scheme for the actual enforcement of housing laws was not disturbed. It still remained in the hands of the municipalities. But there was created a state body whose duty it was to see to it that this enforcement took place, a commission to induce "remedial action by the various agencies possessing requisite jurisdiction" and "to secure compliance with state tenement and building acts and municipal building ordinances and to prevent violations thereof." Once more was the Commission counting on cooperation, cooperation in this case from these existing agencies "possessing requisite jurisdiction."

There was, to be sure, a great deal of initial difficulty entailed in this plan. For, although a few of the cities of the state had gone far in the

Not conducive to the development of the finest ideals of good citizenship.

matter of good housing, maintaining housing inspectors as part of their official staff, the majority of the cities were paying little or no attention to their housing problems and seemed to be quite oblivious to the existence of the State Housing Laws.

But the Commission felt that the above method would prove the most satisfactory in the end, since it left the problem where it belonged, with the municipal government. To enlist the friendly cooperation of these cities, to convince them of the need for housing work, and to aid them in organizing adequate housing departments became one of the first tasks of the Commission.

Another reason for adopting the scheme outlined in the act was its promise of the greatest efficiency for the smallest outlay of the state's

The problem of the tenement is more than a problem of physical well-being. The youngster here has the choice of this "playground" or the street for his recreation.

Light court built in accordance with state housing laws to improve old buildings by ventilating and lighting eight inside rooms.

The tenement problem was the first attacked by the Commission in its investigations. Rear view of tenement showing wholly inadequate light court.

money. Under this scheme, the housing department of the Commission, with a staff of a housing director and three or four inspectors, could supervise the entire state and keep in touch with housing activities in all its cities. At the same time, the authority of the housing and health officers in these cities would not be lessened in the slightest degree. But the state coordinating body, the Commission, would be there at all times to help, to advise, and to interpret even while it held the cities responsible for observance of the state's laws.

Although later acts of the legislature materially broadened and increased the duties and powers of the Commission, the fundamental *method* of operation still remains as indicated above.

Sleeping "stalls" in a lodging house of a California city. These are not permitted under the present state housing laws.

The First Efforts.

The first four years of its existence, 1913 to 1917, the Commission devoted to making housing surveys, both extensive and intensive, in the larger cities of the state, each inspection being followed by specific indications of violations of existing laws, by concrete recommendations for improvement and by whatever assistance was needed to remedy the faults.

Through these surveys, the Commission, in addition to actual improving of living conditions, became thoroughly acquainted with its task; it was able, by making public the results of its investigations, to educate the state to the existence of a grave housing problem and the necessity for its solution; it enlisted the cooperation of most of the cities with which it had come in contact; and it gathered invaluable data on which to base the new State Housing Laws, the preparation of which it had contemplated from the moment of its organization and which were to replace the then existing, wholly inadequate statutes.

Another common menace to health—the kitchen window opens into a goat sty.

The problem of sanitation is as important as that of housing. A common back-yard scene, where adequate inspection is wanting.

San Francisco.

The first of these surveys, in the spring of 1914, was made in San Francisco, which, being an older city and possessing a very large alien population, was conceded to present probably the gravest problem. Two solid blocks on Telegraph Hill were chosen, as one of the centers of immigrant population, and a house to house investigation was conducted. Also, a study was made of fifty tenements in other locations selected at random. Avoiding generalities, the Commission prepared charts which showed the exact condition of the buildings visited and proved violations of the state laws by actual figures and measurements.

This survey was conducted, primarily, for the purpose of aiding the more far-sighted city officials in their efforts to have housing inspectors appointed. When it was found that in thirty-four tenements there were 392 major and innumerable minor violations of the State Tenement Law, this argument for inspectors became unanswerable.

A three-apartment dwelling. This type is fairly common in the southern part of the state.

The results of this survey were submitted to the San Francisco Board of Health in April of 1914. The Commission then cooperated with this agency, with the Housing Association, and with other interested agencies in petitioning the board of supervisors for the creation of positions of city housing inspectors. This position was granted in June and the inspectors, two in number, were appointed in July. This marked the beginning of San Francisco's present housing inspection department. And this work—aiding cities in the organization of their housing departments—remains to this day one of the most important duties of the Commission's housing department.

Other Cities.

Sacramento, Fresno, Bakersfield, Santa Rosa, Visalia, Eureka, Galt, and Isleton were visited in the same year and careful surveys made in each city. It was found that, while housing violations were practically the same in all cities—inside rooms, poor light and ventilation,

inadequate and filthy toilets, lack of bathing facilities, great fire danger and general lack of sanitation and cleanliness—still, every city had its own peculiar problem which needed special treatment. In San Francisco it was the problem of the inside room. In Sacramento it proved to be cellar dwellings. In Fresno the special problem was that of “shacks.”

The Commission had already begun work on the Single Dwelling Law which it hoped to add to improved laws governing tenements and hotels, and the discovery of the “shack area” in Fresno’s immigrant quarter convinced it still more that, in California, the small house problem was at least as important as the problem of the tenement, because it affected such a large number of families and because no regulation whatever of the small house had been attempted by the state.

The Fresno health authorities were eager to cooperate with the Commission in every way possible and the first definite result of the survey was the drawing up of local dwelling and lodging house ordinances to guide the city’s housing work. This marked a tremendous step in local housing legislation.

In the smaller cities the Commission’s housing expert and the sanitary engineer were kept extremely busy suggesting plans for sewer systems, remedying water pollution, helping settle disputes between hotel owners and city health officers and impressing upon the minds of city authorities everywhere the need for municipal housing departments and regular housing inspections.

Los Angeles and San Diego.

In these two cities the work of the Commission in the first two years took on a different aspect. Here was no need for pioneering or of convincing city authorities that bad housing conditions existed in their territory for the city authorities were well aware of the fact. Both

“My home for twenty-five years,” the owner of this shack said to the Commission’s inspector.

these cities, at the time of the Commission's organization, had well organized housing departments and several inspectors were devoting their entire time to the searching out of violations of the state laws and preventing further violations.

In Los Angeles the Commission was asked to assist the city in making surveys of its school districts in the foreign-born sections and in making a comprehensive survey of its greatest sore—Chinatown. The scope and thoroughness of these surveys may be gathered from the chapters on Housing in the Commission's report of January 2, 1916, which gives a profusely illustrated history of the work done.

Stockton.

This city was covered in 1915 and found in need of immediate betterment of its housing conditions. In fact, so very bad was the state of affairs which the first survey disclosed, and so very many difficulties were encountered in the seven years' housing campaign which followed, that it is with special pleasure that the Commission points to Stockton's 1922 record, described further on in this report, a record of which any progressive city may feel justly proud.

Purpose of Surveys.

In all its early surveys and inspections the Commission was working with several ends in view. Obtaining compliance with the state housing laws was, of course, the first issue. A detailed, first-hand study of the prevailing abuses in the field of housing was another, for the Commission was already making plans for the new tenement and hotel bills which should come before the legislature in 1917 and, as in the case of the Bureau of Complaints, it wanted a story of actual conditions upon which to base corrective recommendations. Also, it was extremely anxious to introduce a single dwelling bill again (the first effort in this direction was defeated by the legislature of 1915) and for this reason it redoubled its efforts in pointing out the evils of insanitary small houses. And, finally, the Commission was finding, in its housing surveys, a vast amount of material for the study of the immigrant question and one of the best ways of solving certain of his problems, both in and outside the field of housing.

In this last connection may be mentioned the Commission's early housing surveys which threw additional emphasis upon the need of the Home Teacher Law upon which the Commission's department of Immigrant Education was then working. The difficulties with which the immigrant woman is surrounded in her daily life, disclosed by these housing surveys, were put to good use in educating the public of California to the need for the law.

The Greatest Gain.

The concrete results of these surveys and inspections during the years of the Commission's work would make a formidable chart. Yet a much greater value should be attached to the education which resulted for the state as a whole through these investigations and disclosures as well as to the means taken to secure improvements of the bad conditions disclosed. Slowly, but very steadily, the conception of better housing as a far-fetched theory of enthusiasts was changing to the realization that it is a legitimate and necessary work of every good city government.

The Housing Institute—The Laws of 1917.

As has been mentioned above, immediately upon its formation, the Commission, convinced that the housing laws of the state should be amended and improved, began its plans for these amendments and improvements. And every survey in which it took part in the first years but deepened the conviction that the foundations of a new era in housing must lie in improved legislation.

Also, in these various surveys, the Commission had the opportunity to see how many different professions and occupations are touched by housing, and to become convinced that if the new housing laws were to be acceptable to the state as a whole and were to avoid future friction they would have to reflect the views of many people in addition to building experts. Accordingly, in the preparation of these laws, the Commission used an experiment which was probably the first of its kind ever attempted. This was the Housing Institute.

In 1916 a series of conferences was called for the purpose of amending the then existing Tenement and Hotel Laws and to combine with them a third, the Dwelling House Law for which there appeared to be a need as great as for the other two.

Various communities officially sent to these conferences building inspectors, health officers, fire chiefs, architects, engineers, and corporation attorneys; and there were present also representatives of hotel organizations, apartment owners' associations, builders' organizations, real estate boards, and social workers. Those attending considered outlines of the proposed laws as prepared by legal and building experts employed by the Commission and offered changes, revisions, and amendments, many of which were later incorporated in the new bills. The final drafts were practically unanimously approved by the entire Institute membership.

Prepared in this manner, the three bills were introduced in the legislature in 1917 and were enacted at that time, a long step in the state's program of better housing.

These three new acts put into the hands of the Commission the power of enforcement, under certain limited conditions, when local authorities fail to enforce.

Publication.

Under this improved legislation the Commission went to its task with a new effort, and cooperation between its inspectors and city officials became even better as there appeared this more tangible and more comprehensive guide in the form of the new laws.

To make the problem of law enforcement easier for the various municipalities, the Commission had already printed, in 1916, an A. B. C. of Housing which gave in the simplest of terms the requirements and meaning of good housing. There was also published a Plan for a Housing Survey which furnished a comprehensive description of the various steps necessary in a thorough investigation. There was now added the State Housing Manual which contained the three new laws, covering Tenements, Hotels and Dwellings, printed with all full annotations.

War Housing.

From December, 1917, to the middle of 1918 the Housing Department directed all its efforts to helping with the war work. The Commission's director of housing was called to federal service. Immediate steps were necessary to provide homes for the many additional men employed in war industries, notably the shipyards. The Commission gave a great deal of time to aiding in the planning of adequate relief for the housing shortage in Oakland, Alameda, Vallejo, and San Pedro.

It must be noted here that the war, although it depressed all building for a time, brought out many arguments in favor of improved housing which will have their influence upon building methods and especially upon City Planning for many years to come. The total inability of the cities throughout the United States to meet an emergency—which was demonstrated so startlingly when munitions factories found themselves in desperate straits because the workers they needed could not be housed in their cities—will make the work of city planners much more simple in the future.

The Attitude of the Immigrants.

In all this summary of the work of the past years it might seem that sight were being lost of the particular angle from which the Commission approached the problem—the relation of housing to the immigrant. Yet it is an outstanding fact that although many thousand of native-born Americans live in the wretchedest of habitations, practically all of the surveys and investigations begin in the immigrant quarters. Which does not indicate that our friends from Italy or from Sweden dislike dirt any less than do the Americans but does seem to indicate that they will “put up” with greater abuses without complaint both because they neither dare nor know how to go about having these abuses corrected and because absence of some of the “modern conveniences” in their native villages makes it less difficult for them to accept their surroundings with comparative calm, even when these surroundings cast a permanent gloom over their lives here.

The Commission's inspectors could tell some startling tales of the change in the outlook upon life on the part of our foreign-born who, having grown accustomed to the squalor of the inside room, have watched both air and light come into their dwellings through simple alterations which followed a thoughtful inspection. Wherever an opportunity is given the immigrants to improve their surroundings even a little they rise to it with an eagerness which should shame every careless or misinformed city official.

As a result of superficial observation it has long been conceded that Mexicans care less for cleanliness and comfort than any other people. Yet anyone who has seen the pride and joy which Mexicans, who formerly lived in degrading surroundings, now take in their little concrete cottages erected at the Commission's suggestion throughout the citrus belt of southern California, will never slip back to the old erroneous view.

Another striking refutation of the common misconception is found in the so-called “American Houses” in Italy. As the photograph shows, these are not American in style. But they are built by Italian emigrants who have returned from America and they are built with American money. In America these emigrants lived in congested tenements, in

tumbledown shacks, in dark unventilated rooms. But, once back in their native land, they built for themselves comfortable homes because they had observed that "real Americans" live decently. Thus, *in spite of America* they had become Americanized in their conception of homes. To be sure, Italy profited by America's negligence, yet it is a sad reflection upon our country, for these homes, solid, roomy and comfortable, reflecting the stability of their owners, could easily have been built in America, if we had given the slightest encouragement.

"American Houses" in Italy. Built by returned immigrants who had fared well in America.

Additional Responsibility.

The legislature of 1917 which passed the three housing laws also amended the creating act of the Commission to include new and greater responsibilities in housing. Section 15 of that act states:

The commission may make investigations of the housing of immigrants and working people and of city planning in California and elsewhere, may encourage the creation of local city planning commissions and may furnish information as to the progress of other cities for the use of such commissions. It may investigate and report upon defective housing and the evils resulting therefrom and the work being done to remedy the same in California and elsewhere. It may make studies of the operation and enforcement of building and tenement house laws, of housing finances and taxes, of zoning and districting regulation and may promote the formation of organizations intended to increase the supply of wholesome homes for the people, and aid in the enforcement of any laws enacted to promote the purposes for which the commission was established.

Another amendment, section 16, defines the duties of these city planning commissions toward the Commission and gives the Commission authority to call representatives of these commissions together and to employ city planners whenever it deems this necessary.

These amendments mark a new and a much bigger idea in the work of housing, an idea which must necessarily lie at the root of all good housing, the only means whereby repetition of the dreadful mistakes of the past may be avoided. This is the idea of city planning.

But although the idea of city planning is new, California can point to several interesting projects in this field. Noteworthy among these is the plan which has just been worked out by the city of Bakersfield, which shows that city planning need not be an elaborate, involved, or expensive process, and that, properly directed, it adapts itself to the particular needs of any city or town. This Bakersfield experience shows at its best the progressive spirit of a city and a highly developed sense of community responsibility, and its story can best be given by reproducing the report made by an inspector of the Commission who was asked to assist the city authorities in their plan.

NOTES ON THE BAKERSFIELD HOUSING SURVEY AND THE PROPOSED BUILDING PROGRAM OF THE CIVIC COMMERCIAL ASSOCIATION.

At the request of the Civic Commercial Association, an organization of Bakersfield business men, the Commission of Immigration and Housing recently made a survey of housing conditions in the above city. The survey was confined to four square blocks in the old red light and Chinatown sections, extending from 20th to 22d streets, and from L to N streets, together with an inspection of several shacks at 24th and N streets.

Generally speaking, the housing in this section is nothing more nor less than a collection of dilapidated frame shacks and a few crumbling brick and plaster structures inhabited by negroes, Chinese and Mexicans, the last predominating. The area lies about two blocks from the business center of town and presents a most unsightly appearance.

The cooperation of the city officials was enlisted at the inception of the survey and the various departments extended valuable assistance in the inspection work.

The investigation was made in company with the building inspector, fire chief and a Chinese interpreter, and some sixty places of abode were visited. Living conditions, generally, were found to be deplorable, and a considerable number of the denizens of this area are living underground. The places are fire traps, poorly wired, abounding in blocked passageways, and would be extremely dangerous in the event of a conflagration. It developed that food for public consumption was being prepared under the most filthy and disease-breeding conditions in certain of the buildings inspected.

Pictures of typical shacks are attached hereto. They are beyond repair and any effort to remodel them would only tend to perpetuate the shack nuisance. Therefore, it would seem that the logical course to pursue would be to have them declared public nuisances and to provide for their demolition. Any move in this direction will undoubtedly be met with strong opposition by owners of the structures. However, an ordinance framed along the lines suggested by the commission, giving the city health officer power to declare insanitary structures public nuisances and to provide for their abatement, is now being prepared by the Bakersfield city attorney, and it is intended to present it to the city council at the next meeting.

Up to the time of our entry, the local officers had made no effort to force compliance with the state housing laws in this district. They have been criticised for their apathetic attitude and for allowing such deplorable conditions to continue, but, as the city manager expressed it, the program that the city would have to undertake would be a destructive and ill-advised one at this time, due to the fact that the occupants of these hovels would be obliged to seek other places of shelter that are not available on account of the housing shortage. Therefore, it was felt that a constructive housing program should first be undertaken. The desire of the Civic Commercial Association to aid in this connection seems to present a probable happy solution of the difficulty.

At a meeting of the Clean-up Committee composed of five members of the Civic Commercial Association various phases of the work in connection with the survey were discussed, and the writer informed the committee that the assistance of the Association would be of the most value if its efforts and resources were directed toward a constructive housing program, a home-building scheme that would attract the poorer classes of unskilled labor, principally the Mexican element. Precedent has yet to be established in this direction as no similar schemes have been undertaken in the west. However, at the request of the Committee, a plan based upon the Industrial housing projects in the citrus district of Los Angeles County was outlined and discussed at length.

It was suggested that a suitable tract of land be obtained for the establishment of a colony and that a settlement be built along the general lines of the industrial housing projects at San Dimas, La Verne, Azusa, Upland and other settlements. The committee was intensely interested and the secretary was instructed to obtain information regarding the above-mentioned projects and to secure blueprints of houses of a suitable character from the Immigration and Housing Commission.

The secretary was instructed to have a survey made in that district to determine the following facts: number of adults, number of children, nationalities, earning capacity, place of employment, permanent or migratory character of the people, preference for renting or owning a home, rental now paid and kind of house desired.

While it is not going to be practicable to effect a complete transfer of the people who are now poorly housed into better habitations that might be prepared for them, such a survey is intended to give the association definite information as to the proper housing really needed.

The secretary was further instructed to make arrangements for securing an option on a suitable tract of land large enough for the erection of forty houses and to obtain figures on the cost of erecting four-room concrete structures.

The proposed housing project is not an industrial one, but rather a scheme for providing homes for unskilled laborers, principally Mexicans, engaged in various branches of industry, those homes to be sold on long term payments at a low rate of interest. With this in mind, it is quite evident that the project should be worked out along somewhat different lines than the industrial units referred to above—more ground space must be allowed; it will probably be advisable to lay out the streets differently; inexpensive changes in the exterior designs of the different houses is a rather essential feature—all of these phases are details of the scheme to be handled by an architect.

In the latter connection the committee was told of the interest expressed in the proposed plan by the San Francisco Chapter of the American Institute of Architects, of the institute's cooperation with the U. S. Department of Commerce on the small house problem, and of the assistance that the institute might render in the local situation.

The next move of the committee will be the submitting of a definite building program to the board of directors of the Civic Commercial Association. This association has already fostered one home building program that has developed into a decided success and the experience gained in the venture will undoubtedly be of value in the present developments.

Another important example of city planning on a smaller scale is the project of the city of Dinuba, already begun, to provide decent homes for its seasonal workers. The Chamber of Commerce is back of this movement, and the Commission has been called in to help in planning the new "town." The hope back of this scheme—aside from the attractive appearance which it will give to the section—is that the seasonal workers will remain and become permanent residents, for the migratory and seasonal workers are not always an asset to a community. There seems to be no doubt in the mind of Dinuba of the relation of good homes to good citizens.

To date many city planning commissions have been organized in the State of California. The Commission keeps in touch with them through their reports and by personal contact, aiding their efforts in every possible way and encouraging the formation of new commissions.

Industrial Housing.

Many recent industrial housing schemes have been developed and put into effect in the fruit districts of the state. But this phase of the work grew out of the Commission's efforts in labor camp inspection and improvement, and are treated in the section of the report devoted to the activities of that department.

An adobe house for the laborers on fruit ranches. Inexpensive and very attractive.

A model cottage of a type built for Mexican citrus workers in Southern California. The improvement in the work of these men after moving into these new quarters is very marked.

Individual cottages built for its workers by a progressive industry.

Type of homes built in large numbers for renting to workers—mostly foreign-born—of a big industry.

The Building of Homes.

Together with the opportunity to supervise city planning, the Commission had been given the opportunity to assist in the building of homes throughout the state. The necessity for action in this line becomes greater and greater each day, and the Commission office is swamped with inquiries on methods of stimulating building in certain localities and methods of helping prospective home owners to finance their venture.

In answer to this demand the Commission has made and is making a thorough study of the building situation in California and of various means of financing building employed in the United States and in Europe. The results of this study will be presented, with suitable recommendations, to the legislature of 1923.

The Housing Department in 1922.

The Housing Department of the Commission was reorganized in August of 1921 to meet the greater demands of post-war activities in this field. The year 1922 has been an extremely busy one, and only the briefest outline of its most important work is given here.

City Planning.

Immediately upon its reorganization the Commission attacked very energetically its task of stimulating city planning throughout the state. Letters were sent to all the city planning commissions asking for reports of progress and offering the services of the Commission. Some of the reports received in answer to these letters indicated that many cities had already gone far in this field. One city wrote of its experience in city planning as follows:

The zoning laws have created conditions whereby home owners are given a sense of security. This law has brought substantial returns to the city treasury as a result of the impetus thus given building operations for which statistics can be furnished. Furthermore, the topography of the city is such that industrial development on a large scale may reasonably be expected and in fact has already begun, thirty industrial establishments having already located here. At least one industry with international connections has come to this city because of the protection furnished under our zone laws. It has been conservatively estimated that the city's income has been increased by \$35,000 annually as a direct result of the zone laws of the city.

To awaken other cities to the possibilities offered by rational planning is a task which the Commission considers of greatest importance and to which much effort has been directed during the year. Some of its experiences in city planning are given on the preceding pages under that head.

The Passing of the Inside Room.

In view of the bitter fight which the State has waged against the vicious inside room, the Commission feels very happy in announcing

that a housing survey made in 1922 in the cities of Fresno, Stockton, and Salinas, showed that in these cities the inside room has practically disappeared. It is especially interesting, in this connection, to turn to the Commission's report of 1916 and read in the section marked "Stockton":

One of the worst violations of the law was that of section 77 pertaining to inside rooms. Violations of this section were found in twenty-one out of the thirty houses.

The inside room—a feature of bad housing which several cities of California, in cooperation with the Commission, have succeeded in eradicating.

Light court built to provide means of ventilation for six dark rooms.

Needless to say, Stockton, as well as the other cities cited, has had a long, hard fight against the nuisance. Since the other violations of the law have probably diminished in proportion, these cities may well take a just pride in their achievements.

It is certain that many other cities will be able to announce similar conditions in the very near future.

The New El Monte "Town."

In El Monte, a city in Los Angeles County, an entire settlement of Mexican laborers was moved from the banks of a river where living had become unsafe through floods and was carried to higher ground. Much rebuilding, of course, became necessary, the river here playing a part in improved housing, for the origi-

nal settlement was a mass of shacks. The Commission was called upon to advise in the arrangement of the new settlement, the erection of proper toilets, the furnishing of the proper water supply and matters of general sanitation. Cooperation and financial aid were extended by citizens of El Monte and the Los Angeles Branch of the Presbyterian Home Mission Board of New York.

Examination of Building Plans.

An ever growing branch of the Commission's housing work is the examination of building plans, which has been rapidly developing in 1922. It is, of course, much easier to correct violations of housing laws while they are still on paper than to adjust them after the building is completed. The very real help which may be rendered by a thoughtful attitude toward this angle of the work is clearly seen from the two letters taken from the Commission's 1922 files, the first from a well-known educator, the second from a member of a firm of architects and engineers:

The promptness and thoroughness with which you have analyzed and pointed out the deficiencies in the documents returned to me call for my thankful acknowledgments as well as for my admiration.

In the construction of the proposed houses I shall gladly follow your suggestions.

It will be a pleasure if I can in any way further the good object your Commission has in view; for I realize its great importance to the welfare of the country.

The second letter reads:

Please accept this letter as an appropriate tribute to express my appreciation for the many courtesies extended to myself and to our entire organization in advising and assisting us with the proper interpretation of the various state laws as they apply to building construction.

In the instance of the ----- Apartment House your help and knowledge of the proper application of the law and your intercession with the city authorities actually prevented the owner from abandoning the project entirely.

The usual official red tape would have probably been fatal to the enterprise, whereas your architectural training rendered the problem simple to you.

I don't believe you realize to what an extent such an organization as yours is helpful in furthering the development and improvement of property and in the ultimate building up of a community.

Organization of City Housing Departments.

The first survey which the Commission made, in 1914, was, primarily for the purpose of securing the appointment of city housing inspectors. The Commission still holds that no work is more important than aiding the various cities in securing such appointments. The last cities in which housing departments were either organized or enlarged were San Jose, Stockton, Fresno, Modesto, and Long Beach. In Long Beach a very thorough bit of work was done by the city authorities with the cooperation of the Commission, the housing department being organized after extensive surveys had been completed.

Housing Inspections.

In the rush of the newer and ever broadening work, the Commission's housing department has not lost sight of its original duty—the securing of compliance with the state housing laws in cooperation with the cities involved. With this end in view surveys were made in 1922 in the following cities: Auburn, Anaheim, Capitola, Carmel, Del Monte, Dinuba, Dunsmuir, Elsinore, Eureka, Fullerton, Fort Bragg, Hanford,

Huntington Beach, Los Angeles, Lodi, Marysville, Merced, Modesto, Monterey, Madera, Monrovia, Napa, Oroville, Pacific Grove, Pomona, Pasadena, Roseville, Red Bluff, Redding, San Luis Obispo, San Francisco, Sisson, San Jose, Salinas, Santa Cruz, Sacramento, Stockton, Santa Rosa, Torrance, Vallejo, Weed, Watsonville, Whittier, Willows, and Willits.

Bakersfield's Building Code.

The far-sighted city of Bakersfield has been working on a building code to govern its building operations and the Commission had an opportunity to send its representative to the meetings to work with the city authorities in the preparation of this code.

This is a task which the Commission feels should be undertaken on a larger scale by the state so that all cities might have a fundamentally uniform code. Toward this end the Commission is now working.

Book on Housing and City Planning.

During 1922 the Commission's Housing Department prepared a comprehensive book on Housing and City Planning, which will probably be printed during the early half of 1923. This book gives helpful suggestions in the building of homes, beginning with the least expensive, and is, throughout, an up-to-date manual in the problems of housing which are of greatest interest to the public today.

Housing Shortage Survey.

Having, as one of its duties, the encouragement of home building in the state, the Commission was interested in the "Flaherty Bill" which passed the legislature in 1921, and which directed the Commission to

"investigate the practicability of the State of California assisting workingmen to acquire and build homes, and to report to the next session of the legislature a bill or bills embodying a plan and the method of carrying it out whereby, with the assistance of the state, workingmen may acquire lots of ground and build houses thereon, such lots and houses to become homesteads and to be sold on the installment plan."

A considerable amount of material was gathered in 1921, including detailed reports on overcrowding, the relation that exists between bad housing and infant mortality, tuberculosis and the various communicable diseases, as well as detailed reports on various financial methods adopted in European countries and other states of the United States to relieve the housing shortage.

During 1922 more material was collected and actual congestion surveys were made in San Francisco, Los Angeles, Oakland, and Berkeley. These surveys were made in the last quarter of the year so that the bill embodying the recommendations of the Commission might be based upon the very latest data obtainable.

Plans for the Future.

First on the housing program for the coming year is the stimulating of home building and the encouraging of the formation of additional city planning commissions. The working out of financial plans in connection with the increased building program will be a big task. Even more energy is to be devoted to the Commission's first duty—the working with various municipalities in the line of law enforcement. The

housing laws of 1917 should be modified to meet present conditions. For in the five years which have gone since the enactment of these laws the Commission has had unparalleled opportunity to observe their working, and can now see many points which should be improved upon. Consequently, the Commission issued a call for a second housing institute, like that held during 1916. The first meeting took place in San Francisco on December 14, 1922. The results will be certain amendments to the existing laws which the institute will present to the 1923 legislature.

Small, comfortable houses, insuring privacy and independence. Built for workingmen who receive small wages.

IMMIGRANT EDUCATION.

In the fall of 1920 the State Board of Education added a new department to its activities, the Department of Immigrant Education.

This was the goal toward which the Commission of Immigration and Housing, aided by several progressive educators and educational agencies, has steadily worked since its organization, to have the State give to the education of our foreign-born a dignity equal to that accorded to the other branches of instruction.

Rational surveys, practical experiments, progressive legislation, and a tireless campaign to awaken public interest and to enlist public sentiment—all this on the part of the Commission—combined with the far-sighted attitude on the part of the State Superintendent of Public Instruction, made the move possible. And this move laid the foundations of an institution which, a decade ago, would have been considered useless and extravagant but which, a decade hence, will be as indispensable to our civilization as our high schools and our universities.

It seems fitting, at this point, to give recognition to the service in this field of Mrs. Frank A. Gibson of Los Angeles, ex-commissioner of the Commission of Immigration and Housing. The Commission's Department of Immigrant Education was placed under Mrs. Gibson's supervision, and it is to her clear vision, to her energy and enthusiasm and to her readiness to sacrifice her personal interests in her service to this undertaking, that the State owes, in a very great measure, its present far-reaching policy in the education of its foreign-born.

The Importance of a Common Language.

Even if we were sure that not another immigrant would ever be added to those already in California, the question of how to help those already here to become true citizens of the state and of the nation would still be tremendously important.

This was the thought with which the Commission, in 1913, attacked the problem of immigrant education. The state had built up and was maintaining an expensive and elaborate system of education for the development and training of native-born citizens. Yet it was just as essential to have a department and a plan for the assimilation of the hundreds of thousands of foreign-born potential citizens who came to live in our state.

The most important step in this assimilation and training is, of course, the learning of English. This is necessary for the obvious reason that a man or woman who can not talk with and understand Americans can not become an American. It is also necessary for another reason, less obvious but no less important—that without the knowledge of English, the immigrant can not make himself known to America, and his potential cultural contributions to the community in which he finds himself must remain locked away because he can not speak English. Thousands of immigrants who live in our midst today are looked down upon as "ignorant" while in reality their cultural attainments *in their own tongue* are at least equal to those of the native-born neighbors around them.

In this connection a story may well be told of an immigrant child, a little girl of nine, who brought to her teacher her excuse for absence which had obviously been written by herself, though she had tried to disguise her handwriting and had signed her mother's name. The teacher, with an appalling lack of tact, bullied the child into telling her why she had done this, whereas the reason should have been easy to guess—the mother could not write English and the child was trying to conceal the fact. Still following the tactless line, the teacher later remarked to a friend: "Isn't it dreadful that Mrs. ——— is illiterate! They really seemed to be such nice people." A little later the teacher made her duty call at the foreign home. Conversing with Mrs. ——— through the little girl she discovered that, in her own country, the woman had held a teaching position considerably more advanced than her own.

Therein lies the pity. With this experience as a background, this woman, if she had possessed a knowledge of English, could have become an invaluable asset to the life of the little town, giving to her neighbors the benefit of a culture quite different from their own, making their lives richer, even as she enriched her own. Instead of this she was an "ignorant" foreigner, shunned and pitied when she should have been respected and admired.

The Beginning.

The teaching of English to the foreign-born could not be conducted successfully unless it were looked upon as an important and a necessary activity on the part of the state at large, and up to the time of the creation of the Commission there had been practically no state recognition. Individual cities had taken up the question; some of the cities had gone far in the work and had achieved excellent results. But, beyond this, there did not even seem to be an acknowledgment of the fact that the state had the problem of the immigrant who could not speak English.

In 1913 the Commission, a state agency, was given the responsibility for having certain things done in the line of immigrant education. Specifically, the creating act charged the Commission:

With "bringing to the immigrant the best opportunities for acquiring education and citizenship."

With "ascertaining the necessity and extent to which instruction should be imparted to immigrants."

To "devise methods for the proper instruction of adult and minor aliens in the English language and other subjects."

To "put into operation practical devices for training for citizenship and for encouraging naturalization."

Following its usual method of cooperation and coordination, the Commission immediately made a study of the agencies and organizations which were already equipped for the work at hand but which would need help in planning and developing the new undertaking. The Commission saw that the new task would have to be closely tied up with our schools if permanent results and natural growth were to follow. But the schools, in fact the entire educational system of the state, would have to be modified to meet the needs of the immigrant. To find out how this could best be accomplished and to help in the actual modification became the task of the Commission in this field.

The Home Teacher.

The easiest way to attack the problem of Immigrant Education would have been to enlarge and energize the existing night schools. But, as in all its work, the Commission chose to spend some time at the roots of the question. Its first inquiry was, "Who, among the immigrants, is being reached, be it ever so imperfectly, by our present schools?"

The answer was simple. The children were being taken care of by the regular schools. The father was being looked after, although very unsatisfactorily, by the evening classes. The mother—here was almost a total blank. Not even the most forward-looking cities were giving much thought to the immigrant mother.

Yet the mother had to be considered. Even forgetting her own welfare for the moment, an angle of our statistics of crime among the immigrants points back to the un-Americanized mother. Our records show that the percentage of crime among our foreign-born is comparatively low, but that the percentage of crime among the children of immigrants, the "second generation," is alarmingly high. Somehow this second generation slips.

Anyone who has seen the foreign mother with her American children will catch the answer. The discipline which holds the children steady while they are developing self-control vanishes with the first hint of shame or of superiority which the youngsters feel toward their un-Americanized mother. She can not talk English, she can not help them with their lessons, she wears funny clothes—so why should they stay around her any more than necessary?

It is difficult, under these conditions, for a mother to hold her flock to the strict concepts of obedience and mutual self-respect, of frugality and the love of virtue. Home becomes a dull place for the youngsters, outside attractions call more and more; the mother, frightened, becomes unduly exacting and harsh and is answered with cunning and with subterfuge or with open defiance. This, of course, is not the picture of the average immigrant home. But the reform school, the probation officer, the juvenile court and the jail know in how many homes tragedy ends the dissension between parent and child.

There seemed but one way to remedy this. American influences would have to reach the home, reach the mother, and give her the tools to cope with her American children. The school was the natural agency for this task; moreover, the school which was attended by the children should be the school which would also take in the mother. Clearly, however, the children's teacher could not be the agent for this; the work needed much time and special training.

The conception of the home teacher was the result of the study of this problem, and the Home Teacher Act was made ready for the next legislature and became law in 1915. This law gave to districts in which foreign-born were numerous the privilege of employing special teachers who should work out from the regular school and whose educational work should lie among the immigrant women. Neighborhood classes in English, friendly visits, the work of an interpreter, taking the children to the clinic, being at all times friend, adviser and the disseminator of the best American influences—such is the task of the home teacher.

As soon as the act was passed, the Commission induced a teacher excellently trained and fitted for the work to devote a year and a half to filling the position of home teacher, working out from the various schools of Los Angeles and gathering data "from the immigrants themselves" upon which might be built plans, rules and standards to guide the work of home teachers who should follow. This early experiment has been of inestimable benefit to the state, and many of the principles worked out in this manner are incorporated in the Commission's pamphlet "The Home Teacher," which was published as a concrete help for the task.

Today there are scores of home teachers in California, and the number has increased steadily every year.

Los Angeles Studies and Experiments.

Most of the early studies on the part of the Commission were conducted in Los Angeles, where the way was comparatively easy. The city was already awake to its big responsibility of teaching English to the immigrants and was ready to cooperate with the Commission on every undertaking which offered a step forward in the solution of the problem.

In Los Angeles was made the now well-known study of the cost of the immigrant to the taxpayer, the results of which study are shown here in graphic form. This chart was very widely used in the early campaigns to awaken the state to the need of a definite program and an earnest attitude for the task of immigrant education.

The Crying Need for Teachers.

If the Commission were asked which of its contributions in the field of immigrant education it considers the most vital to the development of the work, it would probably answer: The driving home of the fact that teachers who intend to teach English to foreigners must first be trained for this particular work; and that being a first-rate teacher of American children does not necessarily qualify one to be an acceptable teacher of adult immigrants.

This conclusion came as the result of the Commission's investigation of the night schools in Los Angeles County. The Los Angeles Board of Education, in cooperation with the Commission and every other available agency, had conducted an intensive campaign to increase attendance in evening schools. A fairly good *first night attendance* was obtained. But this at once began to dwindle and, after sixty nights, less than one out of every ten pupils present on the first night still attended school.

A careful study of the methods used by teachers who held their pupils, a no less careful study of the methods used in classes which melted away, numerous interviews with the immigrants themselves, a close analysis of the textbooks used; all this led to the absolute conviction that the fault of the average night school lay in the teacher, who was trying to hold and help adult foreign-born with exactly the same methods, and often with the same books, which she employed with American children. And the effort was proving a dismal failure.

WHAT OUR NEGLECT OF THE IMMIGRANT COSTS.

The result of a study in Los Angeles in 1915.

NOTE.—The striking feature of this chart is the fact that while \$1,271,575.13 is spent in the remedial fields of crime, sickness, poverty and unemployment, only \$38,983.14 is spent in the constructive field of education.

The first result of this study was the evolving of some fundamental rules for correct instruction, which are to be found in the Commission's pamphlet, "A Discussion of Methods of Teaching English to Adult Foreigners." It might be mentioned here that today, with a State Director of Immigrant Education giving her entire time to the task, with successful evening schools springing up on every hand, those fundamental rules still form the basis for the methods of immigrant instruction throughout the state.

The next step in the development of immigrant education in Los Angeles was the offering of normal school instruction in methods of teaching English to foreigners, the first class of its kind in California. Soon after this came the appointment of a Supervisor of Immigrant Education in the Los Angeles schools. Both of these steps had long been urged by the Commission, but they became realities at this time because at this time Los Angeles had at the head of its educational system a man of unusual vision and one who saw the problem of the foreign-born in its true light.

A schoolhouse in which classes for foreign-born were held. It was a quarter of a mile from the foreign settlement and in spite of all efforts the classrooms remained absolutely empty.

A teacher who believed in bringing the school to the people moved the classroom to this shack which stood in the very heart of the little foreign settlement. No windows, no doors, no electric lights.

Classes for Women—Bringing the School to the People.

Having been instrumental in formulating the Home Teacher Law, the Commission now went about the task of putting the education of foreign-born women upon a firmer foundation. This could be done only by conducting an experiment which would show not only the need for instruction but also the possibility of getting results and really advancing the knowledge of English among the pupils.

With this in view the Commission, in 1917, in cooperation with the normal school, the school board and the Y. W. C. A., undertook a truly thrilling task which is described in its booklet, "A Summer Experiment in the Americanization of Foreign-born Women."

The Commission had always held that the people should not be forced to go to the school, but that the school should go to the people. This, the foundation of the Home Teacher Law, was also the basis of the "Summer Experiment."

A flashlight photograph of the class which filled the little shack every evening. Soon two teachers were needed. The students are Italians and Belgians, and they made wonderful progress in learning English.

Classes were held at the time of day most convenient to the women, and in places easily accessible. Classes were held in railroad camps, in factories; a class was held in an abandoned street car and another out under the trees.

Teachers were selected from normal students. And the success of the undertaking, especially when one considers its newness, was very marked. The following summer saw the work continued on a larger scale, this time under the city board of education, where it rightfully belonged, and carried on as field work in connection with a course in immigrant education given as part of the University of California summer session.

During this second summer came an experience which justified to the fullest extent the Commission's idea in taking the school to the people. This story, in photographs, is told on pages 92 and 93, and there is no need of enlarging upon it.

Sometimes the Home Teacher finds an easy way of combining the teaching of English with instruction in better methods of doing household work.

The solution of the problem of the mother who can not leave her children at home while she goes to class. Indoors a class in English is going on. Outside, an assistant teacher amuses the children and gives instruction in the newest methods of quilting.

Widening the Field.

After the Los Angeles experiments came work in some of the other cities of the State. Fresno was visited in the winter of 1917-1918 and a general survey of the immigrant sections was made with particular reference to the educational possibilities and requirements. The story of this survey is told in the "Report on Fresno's Immigration Problem."

A normal course giving instruction to teachers interested in immigrant education was held in Oakland under the supervision of the Commission in 1918.

In the same year the Commission was called upon to help with the organizing of classes in English for the foreign-born soldiers in Camp Kearney.

Helping the State to Realize the Problem.

The years 1918-1920 were spent in convincing the state as a whole of the importance of giving means of education to our immigrants now within the boundaries of California. Several trained speakers with a wide knowledge of the subject gave the message of the Commission wherever their attendance was requested—the necessity for adopting toward our foreign-born a sane and broad-minded attitude and the need for placing their education on the same basis as the other branches of our learning.

The aid of various social agencies was enlisted in this campaign and the press gave generous space to accounts of the various talks. The Commission was assisted, on every hand, by the State Federation of Women's Clubs, which organization had been, from the start, one of the Commission's strongest allies in this work.

A New Department Under the State Board of Education.

In the fall of 1920, the Commission laid before the State Superintendent of Public Instruction its plan for Immigrant Education and suggested that a special department under the State Board of Education be created for carrying on the work which had now gone beyond the experimental stage.

The State Superintendent, who had just assumed the position and was keenly conscious of the shortcomings of his department in the field of Immigrant Education, approved the suggestion. It then became the question of funds and a suitable person to take charge of this new department, and it was agreed that the Commission's Director of Immigrant Education be transferred to the State Board of Education as director of the work. Until the next session of the legislature increased the Board of Education appropriation, the Commission carried the expense.

The Commission was well satisfied with the outcome. The director in question was a woman who had been in the work from the start, who herself had supervised many of the investigations and surveys which had been conducted to study the problem, and it was felt that under her supervision and the influence of the State Superintendent the new department would develop along sane, practical and broadly humanitarian lines.

To organize the State for the serious task of educating its foreign-born was a big undertaking, yet the director found her work much simplified by the fact that she was following paths already blazed; and

this blazing had been done largely by herself under the supervision of the Commission. It remained now to put into actual operation the plans which the Commission had developed and tested by actual experiments and with which many of the communities were already thoroughly familiar. The work had been gathering momentum for many years; now, backed by the State Board of Education and developing under the wise direction of the State Superintendent of Public Instruction, it went forward at a rapid pace.

The Nature of the Work.

In country districts the Director of Immigrant Education works first with the county superintendent of schools. Together they attack the problem of how best to reach the foreign-born population of the county. The way here lies through high school principals, since, under the law, Immigrant Education is a part of the high school program. But high schools are permitted to organize classes in outlying elementary schools, and this agrees well with the Commission's original conception of bringing the school to the people.

The high school appoints a director of immigrant education for the district, and it is the task of this director to organize classes, to employ assistants and to *write lessons*. A word must be said about this last duty. The first Los Angeles survey, held many years ago, brought out the inadequacy of the ordinary lessons which were being offered to the foreign-born, and later observations but deepened this opinion.

The immigrants come to school with a purpose and that purpose is to acquire a vocabulary which will help them, not in the distant future, but today, tomorrow and the next week. This vocabulary, therefore, must needs differ with each locality, depending largely upon the occupations in which the immigrants are engaged.

As part of the planning with school authorities comes the urging of the employment of home teachers wherever the need is present. This branch of the work is also rapidly growing throughout the state.

The second part of the director's task consists in suggesting the teachers for the new immigrant classes which are being continually formed, for the Commission's early cry of "specially trained teachers for immigrant education" is one of the fundamentals of the new scheme. In order to be able to do this, the director must keep in close touch with the several teachers' training centers of the State and must work for new normal classes. When the teacher is on the job, her training continues, for short institutes are being constantly held in localities where immigrant classes are found, and these institutes are under the supervision of an itinerant educator employed by the University of California and working closely with the State director.

The third part of the work lies with the non-English speaking children. Here also the training of teachers must be supervised and new methods devised for an easier start toward good citizenship on the part of children who do not bring a knowledge of our language to the school.

The new Department of Immigrant Education has been in existence for two years. When it began its work in 1920 there were classes for foreign-born in 35 districts. The following year the number was 77.

In 1922 the number had become 140.

Sidelights on the way in which various districts handle their work are interesting in the extreme. One small but scattered high school district

has eight classes for immigrant women, all rather far from each other. Here the teacher in charge is equipped with a Ford and has become a true itinerant instructor. In another widely scattered district the principal takes the teachers to their evening classes in his car and, himself, takes the class farthest out, a distance of thirty miles from his home. In one community the principal was not enthusiastic about Immigrant Education and in spite of the energy on the part of the teacher the class was given no encouragement, in fact it was not permitted to meet in the school. Thoroughly discouraged, the teacher agreed to discontinue the work. Whereupon the community, native-born and foreign-born alike, rose in unanimous protest. The class remained, but the principal soon had to search other employment.

The New Experiment.

Cooperating with the State Board of Education, the Commission is now fostering an experiment in the education of children who do not speak English which will probably develop into a movement even more important than the teaching of adult immigrants.

Thoughtful educators have long felt that the teaching methods which produced results when applied to native-born children of American parents failed to reach the children of some of our foreign-born, notably the Mexicans.

Mexican children were leaving school very early in life and the reason was not wholly the attitude of the parents. The children simply were not interested.

Through observation of the studies which these children did like and the methods of teaching which did hold them, and through the thoughtful study of their home life, there was evolved a new scheme of instruction which is now being tried in several California schools in which most of the pupils are Mexicans.

The experiment is very new, scarcely begun, in fact. But it is felt that its results will bring a rich contribution to the educational development of the State and of the nation.

In the light of these, and many similar reports, the Commission feels that its years of uphill work, in creating an interest in place of general indifference and in working out concrete methods which might be used when the indifference passed, have been well spent. Rightly directed from the start, rightly fostered and developed now, the work is gaining momentum with every passing day, and the State should feel a deep satisfaction in its policy in this field.

Here, again, the person carrying on this experiment, though paid out of the funds of the Commission of Immigration and Housing, is actually attached to the staff of the Superintendent of Public Instruction—another instance of the close cooperation existing between the Commission and the State Board of Education. The pioneering work is done by the Commission or at its expense; then when it has been proven that the work is worth while, and when the most approved methods have been worked out, it is entirely probable that the State Board will take over the entire enterprise.

FOREIGN LANGUAGE SPEAKERS.

To know the work of the Commission's foreign language speakers at its best one would have had to follow them about the state from foreign settlement to foreign settlement, during the trying months of the war. It would then become clear why, *during the entire war period, there was hardly a labor disturbance in the State of California which assumed the proportions of a strike.*

The Commission has always held that, although the learning of English is the most important step in the assimilation of the immigrant, the need for making America known to him is greatest when that English language is still a blank to him. For it is while the immigrant can neither speak nor understand, that he is most likely to be troubled and confused by real and imaginary difficulties; and the mental state of worry thus created is not a wholesome one either for himself or for his community. This is precisely what the foreign language speakers remedy and prevent by bringing to the immigrant the message of America *in the immigrant's own tongue* while the language of America is still unknown to him.

Nor are their talks vague and indefinite. During the war the list of subjects to be discussed was a particularly long one and each subject covered a burning issue. The rising cost of living, the draft, our reason for being in the war, War Savings Stamps, Liberty Bonds, the Red Cross, the need of increased production creating the need for staying on the job—these were some of the more obvious topics of which the Commission's agents spoke, though an additional topic was nearly always furnished by some local condition which had been the cause of the agent's coming. And men who had been troubled because they had heard, all about them, the stirring of a new order of things which they could not understand, and whose chief source of information—or misinformation—was often the professional agitator who found rich soil for his seeds of distrust and disloyalty; these men were kept sane and working because the perplexing problems were made clear to them by the State in which they lived.

These foreign language speakers were sent to those communities where aliens lived in large numbers; and the particular nature of their work varied with the immediate needs at hand. Sometimes a company employing immigrants called its men together to hear the talk; sometimes the agents preferred to approach the matter in a different way, going about quietly among the men and learning just what information they needed most before gathering them together for an informal talk.

For example: A bad situation developed in 1918 among the employees of one of the big lumber companies of the State. Most of these employees were Slavonians of Austrian birth and, like their compatriots throughout America, were in an odd position. They were against Germany but they were not against Austria and, worst of all, they were not *for* any country in particular. Utterly indifferent to

Liberty Bonds and Red Cross donations, they were objects of suspicion to all about them; and this attitude, in turn, aroused their antagonism and drew them closely together into a sullen, defiant band.

In reality these men were merely confused and hurt. They had lived long in the woods, and America was a country they did not know. No one had tried to make clear to them the issues involved in the war; no one had tried to make clear to them their duties to their new country; and then, suddenly, they found themselves outcasts in that country. The atmosphere of the little lumber town was becoming decidedly ugly.

A labor agitator came to town, and another. Someone, alarmed, sent out a "tip" and two deputy marshalls arrived armed with search-warrants. And suddenly the entire Slavonian colony was on the verge of an outbreak.

It was then that one of the Commission's foreign language speakers slipped quietly into town. He was a man who spoke Slavonian perfectly and knew the peoples of Southern Europe, and, having worked as inspector of labor camps under the Commission, he knew the men about him, knew their troubles and their difficulties.

For three days he mingled with them and listened to their chatter. On the third evening he called the Slavonians together, introduced himself, and talked to them for a time in their own tongue.

He did not appeal to exaggerated sentiments of patriotism. He asked them merely to use their common sense in deciding what was right and what was of advantage to themselves, to America, and to the great cause now being fought.

His arguments were simple. The state was doing what it could to help them. In return it was only fair that they become loyal inhabitants of the State.

America was fighting for democracy. They, the Slavonians of Austria, had come to America in search of that democracy. Therefore it was fair and just that they help America in that fight. They had not been taken into the army. Therefore they should turn the more readily to the tasks at home.

Their first task was to stay on their job. If they moved from place to place, if they stirred others to move, America's home work could not go on efficiently and they themselves would suffer in the end.

Liberty Bonds had been offered them, and they had not bought. Yet by lending their money to the government they were not only helping in the crisis, but they were advancing their own interests as well.

As for the Red Cross, the war could not go on without it and the after-war years would need its help no less. Men, women, children, all over the United States, were giving their last pennies to help it, yet they had not given.

In conclusion—the time had come for every foreign-born to make his decision. The man between two countries was a man without a country. The choice was theirs to make!

He himself would return on the following evening and speak again. If they cared to come back and bring their friends he would be glad.

The feelings of the Slavonians were made plain when, next evening,

they crowded the hall. The feeling of their employers is made no less clear in the following letter received at once by the Commission:

Your Mr. Scar, who recently visited us, has doubtless reported to you conditions as he found them here and has given you some idea of what he has accomplished. In my capacity as lawyer I represent the principal industry here and I want to say that prior to Mr. Scar's visit we had been considerably worried by the attitude of the Austrians toward our Government in this present war. We feel that your representative came at the right time, and that he accomplished more practical good than any representative of the Government who preceded him. We believe that the sentiment of the Austrians has changed, and we think it no more than his due that we should make known to you the able and efficient manner in which he handled the situation. For a time matters looked rather critical, but he was equal to the situation.

We have a large number of Austrians employed in the woods about ten miles from here, where they have an assembly hall and can be gathered together on proper occasions, and we are of the opinion that if it could be arranged for Mr. Scar to come here again soon it would be a good idea to have him speak to these men, and feel that his help in solving the Austrian situation is just as much needed in the woods as it is elsewhere. If you can arrange to have him come to us and give us a week's notice of the time when he will be able to speak, we will make all necessary arrangements.

Again commending the work of your representative and your department on the manner in which the situation here was handled, we beg to remain, etc.

One item the letter did not mention. After the second talk by the Commission's agent there had been a party. It was given for the agent and it ended with liberal donations for the Red Cross—the first money these men had ever given to a good cause in America.

Another sidelight on the work is given by a telegram from a large fruit company which was interested in preserving a friendly feeling among the Mexicans who comprised most of the laboring force from which the community drew its work crews. The agent mentioned in this telegram had been delegated to work among all Spanish-speaking people of the State, and his task was an enormous one. The telegram follows:

Your agent is doing very good work here and is bettering our relations with the Spanish element. We would appreciate it very much if he could be here for a part of our fruit season. We think it would help conditions throughout the state as our Spaniards work as far south as Fresno and will carry the friendly sentiment that he instills in them into other fields.

For many months two and sometimes three men were kept on this job of explaining, and were able to cover all the important foreign settlements in the state.

After the war, lack of sufficient funds has not only prevented the growth of this branch of the work but has made contraction necessary. Occasionally, however, there comes the urgent need from a remote district to make some vital matter clear to a group of foreign-born or to calm a troubled community, and the Commission is always quick to respond.

The Jackson Mine Disaster.

Such a need came recently, in the fall of 1922, during the fire at the Argonaut Mine in Jackson. The mining population there is largely foreign-born, and the dreadful uncertainty during the days of rescue work weighed even more heavily upon the families and friends of the

entombed miners because of their inability to understand readily all that was being said to them in explanation. Sinister grumblings began to be heard—"The mining inspector's fault." "The fault of the shift boss." "The fault of the operating inspector."

An agent of the Commission who spoke Slavonian and Italian, the two nationalities principally involved, was immediately sent to the mine.

At once he fell into his accustomed ways, mingling unobtrusively with the men and women, giving a cheering word there, a bit of calm advice elsewhere, stopping to gossip with street-corner groups, dropping into the drinking places. As usual, he was trying to locate the agitators, either the professional type or the unthinking, too free-speaking members of the community itself; and found both types. The representatives of the former type found they could accomplish nothing after his arrival, and left. Of the latter type, he found one who was going from house to house spreading distrust everywhere, laying the burden of responsibility upon the operators, urging the wives and families of the entombed miners not to accept the men's pay checks, warning against accepting money from the compensation fund, leaving chaos wherever he went.

Having singled him out, it required but a few minutes of the Commission's agent's time to convert him to the idea that silence and discretion should be his in the future. After that, the agent's task was to undo the work of the other as much as possible, to visit where the other had visited, to calm and explain where the other had aroused and confused. The mutterings died down, almost at once the atmosphere changed and lost its tenseness. The Commission's files hold letters of high commendation and appreciation both from the mine management and from the State Industrial Accident Commission.

These are but two of the innumerable experiences which have fallen to the Commission's foreign language speakers, but perhaps they are sufficient to indicate the method of attacking the problem.

The Commission feels that the need for such work is a vital one and that it should be going on all the time so that proper understanding, so vital to proper cooperation, might be established between the foreign-born and the State of California.

DISTRIBUTION OF IMMIGRANTS—THE LAND QUESTION.

In the Commission's report of 1920 occurs the following paragraph under the heading—"Scatter the Immigrants":

The plan of scattering the immigrants has often been offered as a panacea for all problems of immigration. The study of the question, however, has revealed the fact that distribution from behind does no good. The only acceptable kind of distribution is through making a given place so attractive that a man has to come there. "If you would have him go to the farm, you must make the farm more attractive to him and to his children." This statement coming from an immigrant was not idly made.

On this problem of sane and rational distribution, the Commission has spent much time. In a measure, three of its departments—housing, labor camp inspection and immigrant education—have been contributing to the willingness of men to go out into sparsely inhabited sections, for better housing has reached even the small cities; the improved labor camps have made comfort possible while working in remote localities, and, under the present system of immigrant education, even the country districts offer means for practical mastery of the English language. The Commission's Bureau of Complaints has also made its contribution by bringing about legislation which has made land fraud a much more difficult thing to "put over." But much more is needed if our foreign-born or, indeed, our native-born as well, are to find suitable land for their farms and find contentment when these farms are theirs.

Realizing this, the Commission, very early in its work, tried to interest institutions which are best qualified for the task to cooperate with it in the dissemination of thorough, exact and up-to-date information on lands in California from all angles which would interest a prospective owner. Although several beginnings were made, no permanent bureau of practical information has been established.

In 1919, working independently, the Commission made a thorough investigation of the land situation in a large section of the State and the result of these investigations is contained in its pamphlet, "Large Landholdings in Southern California."

This report gives the location and extent of tillable tracts and discusses the prices and the values of land in different localities. The question of the large landholdings is considered in the light of one of the big difficulties in the way of prospective landowners, and the Commission here urges on the part of the State a constructive policy which will have for its aim the steady breaking up of these large holdings, thus permitting them to become a factor in the development of the state. The last ten pages of the report are devoted to a consideration of possible means to this end.

A summary of the findings of fact, or of reasonable approximation, is as follows:

1. That in the eight counties of southern California there are 279 holdings (reducible by allowing for duplications to about 255 holdings). each of more than 2000 acres, comprising an aggregate of 4,893,915 acres.

2. That the Southern Pacific grant lands and "lieu lands" in five of these counties (there are none in the other three counties) aggregate 2,598,775 acres.

3. That of the total of nonrailroad and nonpublic rural lands in these counties, roughly approximated by the federal census figures of "land in farms" (4,587,581 acres), 2,295,140 acres or 50 per cent, are owned in about 250 holdings.

4. That apart from the railroad lands, there are at least 32 holdings each of more than 15,000 acres; that seven of these holdings exceed 50,000 acres each; that one of them is of 101,000 acres and another of 183,399 acres.

5. That of the 2,295,140 acres mentioned above, at least 666,886 acres or 29 per cent, are now or potentially tillable.

6. That a considerable part of this tillable land lies idle; that another considerable part of it is not devoted to its most beneficial use; that though there are many thousands of persons eager to get access to this land, much of it is not for sale under any circumstances, and that such portions as are for sale are held under prices usually beyond the productive value and on terms of payment which mean great hazard or ruin to the purchaser.

Some remedial suggestions follow. They include the extension on a large scale of the plan of the Land Settlement Board. But they lay the greatest emphasis on the need of making large landholdings unprofitable, and to this end the recommendation is made of a graduated land value tax.

For the guidance of the foreign-born who are interested in the purchase of land, the Commission offers its services in investigating the desirability of any tract the purchase of which they might be contemplating. This investigation includes the agricultural possibilities of the land, conditions surrounding the marketing of crops and general desirability of settling in the particular locality.

The question of the distribution of immigrants is an important one, but it is also most delicate. The approach to it must necessarily lie through making rural life more attractive and through making the immigrant less dependent upon his fellow countrymen and sufficiently self reliant to go out into new and sparsely populated sections with the chances for success in his favor.

UNEMPLOYMENT.

The problem of unemployment, especially in the winter months, has always been a very serious one for California. It is especially aggravated by the fact that, with the coming of cooler weather, thousands of jobless men drift in from other states, attracted by California's milder climate and the ease of obtaining food which is naturally associated with a rich State.

Realizing that this situation was causing a constant drain upon the State and was, also, a source of constant menace to the peace of our communities, Governor Johnson, early in 1914, requested the Commission of Immigration and Housing to study the question of unemployment and to offer definite suggestion for a sane and rational solution of this very grave problem.

The Commission of Immigration and Housing was particularly well equipped to handle this investigation. In its broad studies and investigations of the problems of immigrants, it had recognized unemployment as one of the greatest of the difficulties in the way of the natural progress of the foreign-born. Also, the fact that a newly arrived immigrant is, necessarily, one of the unemployed until he obtains his first position, has made it imperative for the Commission to study the employment agencies as well as other avenues for bringing together the laborer and the job. These studies were begun even before the Commission had formally opened its offices, and a new light was thrown upon the situation a little later, when the Bureau of Complaints began to function and the stories of unemployment, of fraud on the part of these employment agencies and the difficulties surrounding the landing of a job began to come in "from the immigrants themselves."

A large part of the work necessary for complying with the governor's request had, therefore, already been done. The eleven months which elapsed between the request and the submitting of the report which embodied the Commission's findings were devoted to intensive study of the question from the following angles:

1. A consideration of suggestions embodied in the many letters on the subject of unemployment from interested and informed persons.

2. A thorough study of the best books, reports and articles on the subject—covering experiences both in the United States and in Europe.

3. An intensive investigation of conditions in California. This investigation was carried on in cooperation with the United States Commission on Industrial Relations and covered the following points: (a) Study of special localities to show methods of obtaining labor; (b) Study of several hundred life histories of migratory and casual workers to learn causes of unemployment and methods of obtaining jobs; (c) Study of available material in United States Census, report of United States Immigration Commission, report of State Commissioner of Labor Statistics, reports of labor unions in California; (d) Investigation of eighty-one private employment agencies within the state to determine their real status and value.

The report which embodied the results of this three-fold investigation was thorough and comprehensive. This report was printed under date of December 9, 1914. A well-known social worker speaks of this report (and of three other publications of the Commission) as "the most progressive documents on migratory labor that I have ever found."

The major part of this report deals with means for the ultimate elimination of unemployment through a relatively slight readjustment of the machinery of the state. Chief among the Commission's recommendations in this line are the following:

1. The creation of a state central employment bureau under a governing board composed of representatives of labor, employers and the general public. This bureau would establish branch offices throughout the state which would function as free employment agencies. It would also supervise and regulate private and philanthropic agencies and would have the power to issue and revoke licenses.

This recommendation came as the result of the study of the eighty-one private employment agencies mentioned above. When it was found that sixty-four per cent of these agencies were of doubtful honesty, sixty-four per cent of doubtful efficiency, and that misrepresentation, illegal retention of fees, false advertising of jobs and countless other abuses were admittedly a part of the employment agency game, the need for regulation and supervision become imperative. Though a still more vital reason for the creation of this central bureau was the fact that such a bureau would have a knowledge of the labor situation in the *entire* state, a knowledge which would prevent a man in Los Angeles from remaining idle when there was a job for him in Fresno. This is a service which a local employment agency, working independently, can not perform.

In addition, this central bureau would be in a position to issue warnings, during slack periods, to men in other states, making clear that California could not absorb any more labor.

Unemployment insurance in some form would probably result from the establishment of such central bureau. It is futile to speak of unemployment insurance when a great part of unemployment is not a lack of jobs but the inability of the man to find the job.

The suggestion outlined in the above recommendation was adopted by the legislature, though in a somewhat modified form.

2. Further encouragement of the development of labor camp sanitation and of housing throughout the state.

This recommendation came as the result of the conviction that sickness is very often the beginning of unemployment. A man's vitality becomes lowered, his work record drops, he is laid off and his troubles begin. Or, in case of acute illness, he leaves his job for a time and, upon returning, often finds the gap filled by another man.

Sickness is very often the result of improper housing. To speed up improvement of labor camps in the rural districts and of housing in cities, the Commission, in this report, urged additional appropriation on the part of the state as a far-sighted policy toward the doing away with unemployment.

3. Developing the work of education and vocational guidance.

The connection between unemployment and lack of training is obvious. Here the Commission urged at least part-time education for children from fourteen to twenty-one, a thorough development of vocational guidance and the education of adult foreign-born.

4. Improving rural conditions, thus making the "back to the land" movement a natural one.

Through this, farming would receive an impetus and thousands of men would find employment even as the state as a whole would receive large benefits from new farming developments. Toward this end the Commission urged the founding of a State Land Bureau which could give out authentic information on lands.

5. Enabling the Commission of Immigration and Housing to enlarge the scope of its work.

It was pointed out that, through its various departments, the Commission of Immigration and Housing was already working for the elimination of unemployment and had accomplished much in this field. Enlarging the scope of its work was therefore necessary.

These, in brief, were the principal suggestions embodied in the report. Obviously, the processes necessary to a fundamental solution of the problem, as outlined here, could not take place overnight even under the most favorable conditions. Yet the Commission realized that there was need for immediate steps for the alleviation of the evils of unemployment already about us, steps which could be taken while the machinery for the ultimate solution was being set in motion.

A separate set of recommendations was therefore drawn up and the Commission urged that they be put into effect at once, for the winter of 1914-1915, under the supervision of some competent committee. These immediate recommendations, briefly, were as follows:

1. Preventing cities of California from driving out their unemployed as well as the migratory laborers who drifted in. This step would prevent the forming of roving "armies," and would make it necessary for each city to care for the unemployed within its limits.

2. Insisting that giving work, not charity, be the policy of the cities, so that the influx of applicants from other states might be avoided.

3. Adopting a uniform plan for action on the part of cities and counties with regard to supplying work such as clean-up of city, sewer work, highway construction, etc., establishing municipal lodging houses, impressing upon Associated Charities the need for continuing caring for resident destitute, and enlisting cooperation of other charitable institutions.

Immediately upon receiving this report, Governor Johnson approved these recommendations and placed the measures for immediate relief into the hands of the Commission of Immigration and Housing.

The work of the Commission in this new undertaking is described in its "Report on Relief of Destitute Unemployed," submitted in June of 1915.

Upon receiving its appointment to the task, the Commission immediately started to organize the state, as there was no time to lose. Practically without exception it met whole-hearted cooperation on the part of the cities concerned. In the one exception, the county took matters into its own hands and partially filled the gap.

The work was planned in great hurry, there was little time for deliberation or even for organization. Yet the benefits derived from the efforts were very great. Quoting from the report in question we find that:

More than 100,000 persons have directly or indirectly shared in the efforts made in their behalf by a comprehending and generous group of cities and counties.

By receiving work at a time when their resources were exhausted thousands of worthy men have been spared the ignominy of accepting charity.

Not the least valuable of the benefits derived from the winter's work is the prevalent feeling generated among the unemployed that, as they frequently expressed it, "The cities are playing fair."

Notwithstanding the acute and widespread economic distress and the presence in our state of the largest number of unemployed in its history, California, during the winter months just past, has been notably free from the disorder so prevalent in the state during the previous winter and so apparent in other sections of the country during the past winter. This propitious condition was partially the result of the sane, prompt and generous manner with which the various public and private organizations have responded to the timely appeals made by the Commission for unity of action in meeting the impending crisis.

Not merely has crime been reduced, relief afforded and physical suffering minimized, but allegiance of the better element of the unemployed in constructive efforts to improve conditions has been secured.

The enthusiastic approval of this plan by the cities which had tried it was evident from the many letters which were sent to the Commission at the end of the season, and from the much more important fact that, in California, the custom of driving out the unemployed floating population seems to have vanished with this experiment.

It is particularly worthy of note that one of the cities, Alameda, at once planned to secure means whereby this work with the unemployed would become a permanent branch of its municipal machinery.

Now, after seven more years have passed in work among the foreign-born, the Commission feels even more definitely that every available means should be used for the elimination of the great evil of unemployment, and that this elimination will come as the result of measures outlined in its report of 1914.

AMERICANIZATION VS. "AMERICANIZATION."

The war brought home to America as a whole the realization that America had not been doing her full duty by the foreign-born who had come to its shores, and that, in consequence, these foreign-born had failed to become assimilated, and were, for the most part, very far from the goal of good citizenship in their new home.

This realization gave rise to a sudden wave of "Americanization" which, for a time, shared honors with the war itself in the time, energy and news space devoted to it throughout the country. Everywhere there seemed to be not only the desire to "Americanize" every existing immigrant overnight, but also the firm conviction that this could be easily accomplished.

All sections of the country organized themselves for the task. In California the State Commission of Immigration and Housing was chosen as the Americanization committee of the state, and entrusted with the duty of organizing the various communities for the big undertaking.

The Commission accepted its new responsibility in all earnestness, ready, as always, to give a fair trial to any experiment actuated by a worthy motive. But, after a very short time, the Commission learned "from the immigrants themselves" that the new idea, even when shorn of its really objectionable features and modified in the light of the Commission's experience with the foreign-born, could not produce the results which were expected of it. In fact, adherence to the policy of "Americanization" as popularly conceived could end only in further bewilderment and dissatisfaction on the part of all concerned, and especially of the immigrants whom it was expected to benefit most.

The mistake on the part of those who fostered this nation-wide movement came in thinking that the organizing of a community for Americanization could be done in a manner similar to the organizing of a community for a Red Cross drive. The extreme intricacy and delicacy of the former problem was completely overlooked.

Community organization, the bringing together of all its parts, foreign-born and native-born, is an excellent thing in itself and is conducive to the promotion of the best ideals of citizenship. But it can come only as the result of the right attitude *within* the community, an attitude made up of mutual friendliness, understanding and the spirit of cooperation between the foreign-born and the native-born, an attitude which was developed naturally and steadily over a long period of time. And a *sine qua non* of this attitude is the feeling of "at homeness" on the part of the foreign-born—the sense of self-reliance, of independence and of standing shoulder to shoulder with their native-born neighbors.

The trouble with the proponents of "Americanization" was simply this—they tried to *hand down* from the *top* something which should have *grown up* from the *bottom*. Whereas, the true Americanization concerns itself with aiding this growing up and the very first step is helping the immigrant to achieve self reliance.

The State of California discovered the way to this true Americanization nine years ago, before the nation as a whole had given much thought to the matter, and, having discovered it, it organized its Commission of Immigration and Housing and charged it with the task of

putting the new conceptions into effect. Since then the process of Americanization, based upon firm and rational foundations, has been going on steadily within the state through the regular work of the Commission's several departments.

When arguments were being brought together to support the formation of the proposed Commission of Immigration and Housing, an article, "The State and the Immigrant" received considerable publicity as embodying some of the conceptions upon which the Commission was being planned. It is here reproduced to throw additional light on California's conception of Americanization.

THE STATE AND THE IMMIGRANT.

A question, which more than once we have had to answer, runs something like this: "Why should the state devote special attention to the immigrant, Haven't we our own poor, our own exploited among the native born? And aren't they just as worthy of protection and assistance as the alien? In fact, doesn't our first duty demand that we serve our own? Should not charity begin at home?"

Our state may justify itself from at least three different viewpoints. The act creating the Commission does not intend that any special favor be accorded the foreigner. But the stranger, ignorant of our laws, our customs, and often of our language, upon arrival finds himself beset by innumerable handicaps. The removal of these tends to place him upon an equality with those longer resident here. There is no favoritism in this; merely an attempt to establish a measure of justice.

Ordinarily, the immigrant is so situated that he becomes an easy prey to exploiters, that he finds it almost impossible to get on his feet economically; misfortune drags him into the overcrowded quarters of our slums, those breeding places of disease, immorality, crime and ignorance; education in English and in civics is almost impossible to attain. Such a man is not on the road to becoming a useful citizen. Indeed, unguided and unprotected, he is liable to become a menace. The correction of these evils is no more than a matter of our own self-protection. Our efforts primarily are in the direction of our own welfare. From this viewpoint, the immigrant is only an incident in our activities.

But the immigrant is not merely a potential menace from whom we must protect ourselves. With the proper encouragement, he may become a positive source of benefit to our civilization. Each man brings to our shores certain inherited racial and national talents as well as certain personal faculties which we may encourage and develop to our own advantage. The social settlement was the first institution in this land to give practical recognition to the fact that art and philosophy had not departed from the Greek, that music and the sense of legal order had not deserted the Italian, that with the Jew there still remains a worship of the beauty of holiness, a reverence for pure family life, and a deep-seated belief that a nation which breaks faith is as much a sinner as is the individual who does violence to the moral law. The settlement first recognized the valuable contributions that might be made to our culture by immigrants from Germany, from Russia, from England, from France and from the homes of the Norsemen; yes, even from the pettiest of distant lands, And advisedly we may take the cue from the settlement in this respect, to do all within our power to bring out the latent possibilities from even the humblest of the strangers within our gates. Our country, in its early history, borrowed ideals and practices from all peoples, both ancient and modern. Is it not conceivable that the descendants of those who contributed this might still have something to give?

The state, then, in directing some attention toward the immigrant, is justified in three ways: First, by removing handicaps in the path of the stranger, it tends to

place all upon an equality of opportunity; then, by protecting and aiding the foreigner, it most wisely seeks the welfare of the whole commonwealth; and finally, in encouraging the development of racial and personal talents, the state brings out valuable contributions to our culture.

The matter of supreme importance is not what we do at the gates, but what we do after the immigrant is admitted. The vital thing is not a policy of admission and exclusion, but a domestic immigration policy, whether we open wide the gates or keep them tightly closed.

First, for our own security, if not for his, we must protect the foreigner from abuse and exploitation. Then we must remove friction from the path leading to economic settlement. The effort of the national department of labor to organize and coordinate the work of public employment offices is an attempt in this direction. Agricultural cooperation and rural credits would help. Then we must make more common the opportunities to acquire a knowledge of English and the rudiments of civics. What sometimes seems to be most important of all is the establishment and maintenance of proper standards of health, sanitation, housing, education, labor and justice.

With wise minimum social, economic, educational and legal standards determined and enforced, we make impossible the existence of many of those practices and habits which are repugnant to our civilization. The immigrant crowds into hovels, thus endangering our health and our economic structure. Well, enforce our five hundred cubic feet law and other housing regulations, and he must be halfway decent. The alien competes unfairly by throwing his women and his children into the stream of labor. Then bring to bear upon him our compulsory education law and our laws governing the employment of women and minors. The foreigner participates in corrupt politics and overloads our courts. Possibly our taking corruption out of our politics and putting more justice into our courts might remedy much of this.

The protection of the foreign-born from exploitation, the building up of proper standards, and the opening up of economic and educational opportunities are what are involved in the conception—a domestic immigration policy.

ACT CREATING THE COMMISSION OF IMMIGRATION AND HOUSING OF CALIFORNIA.

CHAPTER 318.

An act relating to immigrants and immigration, creating a commission of immigration and housing, providing for the employment by said commission of a secretary, agents and other employees, authorizing said commission to fix their compensation, prescribing the duties of said commission, providing for the investigation by said commission of all things affecting immigrants, and for the care, protection and welfare of immigrants, and making an appropriation for the purpose of carrying out the provisions hereof.

(Approved June 12, 1913: Stats. 1913, p. 608; amended, Stats. 1915, p. 848; Stats. 1917, p. 1514.)

SECTION 1. Within thirty days after this act shall go into effect, the governor of the state shall appoint five suitable persons to act as commissioners of immigration and housing. Said commissioners shall hold office and serve solely at the pleasure of the governor and not otherwise.

SEC. 2. Said commissioners shall serve without compensation, but shall be entitled to receive from the state their actual necessary expenses while traveling on the business of the commission, either within or without the State of California.

SEC. 3. The commission shall be known as the "Commission of Immigration and Housing of California." It shall have a seal for the authentication of its orders and proceedings upon which shall be inscribed the words "Commission of Immigration and Housing—California—Seal." Each member of the commission, before entering upon the duties of his office, shall take the oath of office as prescribed by the Political Code for state officers in general, and must execute an official bond in the sum of five thousand dollars. Within thirty days after appointment, the commission shall meet at the State Capitol and organize, selecting a president, a vice-president and secretary. A majority of the commission shall constitute a quorum for the exercise of the powers or authority conferred upon it. Whenever a vacancy occurs in the commission, from any cause whatsoever, such vacancy shall be filled by the governor, as provided in section one for the original creation of the commission. In case of a vacancy, the remaining members shall exercise all the powers and authority of the commission until such vacancy is filled. The commission shall maintain its headquarters and principal office in the city and county of San Francisco, and may establish branch offices at any place or places which in the judgment of the commission may be deemed advisable. The commission may, however, hold sessions at any place other than its offices when the convenience of the commission and the parties interested so requires.

SEC. 4. For the purpose of carrying out the provisions of this act, the said commission is authorized to employ such expert and other employees as it may deem necessary, and upon such terms and for such compensation as it may deem proper. The said commission shall have power to enter into contracts of employment with such persons as it may desire to employ for a definite period of time; but no contract shall be made for more than one year. The employees of the commission shall be entitled to receive from the state their actual necessary expenses while traveling on the business of the commission, either within or without the State of California.

SEC. 5. The Commission of Immigration and Housing shall have the power to make full inquiry, examination and investigation into the condition, welfare and industrial opportunities of all immigrants arriving and being within the state. The commission shall also gather information as to the agricultural possibilities and opportunities for settlement on land within the state; such information to include soil and agricultural surveys of the arable land within the state and other data relating to the price and productivity of land. The commission shall also have power to collect information with respect to the need and demand for labor by the several agricultural, industrial and other productive activities, including public works, within the state; to gather information with respect to the supply of labor afforded by such immigrants as they shall from time to time arrive or be within the state; to ascertain the occupations for which such immigrants shall be best adapted, and to

bring about intercommunication between them and the several activities requiring labor which will best promote their respective needs; to investigate and determine the genuineness of any application for labor that may be received and the treatment accorded to those for whom employment shall be secured; to cooperate with the state employment bureaus, municipal employment bureaus, and with private employment agencies within the state, and also with the employment and immigration bureaus conducted under the authority of the federal government or by the government of any other state, and with public and philanthropic agencies designed to aid in the distribution and employment of immigrants; and to devise and carry out such other suitable methods as will tend to prevent or relieve congestion and obviate unemployment; and to collect and publish, in English or foreign languages, for distribution among immigrants, in, or embarked for, California, such information as is deemed essential to their protection, distribution, education and welfare, and said commission is hereby empowered and authorized to have printed by the state printer any such reports or information, records or proceedings as it may deem necessary or proper; and if for any reason the state printer is not equipped to do any part of said work, then the said commission shall have the right and the authority to have the same done elsewhere upon such terms and conditions as it may deem proper.

SEC. 6. The commission shall cooperate with the proper authorities and organizations, federal, state, county, municipal and private, with the object in view of bringing to the immigrant the best opportunities for acquiring education and citizenship. To that end it shall procure from, or with the consent of, the federal authorities, complete lists giving the names, ages and destination within the state of all immigrant children of school age, and such other facts as will tend to identify them, and shall forthwith deliver copies of such lists to the superintendent of public instruction or the several boards of education and school boards in the respective localities within the state to which said children shall be destined, to aid in the enforcement of the provisions of the education law relative to the compulsory attendance at school of children of school age. The commission shall further cooperate with the superintendent of public instruction and with the several boards of education in the state to ascertain the necessity for and the extent to which instruction should be imparted to immigrants within the state and to devise methods for the proper instruction of adult and minor aliens in the English language and other subjects; and in respect to the duties and rights of citizenship and the fundamental principles of the American system of government; and shall cooperate with the proper authorities and with private agencies to put into operation practical devices for training for citizenship and for encouraging naturalization. It shall be the aim to communicate this instruction to the immigrant as soon after his arrival as is practicable. The commission shall cooperate with the proper authorities to extend this education for both children and adults to labor camps and other localities from which the regular schools are not easily accessible. The commission in cooperation with the proper authorities and organizations shall encourage the establishment of playgrounds and other recreational activities, and also the establishment of settlements and social centers in cities and towns.

SEC. 7. With the object in view of rendering to the immigrants that protection to which they are entitled, the commission of immigration and housing may inspect all labor camps within the state, and may inspect all employment and contract agencies dealing with immigrants or who secure or negotiate contracts for their employment within the state; may investigate the banking relations that exist between immigrants and laborers; may investigate and inspect institutions established for the temporary shelter and care of immigrants and such philanthropic societies as shall be organized for the purpose of securing employment for or aiding in the distribution of immigrants, and the methods by which they are conducted; and shall investigate housing conditions under which immigrants live, and sanitary and safety conditions under which immigrants are employed; it shall further investigate conditions prevailing at the various places where immigrants are landed within the state and at the several docks, ferries, railway stations, and on trains and boats therein, and shall investigate any and all complaints with respect to frauds, extortion, incompetency and improper practices by notaries public and other public officials; it shall further investigate the relations existing between immigrants and steamship and railway ticket agents, hotel runners, cabmen, baggagemen, interpreters and pawnbrokers; it shall further investigate the dealings carried on between immigrants and real estate firms or corporations; and as the result of any of the above inspections or investigations, if it should find evidences of fraud, crime, extortion, incompetency,

improper practices or exploitation, it shall be the duty of the commission of immigration and housing to present to the proper authorities the evidences for action thereon, and shall bring to bear all the authority within its power to see that justice is rendered. The commission shall also encourage the establishment of legal aid societies.

SEC. 8. With the further object in view of bringing to the immigrant the best protection the state can afford, it shall be the duty of the commission to call to the attention of the proper authorities any violations it may discover of the laws pertaining to the payment of wages, to the mode of paying, pertaining to the child labor laws, the employment of women, factory inspection laws, weekly day of rest laws, protection of labor under building laws, protection of labor under public works laws, laws relating to the white slave traffic, and laws of the state and county and municipal health departments; the tenement house laws, and other laws pertaining to housing conditions. The commission shall investigate and study the general economic, housing and social conditions of immigrants within the state, for the purpose of inducing remedial action by the various agencies of the state possessing requisite jurisdiction; and shall generally, in conjunction with existing public and private agencies, consider and devise means to promote the welfare of the state. The members of the commission of immigration and housing or any of their authorized agents shall have the right to enter into tenement houses, buildings and dwelling places for the purpose of inspecting such houses, buildings, and dwelling places to secure compliance with state tenement and building acts and municipal building ordinances and to prevent violation thereof, and shall have the right to examine the records of the various city departments charged with the enforcement of the tenement house law and other building regulations and to secure from them reports and copies of their records at any time.

SEC. 9. The commission shall have the right to demand of all officials, state, county and municipal, and it shall be the duty of said officials to supply, such information and references to records as will enable the commission to carry into effect the provisions and intent of this act; and shall have the right to enter upon private property to make investigation for the purposes of carrying out the provisions of this act. For the purpose of carrying out fully the intent and spirit of this act, the said commission shall have full power and authority to gather any and all such evidence as it may deem proper and necessary in order to present the same to the proper authorities for the purpose of instituting prosecutions against any and all persons, firms or corporations found violating any of the laws of any municipality, county or of the state or of the federal government, concerning any of the matters in this act referred to.

SEC. 10. For the purpose of carrying out to the fullest extent the provisions hereof, the said commission or any member thereof shall have power to hold hearings for the purpose of investigation or inquiry, and for the purpose of reaching an amicable settlement of controversies existing between persons, firms, and corporations mentioned herein; and to this end and purpose, the said commissioners and each of them and such person as may be designated in writing by said commission, are hereby authorized and empowered to subpoena witnesses to appear at such hearings and to administer oaths. No decision shall be termed to be final until ratified and approved by the said commission and filed in its office. (Amended Stats. 1915, p. 848.)

SEC. 11. For the purpose of this act, the words immigrant and immigration shall refer to any alien who is within the state, either permanently or temporarily domiciled here, or in transit, or passing through the state to a contiguous state or territory; said words shall further refer to any alien who may first have taken up residence in some other state or in one of the federal territorial possessions, and then shall have removed to this state; said words shall further refer to all aliens coming to and being within the State of California. For the purpose of this act the word alien shall refer to all persons who are not native born or who have not received their final citizenship papers under the naturalization laws of the United States.

SEC. 12. This act shall not be construed to authorize or direct the commission of immigration and housing to induce or encourage immigration into this state or the United States.

SEC. 13. The commission of immigration and housing shall make an annual report to the governor, on the second day of January, of the operation of the commission.

SEC. 14. The sum of fifty thousand dollars is hereby appropriated out of any moneys in the state treasury not otherwise appropriated, for the purpose of carrying out the provisions of this act; and the State Controller is hereby authorized and directed to draw warrants upon such sum, from time to time, upon the requisition of said commission, approved by the board of control; and the state treasurer is hereby authorized and directed to pay such warrants.

SEC. 15. The commission may make investigations of the housing of immigrants and working people and of city planning in California and elsewhere, may encourage the creation of local city planning commissions and may furnish information as to the progress of other cities for the use of such commissions. It may investigate and report upon defective housing and the evils resulting therefrom and the work being done to remedy the same in California and elsewhere. It may make studies of the operation and enforcement of building and tenement house laws, of housing finances and taxes, of zoning and districting regulations and may promote the formation of organizations intended to increase the supply of wholesome homes for the people, and aid in the enforcement of any laws enacted to promote the purposes for which the commission is established. (Added by Stats. 1917, p. 1514.)

SEC. 16. It shall be the duty of each and every city planning commission or housing commission of any incorporated city or town in the State of California to file on the first day of June of each year with the secretary of the commission of immigration and housing of California a complete report of its transactions and recommendations to any municipal organization or private person or corporation during the previous year, and particularly to report any conflict in authority, lack of cooperation with local municipal authorities or with adjoining cities, with recommendations for needed legislation to properly carry on the development of their housing and city planning work. The commission may annually, or oftener, call a conference of representatives of these commissions, of local health officers, housing inspectors, building inspectors or such other municipal officers as it shall deem advisable to carry out the purposes of this act. The commission may employ city planners and other persons whose salaries, wages and other necessary expenses of the commission will be provided for out of the funds at the disposal of the commission. (Added by Stats. 1917, p. 1514.)

SEC. 17. The commission may make an annual report on housing and city planning to the governor, which the state printer shall cause to be printed as a public document, and copies of this report shall be filed with each and every local housing and city planning commission in the State of California. The commission is further authorized to furnish information and suggestions from time to time to city governments, housing and city planning commissions and other public, semipublic or private bodies such as may, in its judgment, tend to promote the purposes for which the commission is established. (Added by Stats. 1917, p. 1514.)

APPENDIX A.

REPORT OF DEPARTMENT OF LABOR AND INDUSTRIAL RELATIONS.

TO

GOVERNOR FRIEND WM. RICHARDSON AND THE MEMBERS OF THE
FORTY-FIFTH SESSION OF THE CALIFORNIA LEGISLATURE.

To the Governor and

To the Senate and Assembly of the State of California:

Chapter 604 of the Laws of 1921 created a Department of Labor and Industrial Relations, composed of four divisions: Industrial Accident Commission, Commission of Immigration and Housing, Industrial Welfare Commission, and the Bureau of Labor Statistics. Provision was made in the law for the co-relating of administrative work, the determination of complaints, the prevention of overlapping and duplication of activities, and the transference of funds from one division to another, by majority vote. Chapter 604 further provides that "The Department of Labor and Industrial Relations shall submit a report to the governor and to the forty-fifth session of the legislature embodying a complete plan of reorganization and departmentalization of the activities herein mentioned."

ORGANIZATION OF DEPARTMENT.

Preliminary meetings were held by the members of the four divisions after the close of the 1921 legislature and prior to formal organization on October 26, 1921, as required by law. The representatives selected by the respective divisions were:

WILL J. FRENCH (Chairman), Industrial Accident Commission;
SIMON J. LUBIN, Commission of Immigration and Housing;
KATHERINE PHILIPS EDSON (Secretary), Industrial Welfare Commission;
WALTER G. MATHEWSON, Bureau of Labor Statistics.

A close study was made of the laws and powers of the four divisions so important to the industrial and social welfare of the citizens of California. Graphs were prepared. Legal opinions were secured to point out possible sources of contact or of conflict. A special committee, known as the Committee on Inspection and Complaints, was appointed, one member from each division, to ascertain definitely the status of affairs and to recommend accordingly. This committee has met at regular intervals, has found the claims of duplication and overlapping of activities to be without foundation and has planned itineraries of employees so that there would be the maximum of advantage to the state at a minimum of cost.

Regular meetings have been held by the representatives and, at longer intervals, by all the members of the four divisions.

A SURVEY OF ADMINISTRATIONS IN OTHER STATES.

One of the most important tasks undertaken by the Department of Labor and Industrial Relations was to ascertain the experiences of other states, especially those that have consolidated, in different ways, state departments comparable with those now in existence in California. A voluminous and interesting correspondence resulted. Letters of inquiry were sent to the secretaries of employers' organizations and of federations of labor in the following states: New York, New Jersey, Massachusetts, Pennsylvania, Illinois, Ohio, Wisconsin, Oregon and Washington. The National Association of Manufacturers and the American Federation of Labor were asked for their views of the best method of administering labor laws. Men of recognized standing in the country, and who have made a close study of the problem under consideration, were solicited for their opinions, and replies are in hand from Ethelbert Stewart, U. S. Commissioner of Labor Statistics; Carl Hookstadt, U. S. Bureau of Labor Statistics; Professor John R. Commons of the University of Wisconsin; Dr. John B. Andrews, Secretary of the American Association for Labor Legislation.

The answers to the general letter of inquiry vary, as a rule, because the writers consider the laws and experiences of their respective states as paramount. Too close concentration of power in administration of labor laws is generally condemned, on the theory that some degree of representation to employers and employees is preferable to the pulling and tugging of either one group or the other to have its representative selected. An illustration of this is furnished by the New York Evening Post, which printed a series of articles on November 2, 3, 6 and 7, 1922, setting forth the results of an independent investigation into the administration of labor laws in the state of New York, decidedly unfavorable to what is termed the "political reorganization" of the Labor Department, and despite the support of Governor Miller by the Evening Post in the campaign just closed. References were made to the weakening of factory inspection, delaying workmen's compensation activities and hampering the New York state employment service. The press dispatches say that Governor Smith is going to displace the present head of New York's Industrial Commission, and in the New York Times he has declared himself strongly in favor of extending the protection of humane legislation for the benefit of men, women and children. This merely illustrates the point that failure to give representation to employers and employees in matters of such vital importance to them will, sooner or later, result in the chaos now described in New York state after a brief experience.

One fact noted in the replies received is the general approval given to a separate department to administer workmen's compensation and kindred legislation. One reason for this is the judicial, or semi-judicial, nature of the work, the constitutional or legal requirements, and the general acceptance of representation for capital and labor on industrial accident commissions or workmen's compensation boards. A notable example of this is furnished by the state of Illinois. Sweeping consolidations of departments have taken place in that state, and the Industrial Commission is maintained a separate unit, as formerly, even though it is administering a law without safety and insurance and other large departments, such as are included in the California law.

Attention is directed to the letter of Professor John R. Commons, because of his commanding position in the domain of economics and his past experience as a member of the Industrial Commission of Wisconsin. He wrote on July 5, 1922:

“It may be possible in cases where you have the separate boards that have been doing good work and are quite proud of their work, and have enlisted the efforts of exceptionally good men, that such boards should be retained and that a joint representation affair would be preferable to wiping out boards that have made good records. I consider that the most important need for all is public-spirited and able people to join in the administration of labor laws, and would under no circumstances advocate consolidation on the mere doctrinaire belief in the efficiency of centralization. Then, there is another danger in too much centralization, as shown in the experiences in Ohio and New York. It concentrates attacks upon the commission and tends to line up partisan politics or organized capital and labor to control the commission.”

Not one of the replies from other states reports a state department comparable to the California Commission of Immigration and Housing, and industrial welfare commissions are few and far between.

INFORMATION CONCERNING THE CALIFORNIA COMMISSIONS.

Our experience is that some citizens have the opinion that there are four labor commissions possessing varying memberships and all operating on a full-time basis. In an effort to clear away this misunderstanding it is advisable to briefly present the facts, as to personnel, appropriations from the state treasury and the number of employees.

INDUSTRIAL ACCIDENT COMMISSION.

There are three full-time members of this Commission: Will J. French, A. J. Pillsbury and A. H. Naftzger. The latter is the Los Angeles member and supervises the work in the southern field. There were 550 industrial deaths in California in 1921, 1643 permanent injuries and 123,336 temporary injuries. Besides administering a compensation department that brings thousands of formal and informal cases up for consideration each year, there are ten main departments under the Commission's jurisdiction, including the important Safety Department with its seven divisions. There was appropriated the sum of \$267,000 for the fiscal year ending June 30, 1922. The number of employees was approximately 136. (The expenses and employees of the State Compensation Insurance Fund are not included in the foregoing, because the expenses come out of premiums paid in by employers, and not one cent comes out of the state treasury; the number of employees varies according to the exigencies of business.)

COMMISSION OF IMMIGRATION AND HOUSING.

There are four members (one vacancy) of this Commission: Simon J. Lubin, Archbishop E. J. Hanna, Dr. J. H. McBride and Paul Scharenberg. These men serve the State of California without cost, either as to salary or per diem. Their duties include full inquiry, exam-

ination and investigation into the condition, welfare and industrial opportunities of all immigrants arriving and being within the state, to promote their interests, and to bring to both immigrants and their children the best opportunities for acquiring education and citizenship. Immigrants unacquainted with the common language and methods are assisted in ways impossible to particularize in a brief statement.

A monumental work has been done in placing the labor camps in California in a sanitary condition and to generally supervise the welfare of a migratory group of workers who, prior to 1913, were helpless against social and economic errors. California is in a class by itself in respect to migratory labor, owing to the tens of thousands employed in harvesting crops and in the lumber industry during summer months.

Hotel, tenement and dwelling-house laws also come under the Commission's jurisdiction. The Commission is investigating, under the mandate of the 1921 legislature, the practicability of the State of California assisting workmen to acquire and build homes.

The last year's appropriation for the Commission was \$91,288. The number of employees averaged between 20 and 25.

INDUSTRIAL WELFARE COMMISSION.

There are five members of this Commission: A. B. C. Dohrmann, Walter G. Mathewson, Henry W. Louis, Paul Sinsheimer and Mrs. Katherine Philips Edson. They serve without salary, excepting for a per diem paid for stated meetings and per diem paid one of the members as executive commissioner. The duties of the Industrial Welfare Commission include supervision over the employment of women and minors, the determination of minimum wages and maximum hours, and to make investigations into the comfort, health, safety and welfare of such women and minors. Payment of less than the minimum wage provided by law is prohibited. Unpaid wages are collected by the Commission and every assistance extended those usually without any form of organization for their own protection and who were subject, in former years, to conditions of work and pay that were deplorable and harmful to the state. California's minimum wage of \$16 a week is the highest rate paid in the United States to women and minors in industry. In other states where minimum wage legislation has been consolidated in different ways the work has been minimized and its effect lost. The appropriation for the year was \$65,492. The number of employees was 19.

BUREAU OF LABOR STATISTICS.

Walter G. Mathewson is the Labor Commissioner. There are at least fifty general labor laws in California requiring the continual exercise of his administrative and enforcement powers. All of these laws are vital to the wage-earners of the state, as they involve, among other things, the regulation of private employment agencies, the supervision over working conditions, and the enforcement of the laws pertaining to payment of wages. The significance of the enforcement of the wage laws is shown by the fact that in the one fiscal year ending June 30, 1922, the Bureau of Labor Statistics collected \$228,813.49 in unpaid wages.

During the last biennial period, more than one-half of the bureau's appropriations was used in the administration of the free public employment offices—a work of inestimable value to the workers as well as to agricultural and manufacturing interests of the state. The bureau's appropriation for the last fiscal year was \$160,235, of which 47 per cent was used for the free public employment offices, leaving only \$84,825 for the administration and enforcement of all other labor laws. The number of employees averaged 75.

The limitation of space prevents further reference to the multitudinous duties assigned to the Labor Commissioner and to the importance of this office to the workers and employers of the state.

FACTS OF IMPORTANCE.

In considering the instructions laid down by chapter 604, we believe it to be our duty to point out the following facts:

1. Two of the four divisions of the Department of Labor and Industrial Relations are served by representative citizens of the northern and southern parts of California, without expense for salaries and, so far as the Commission of Immigration and Housing is concerned, without any per diem expense for stated or other meetings. We are decidedly of the opinion that it is advantageous to the state to have this free service from public-spirited citizens and we do not deem it the part of wisdom to recommend reorganization that will lose such service. Certainly it would be necessary to add to state expenditures if the work now performed by these two groups should be assigned to those employed, or to be employed, on a full-time basis. Furthermore, it would be impossible to continue the free service if the work was supervised by a full-time official, or officials.

2. There are four full-time members of the remaining two divisions—three on the Industrial Accident Commission and the Labor Commissioner. With one member of the first-named division in Los Angeles, there are left three officials to administer one of the most complete compensation systems in the United States and to supervise approximately fifty general labor laws. Our research into the experiences of other states convinces us that California's record in this respect is good and that it is superior to many other jurisdictions.

3. As at present constituted, labor, capital and the public at large have representation on three of the four divisions, and this is an excellent procedure. The courts have upheld the status of the Industrial Accident Commission, in accordance with the constitutional amendments adopted by California's voters, and the country-wide opinion is that a small group should specialize in the problems of compensation, safety, insurance, rehabilitation, and other sections of the work.

4. The approximate cost to the state treasury for the four divisions during one year was \$584,015. This is not a large amount, considering the importance of the legislation to employers, employees and the community at large. The number of employees assigned to the four divisions was about 253, with clerks and stenographers predominating.

CONCLUSION.

After a careful and thorough study of the problem assigned us by Chapter 604, we are of the opinion:

First. That the departmentalization plan outlined by the 1921 legislature for the Department of Labor and Industrial Relations should be continued, inasmuch as the citizenship of California is receiving valuable services without cost and the status is therefore entirely different from that which would be presented if there were twelve or fourteen full-time state employees in charge of the four divisions.

Second. We have not found in any other state a department functioning like the Commission of Immigration and Housing, and the proper supervision of immigrants and the prevention of tenement-house conditions during this period of California's development will be reflected in the enrichment of our common citizenship during the years to come. Likewise the Industrial Welfare Commission is doing a work for women and minors unlike that done in any other jurisdiction we have investigated.

Third. We recommend that the four divisions of the Department of Labor and Industrial Relations be housed under one roof in the downtown section of San Francisco, thereby enabling the closest kind of cooperation to be maintained and constant supervision exercised over the movements of state employees, so that maximum services will be rendered by those whose duties cause them to travel. The convenience of citizens doing business with the department will be subserved by this centralization.

Respectfully submitted.

WILL J. FRENCH, Chairman,
SIMON J. LUBIN,
KATHERINE PHILIPS EDSON, Secretary,
WALTER G. MATHEWSON,

Representatives Department of Labor and Industrial Relations.
January 12, 1923.

APPENDIX B.

THE CENSUS AND THE REPORTS OF THE UNITED STATES IMMIGRATION COMMISSIONERS.

An interesting commentary may be drawn from a study of the 1920 census in connection with the reports of the United States Immigration Commissioners for the fiscal years 1913 to 1922. The 1920 census shows that California has a total population of 3,426,861 of which 787,689 are foreign-born, or 22.98 per cent. More than two-thirds of this number live in our cities. The foreign-born are scattered throughout the state. At least 5 per cent of the population of every county in the state are foreign-born white and there are more than 20 per cent of foreign-born whites in each of 18 counties.

The trend of immigration from the reports of the United States Immigration Commissioners appears to be leading to California as is shown by the following table:

	Total immigration to United States	Total immigration to California	Percentage	Rank in States
1913 -----	1,197,892	32,277	2.6	7
1914 -----	1,218,480	32,089	2.9	8
1915 -----	326,700	20,116	6.1	4
1916 -----	298,826	17,101	5.6	4
1917 -----	295,403	16,354	5.5	4
1918 -----	110,618	12,098	10.9	3
1919 -----	141,132	16,575	11.0	3
1920 -----	430,001	32,502	7.5	4
1921 -----	805,228	43,242	5.3	7
1922 -----	309,556	23,624	7.6	3
Total for 10 years-----	5,133,836	245,878	4.9	

“Total Immigration to California” in the above schedule means only those who at ports of entry gave California as their destination. There is no check on the number of immigrants coming to the United States destined for other states, who drift to California some time after their arrival. This is a considerable number. California receives immigrants from practically every country in the world.

The table above set forth shows distinctly our problem. It shows the follow-up work that is necessary to be carried on to convince each of the incoming immigrants that the United States is just what he considered it to be when he left his home—a country of opportunity and freedom. It is our duty to convince him that this should be his home, the place to raise his family and that he should become a citizen.

APPENDIX C.

THE STATE HOUSING INSTITUTE.

The Commission of Immigration and Housing, after the referendum on the 1921 Housing Law had been decided, following the custom established in 1916, called a Housing Institute for December 14th, to be held in San Francisco at which time persons from all walks of life and all sections of the state who were interested in housing gathered and discussed the housing laws generally. After this general discussion a committee was appointed, composed of—

J. J. Backus, Chief Inspector of Buildings, Los Angeles, representing the City of Los Angeles and the Southern California Chapter American Institute of Architects.

J. P. Horgan, Chief Building Inspector, San Francisco, representing the City and County of San Francisco.

A. M. Edelman, Los Angeles, representing California State Board of Architecture.

Robert Greig, Building Inspector, Berkeley, representing the City of Berkeley.

A. C. Horner, Building Inspector, Stockton, representing the City of Stockton and the Building Inspectors Association.

Chief M. J. Kearns, San Francisco, representing the Fire Department of San Francisco.

Felton Taylor, San Francisco, representing the Apartment House and Hotel Interests.

To this committee were added the Attorney and Executive Officer and the Director of Housing of the Commission of Immigration and Housing who were ex officio members without the right to vote. The Board of Health of the city and county of San Francisco was invited to send a representative and did send Mr. James E. Britt.

This committee worked for six and a half days using the laws which are now in force and effect, the 1921 Act which was defeated by referendum and a proposed law drawn by the Commission. The result was presented to the people interested in housing throughout the state and suggestions and criticisms requested.

The committee met again on January 10th, considered all suggestions made and then submitted a draft to the second session of the Housing Institute, which was held on January 12th in San Francisco. Again persons representing all walks of life and all sections of the state who were interested in housing attended. They considered the draft of the proposed bill submitted by the committee and after discussion approved it. This bill has been introduced in the Senate by Senator Inman as Senate Bill Number 52.

APPENDIX D.

LIST OF PUBLICATIONS ISSUED BY COMMISSION OF
IMMIGRATION AND HOUSING OF CALIFORNIA.

ANNUAL REPORT

ON THE

Building and Loan Associations

OF THE

State of California

BY THE

BUILDING AND LOAN COMMISSIONER

In accordance with an Act of the Legislature, approved April 5, 1911, to
His Excellency WILLIAM D. STEPHENS, Governor
of the State of California

SEPTEMBER 15, 1921

CALIFORNIA STATE PRINTING OFFICE
SACRAMENTO, 1921

REPORT

OF THE

BUREAU OF BUILDING AND LOAN SUPERVISION.

OFFICE OF THE BUILDING AND LOAN COMMISSIONER,
SAN FRANCISCO, September 15, 1921.

To His Excellency, WILLIAM D. STEPHENS,
Governor of California,
Sacramento, California.

SIR: Pursuant to the provisions of section 5 of the "Building and Loan Commission Act," I am submitting for your consideration the Twenty-eighth Annual Report of this department, relative to the operation and condition, individually and collectively, as of the close of their several fiscal terms, of the building and loan associations of California, for and during the seventy-second fiscal year of the state, ended June 30, 1921.

Prior to the passage of the act of March 31, 1891, all corporations that were engaged in what is now known as the building and loan association business were formed under the provisions of the original Title XVI of the Civil Code, relating to "Land and Building Corporations."

Several of the associations now in successful operation were formed under that title, the charter of the oldest dating back to August, 1874. The original idea contemplated a purely mutual organization with shares in "serial" form. This was continued until the act of 1907 became effective and legalized the transaction of business on the non-serial or "Dayton" plan, and at the same time legalized the introduction of guarantee capital. That same act provided for the creation of a "reserve" fund in the mutual associations, as a protection against losses that invariably arise in every class of business, and which are especially liable to result where it becomes necessary to foreclose upon the security pledged for a loan, because of the failure of a borrower to comply with the terms of his contract.

In the guarantee capital associations that capital and its surplus reserve assume all liability for losses, thus the investor in both classes is much better protected than was possible under the earlier laws. Both classes advocate and teach the lessons of thrift and home owning,

especially among salaried employees and wage earners, with the result that in many localities a large percentage of the homes have been acquired through loans from these associations.

Of the 86 associations reporting during the past fiscal year, 36 have a paid-in guarantee capital, while 60 still operate upon the mutual plan, with an annually increasing reserve, as an added protection, and 44, mostly mutuals, still retain the "serial" plan as regards their installment shares.

Because an association may have a paid-in guarantee capital does not, of necessity, preclude its operation as a "mutual," especially as regards its installment shares, which the law apparently contemplates it should also have.

The improvement in the volume of assets, so particularly noticeable in the last annual report, has continued during the past fiscal year—the net gain being \$8,645,254.12, or 18.07 per cent—bringing the gross assets up to \$56,496,548.56.

The number of associations on the active roll has increased from 95 to 98, eight new associations having been formed and licensed, while four have been retired by consolidation, and one small one, which had never been very successful, by voluntary liquidation. Two associations formed since January last will make their first reports during the seventy-third fiscal year.

The names, locations and dates of license of the eight new associations will be found under the designation of "Domestic Associations," as well as the names and locations of those retired and in liquidation.

It is specially noticeable that only 26 counties, less than one-half the counties of the state, have associations within their borders, even though there are many localities in other counties that would be materially benefited by the organization of purely locals by enterprising and public minded residents.

The following table shows the assets, the increase or decrease of same, and the number of associations, both active and reporting, in each of the twenty-six counties.

DISTRIBUTION OF ASSETS BY COUNTIES.

Counties	Asso- ciations	Number report- ing	Assets	Increase	De-crease
Alameda -----	7	7	\$2,060,636 75	\$338,001 75	
Fresno -----	2	2	225,235 20	45,732 21	
Humboldt -----	1	1	27,464 21		\$706 32
Kern -----	2	2	639,412 22	63,267 89	
Lassen -----	1	1	4,680 50	4,680 50	
Los Angeles -----	19	18	26,568,491 78	3,827,675 61	
Madera -----	1	1	57,399 90	3,264 73	
Marin -----	3	3	242,214 59	15,360 09	
Merced -----	1	1	204,480 36	19,162 05	
Napa -----	1	1	414,017 47	14,727 80	
Orange -----	3	3	2,059,213 02	452,607 57	
Placer -----	1	1	68,530 26	831 60	
Riverside -----	4	4	289,094 02	88,416 40	
Sacramento -----	1	1	605,306 18	4,191 91	
San Bernardino -----	5	4	3,178,785 71	397,564 37	
San Diego -----	5	5	667,784 17	115,651 33	
San Francisco -----	17	17	5,370,964 79	393,251 39	
San Luis Obispo -----	2	2	328,005 47	95,749 12	
San Joaquin -----	3	3	3,523,634 75	570,604 36	
San Mateo -----	2	2	599,849 86	75,708 25	
Santa Barbara -----	2	2	1,835,701 22	258,615 38	
Santa Clara -----	7	7	5,897,836 16	1,678,547 02	
Santa Cruz -----	1	1	27,533 36		7,462 59
Sonoma -----	2	2	171,585 98		3,945 05
Tulare -----	3	3	588,475 82	75,555 36	
Ventura -----	2	2	840,214 81	118,255 43	
Totals -----	98	96	\$56,496,548 56	\$8,657,422 08	\$12,167 96
Net increase -----				8,645,254 12	

From the foregoing schedule it will be noticed that only three of the counties specified, embracing in all only four comparatively small associations, show a decrease.

In the report for 1920, Yolo county was represented by one small association, but during the past year its principal place of business was removed to San Francisco, thus increasing the assets of the latter county at the expense of the former, which now has no association within its borders.

The distribution of the increase and decrease in the assets of the several associations, when divided into four different grades as to volume, is indicated in the following tabulation:

Associa- tions of each grade	With assets of	Number showing gain	Largest per cent of gain	Number showing loss	Largest per cent of loss
34	Under \$100,000 -----	30	160	4	21
33	\$100,000 to \$500,000 -----	29	80	4	8
13	\$500,000 to \$1,000,000 -----	12	53	1	0.25
16	Over \$1,000,000 -----	16	50	0	0

The schedule, "Changes in Assets and Liabilities," illustrates the changes in the volume of the several features of these assets and liabilities. Among the assets the "loans in force" have increased \$9,311,508.98, and the "money in office and bank" \$27,291.62, while the following have decreased: "arrearages," \$21,256.30; "real estate owned," \$239,239.95; "advances," \$87,811.71; and bonds owned, \$338,143.46.

In the liabilities there has been an increase in every feature with the sole exception of "loans due and incomplete," which have decreased \$392,528.96. The increase of the guarantee capital has been \$628,515.26 in volume and 5123 in number of shares issued, or subscribed for and partially paid up. Installment shares have increased \$1,551,733.45 in volume and 66,579 in number of shares subscribed for and issued during the year. The full-paid shares have increased \$1,852,779.43 in volume and 14,998 in shares reported as outstanding. The number of investment certificates of all classes reported show an increase of 33,255 in number and \$3,999,550.58 in volume of money. The "reserve and undivided profits" show an increase of \$99,397.82. Notwithstanding the great increase of the investments in the several classes of shares and certificates the demand for loans has apparently necessitated an increase in "money borrowed" to the extent of \$354,438.26.

The decrease in the real estate owned, both as to the number of separate pieces and the volume, converts an inactive asset into an income earning one of material value, and reduces the present holdings to \$669,852.73, or 1.18 per cent of the gross assets, of which \$178,900 is represented by the office buildings owned by seven associations.

The increase of 66,579 in the number of installment shares, noted above, is a feature deserving of special attention, not only because of the fact that the increase is practically double the increase in all classes for 1920, but because it demonstrates that this class of investment will readily be taken by the public when offered by responsible and reputable associations. Of this increase, 19,775 shares were gained in four associations employing solicitors on a commission basis, and 46,804 shares in associations for which no solicitors were licensed.

The new loans upon real estate security are reported as being 8962, of which 3318, or 37.02 per cent, appear as having been made for new construction, and 611 are reported as having been made for repairs and additions.

The volume and percentages of increase and decrease for the year, in the material features, are condensed as follows:

INCREASES.

	Volume of increase	Percentage of increase
Assets -----	\$8,645,254 12	18.07
Loans -----	9,311,508 98	21.25
Money on hand -----	27,291 62	1.81
Guarantee capital -----	628,515 26	43.16
Dues—installment shares -----	1,551,733 45	13.19
Paid-up shares—principal -----	1,852,779 43	18.80
Investment certificates -----	3,999,550 58	26.63
Reserve and undivided profits -----	99,397 82	6.60
Net profits for year -----	719,580 74	27.16
Borrowed money -----	354,438 26	30.37
Number of shareholders -----	7,349	27.53
Number of certificate holders -----	4,333	31.56
Number of shares in force -----	86,700	21.81
Number of investment certificates -----	33,255	22.08
Number of borrowers -----	1,494	6.29
Number of new real estate loans -----	1,013	12.73
Number of new building loans -----	727	28.06
Number of loans for improvements -----	611	100.00
Number of new share loans -----	10	1.11
Number of new associations licensed -----	8	8.42

DECREASES.

	Volume of decrease	Percentage of decrease
Arrearages -----	\$21,256 30	13.72
Real estate owned, cost on books -----	239,239 95	26.32
Real estate owned, separate pieces -----	85 00	40.89
Bonds owned -----	338,143 46	28.42
Incomplete loans -----	392,528 76	21.10
Associations owning real estate -----	12 00	22.64

The receipts from shareholders and investors, for the year, amount to \$22,332,494.47, or the equivalent of 39.50 per cent of the present gross assets.

The disbursements for the same period, on account of withdrawals and maturities, were:

On account of invested principal -----	\$14,933,549 39
On account of profits and dividends -----	2,526,029 21

An aggregate of ----- \$17,459,578 60

or more than 42 per cent of the gross liability to shareholders and investors, other than guarantee shareholders, at the beginning of the term.

The rates of interest charged upon loans range from 6 to 10.60 per cent per annum; and usually depend largely upon locality, security offered, and local money conditions. The mean average of all these rates is 8.288 per cent, an increase of 0.335 per cent over the corresponding average for 1920.

The interest collections, based on the average loans in force, is 8.332 per cent, or a gain of 0.324 per cent.

The approximate gross income from all sources is 8.392 per cent, an increase of 0.345 per cent.

The percentage of operating expenses, exclusive of taxes, is 1.342 per cent upon the average loans in force, and is the equivalent of 15.991 per cent of the apparent gross income.

CHANGES IN ASSETS SINCE 1910.

The changes in assets, as well as in the total roll and number reporting since 1910, are as follows:

Years	Total roll	Members reporting	Assets	Increase
1910 -----	113	107	\$21,255,176 49	\$1,027,060 09
1911 -----	105	96	23,340,012 38	2,084,835 89
1912 -----	107	91	24,866,571 97	1,526,559 59
1913 -----	98	93	28,316,021 97	3,449,450 00
1914 -----	97	92	29,515,762 57	1,199,740 60
1915 -----	97	89	30,441,084 03	925,321 46
1916 -----	96	89	32,794,018 18	2,352,934 15
1917 -----	91	86	35,928,446 84	3,134,428 66
1918 -----	90	86	37,120,998 91	1,192,552 07
1919 -----	90	85	38,374,331 91	1,253,333 00
1920 -----	99	87	47,851,294 44	9,476,962 53
1921 -----	100	96	56,496,548 56	8,645,254 12

FOREIGN ASSOCIATIONS.

The Western Loan and Building Company of Salt Lake City, Utah, is the only foreign association licensed to transact business in this state; the condensed report of which, as of December 31, 1920, appears on the last page of the Appendix.

On that date it reported 47,731 shares of installment stock in force in California, with \$221,247.31 in dues and profits to the credit of 2053 shareholders.

The number of borrowers was reported as 201, representing loans of net value of \$737,803.39.

The law requires that it shall keep on deposit with this department notes and mortgages of a net value of \$50,000, but on that date it had on deposit 148 notes and mortgages of a net value of \$328,049.81.

The business of foreign associations is not included in the tabulations of the California associations, but their California business is included when fixing the annual license for the support of this office.

By adding the California assets of this association to the tabulated results of the 96 domestic associations we have \$57,234,551.95 as the aggregate building and loan assets of the state.

ASSETS AND LIABILITIES.

Assets.	
Loans on mortgages and shares	\$53,107,575 50

Percentage of new loans to loans in force.....	49.67%
Percentage of loans repaid during year.....	27.45%
Mean average of all rates of interest.....	8.288%
Interest collections reported to average loans in force.....	8.332%
Apparent gross income to average loans in force.....	8.392%
Apparent gross income to dues capital.....	9.646%
Shares in force last report.....	397,529
Shares issued since last report.....	167,855
Shares cancelled since last report.....	81,155
Shares in force this report.....	484,229
Net gain—installment shares.....	66,579
Net gain—full-paid shares.....	14,998
Net gain—guarantee shares.....	5,123
Investment certificates in force last report.....	150,596
Certificates issued since last report.....	86,801
Certificates cancelled since last report.....	53,546
Certificates in force, this report.....	183,851
Net gain in number of certificates.....	33,255
Number of associations owning real estate.....	41
Number of pieces of real estate owned.....	123
Number of associations owning office buildings.....	7
Book value of real estate owned.....	\$669,852 73
Reserve and undivided profits.....	1,738,651 26
Guarantee capital and surplus.....	2,611,633 95

NET PROFITS.

The net profits reported for year were.....	\$3,368,300 72
Percentage of same to average loans in force.....	6.964%
Average for the past ten years.....	7.071%
Percentage of profits to average investment.....	8.005%
Average for past ten years.....	7.593%

DIVIDENDS.

The dividends reported as credited to installment shares represent 19 different rates ranging from 4 to 15 per cent, only six associations crediting less than 6 per cent. The mean average of all these rates is	7.028%
The dividends apportioned to installment shares was \$1,101,411 18 or	6.949%
The dividends paid to full-paid shares was	5.995%
The dividends paid or credited to investment certificates was.....	996,537 36 or 5.853%
The dividends paid guarantee capital was.....	265,466 67 or 14.965%

The foregoing percentage of dividends paid or credited are based on the approximate averages of investments in each class for the entire year.

SALARIES, TAXES AND OTHER EXPENSES.

	Amount paid	Percentage to loans in force
The salaries paid are reported as.....	\$327,016 52	0.676
The taxes paid were.....	41,287 56	0.086
The other expenses were.....	322,254 04	0.666
A total of.....	\$690,558 12	1.428
The percentage for 1920 was.....		1.361

OPERATING EXPENSES TO LOANS.

The element of taxes being a feature over which the management has no control, the *real* percentages of operating expenses then appear as follows:

	For 1921	For 1920
For salaries	0.676%	0.653%
For other expenses.....	0.666%	0.589%
Total percentage of operating expenses.....	1.342%	1.242%

OPERATING EXPENSES TO DUES CAPITAL.

The foregoing operating expenses, when based on the average "Dues Capital" of all classes of shares and certificates, appear as follows:

	For 1921	For 1920
For salaries.....	0.777%	0.748%
For other expenses.....	0.766%	0.670%
Totals.....	1.543%	1.418%

GROSS INCOME AND PERCENTAGES OF EXPENSES TO INCOME.

The apparent gross income to the average of "loans in force" for each of the past three years can be very closely approximated as follows:

	1921 (per cent)	1920 (per cent)	1919 (per cent)
Percentage of net profits.....	6.964	6.686	7.078
Percentage paid for taxes.....	0.086	0.119	0.131
Percentage of operating expenses.....	1.342	1.242	1.211
Apparent gross income.....	8.392	8.047	8.420
Ratio of operating expenses to income.....	15.991	15.434	14.382

GROSS INCOME TO DUES CAPITAL.

Applying the same calculations to the average "Dues Capital" for the same three periods, we then have:

	1921 (per cent)	1920 (per cent)	1919 (per cent)
Percentage of net profits-----	8.005	7.652	7.583
Percentage paid for taxes-----	0.098	0.136	0.141
Percentage of operating expenses-----	1.543	1.418	1.297
Apparent gross income-----	9.646	9.206	9.21
Ratio of operating expenses to income-----	15.996	15.403	14.377

The affairs of the two associations, listed as in process of liquidation, are still unsettled, because of inability to dispose of real estate held, at satisfactory prices.

In the matter of the Benicia Building and Loan Association, the final report of liquidation is expected to be filed in the proper court at an early date.

During the fiscal year licenses were issued to eight new associations, the names, locations and dates of issue of each appearing under the designation of "Domestic Associations." Several other new associations are in various stages of formation in promising localities, four of which have been licensed since the close of the fiscal year.

During the fiscal year "Agents and Solicitors' Licenses" were issued to 90 local and traveling solicitors under the provisions of section 15a of the Building and Loan Commission Act, to solicit for loans and for the sale of shares and certificates, forty-nine of which were issued at the request of five California associations, and forty-one at the request of the "Western" of Salt Lake City, Utah. All such licenses expire automatically with the fiscal year of the state, but are renewable annually, at the request of the association originally applying, and the payment of the statutory fee of one dollar each.

The consolidation of six small Francisco associations, in such manner as to form two of fairly good size, referred to in the last report, was completed early in the fiscal year and the affairs of the two resulting associations appear to be progressing favorably.

The "Southern California" and "Metropolitan," both of Los Angeles, complied with all requirements of section 647a of the Civil Code, received the consent of the Commissioner, and consolidated their engagements, funds and property, aggregating \$2,138,132.12, under the name and style of the "Southern California-Metropolitan Loan Association,"

effective June 30 last. The future business is to be under the direction of a consolidated board composed of the directors of both the original associations, and with the original officers of both, but with some few of their official titles changed.

While the increase in the volume of assets is less than in the preceding year, it must be conceded that it is a very satisfactory increase considering the handicap of the prevailing unsatisfactory conditions that have depressed business operations in many lines. The associations, as a whole, are in a better financial condition than at any time in the past; losses, as they develop, are eliminated as they arise, and the reserve to provide therefor in the future steadily increases in volume, thus providing an increased protection to the investor in their shares and certificates. The prejudices of the past are fast disappearing, as the general public becomes the better educated as to the benefits to be derived from this class of investment, especially by those who have an earnest desire to acquire a home or to accumulate a fund, through the medium of small periodical payments, to provide against emergencies and adverse circumstances in later years. Experience has demonstrated that, for such purposes, no class of investment is superior in effectiveness or safety to the building and loan associations of the several states, when operated under adequate laws and just and competent supervision.

CONCLUSION.

Immediately following in the published report will be found a detailed statement of the receipts of this department, the names and addresses of the several secretaries, and the usual "Appendix" containing a condensed annual statement of the condition of each association, as of the close of its fiscal year, arranged in alphabetical order, both as to the city or town of location and to names of the associations therein, closing with the latest report of foreign associations doing business in this state.

Respectfully submitted.

GEO. S. WALKER,
Commissioner.

APPENDIX

Detailed Statement of the Condition

of the

Building and Loan Associations

of the

State of California

As compiled from the reports to the Commissioner for the
fiscal year ending June 30, 1921

ARRANGED ALPHABETICALLY BY CITIES, TOWNS, AND NAMES

BUILDING AND LOAN ASSOCIATIONS.

No. 1. ALAMEDA.

CENTRAL LOAN ASSOCIATION.

P. O. address, 2301 Central Avenue, Alameda.

(Incorporated July 29, 1909.)

JESSE L. DELANOY, Secretary.

F. N. DELANOY, President.

Fiscal year ended June 30, 1921.

No. of series, none.

No. of members and investors, 459.

No. of shares, 5835.

Assets.		Liabilities.	
Loans on definite contract	\$505,507 18	Guarantee stock, capital	\$25,000 00
Arrearages, on interest	3,215 44	Guarantee stock, surplus	15,500 00
Cash, in bank	7,653 64	Installment shares, dues	216,169 84
Furniture and fixtures	1,148 80	Installment shares, profits	47,026 33
Bonds owned	15,000 00	Investment certificates, principal	195,472 59
War Savings Stamps	758 00	Investment certificates, dividends	4,878 05
		Overdrafts and bills payable	20,000 00
		Loans due and incomplete	8,949 42
		Sundry ledger accounts	286 83
Total assets	\$533,283 06	Total liabilities	\$533,283 06

Receipts for Fiscal Year.		Disbursements for Fiscal Year.	
Balance from last report	\$6,975 26	Overdrafts and bills payable	\$118,000 00
Installment shares, dues	91,619 81	Loans on mortgages and shares	164,194 19
Investment certificates	183,836 84	Interest paid	1,989 14
Interest	35,910 66	Dividends on guarantee stock	4,250 00
Loans repaid	88,501 70	Dues repaid, installment shares	99,327 72
Overdrafts and bills payable	105,000 00	Profits repaid, installment shares	6,337 15
Advances repaid, ledger accounts	3,319 84	Investment certificates, principal	97,800 71
All other receipts	294 21	Investment certificates, dividends	6,192 33
		Advances, ledger accounts	2,593 59
		Salaries	4,744 00
		Taxes	387 84
		Other expenses	1,988 01
		Balance, cash in office and bank	7,653 64
Total receipts	\$515,458 32	Total disbursements	\$515,458 32

Installment Shares, With Age, Value, and Withdrawal Value.

Dayton plan.

Dues 50 cents per share per month.

Dividend, last fiscal year, 6 per cent.

Book value, dues plus dividend.

Withdrawal value, full book value.

No. 2. ALAMEDA.

COLUMBIAN MUTUAL BUILDING AND LOAN ASSOCIATION.

P. O. address, Room 88, 812 Broadway, Oakland.

(Incorporated July 18, 1893.)

R. R. READ, Secretary.

ROBERT R. YATES, President.

Fiscal year ended July 31, 1920.

No. of series, 22.

No. of members and investors, 234.

No. of shares, 2857.

Assets.		Liabilities.	
Loans, on definite contract, \$134,862.56; on shares, \$6,575 -----	\$141,437 56	Installment shares, dues-----	\$125,442 00
Arrearages, on shares, \$3,648.46; on interest, \$693.70 -----	4,342 16	Installment shares, profits---	26,035 88
Cash, in bank-----	2,970 96	Advance payments-----	6,249 15

ANNUAL REPORT

ON THE

Building and Loan Associations

OF THE

State of California

BY THE

BUILDING AND LOAN COMMISSIONER

In accordance with an Act of the Legislature, approved April 5, 1911, to
His Excellency WILLIAM D. STEPHENS, Governor
of the State of California

AUGUST 31, 1922

CALIFORNIA STATE PRINTING OFFICE.
SACRAMENTO, 1922

REPORT

OF THE

BUREAU OF BUILDING AND LOAN SUPERVISION.

OFFICE OF THE BUILDING AND LOAN COMMISSIONER,

SAN FRANCISCO, August 31, 1922.

*To His Excellency, WILLIAM D. STEPHENS,
Governor of California,
Sacramento, California.*

SIR: In conformity with the requirements of section 5 of the "Building and Loan Commission Act" the twenty-ninth annual report of this department, covering the tabulations and calculations derived from the last reports of all buildings and loan associations in active operation in this state, other than those organized during the six months prior to the close of the seventy-third fiscal year, ended June 30, 1922, is respectfully submitted for your consideration.

The general improvement in volume and membership apparently bears out the prediction in a former report that the general public is gradually becoming more familiar with the principles, and appreciative of the benefits accruing to members and investors in this class of financial institutions. The fact that, under the law, the purposes for which an association can be formed are "to encourage industry, frugality, home-building and savings among its shareholders, members and investors" is evidently fast supplanting the prejudices of the past, as it becomes the better known that the associations live up to the creed laid down by the law, are non-speculative and are in no wise to be classed with the "get rich quick" schemes so prevalent in many localities.

It is therefore apparent, from the figures contained herein, that the building and loan plan of investment is both popular and profitable to persistent investors in the several classes of shares and certificates provided by law, as is evidenced by the general increase and the dividends declared and paid.

Organized and operated on proper lines, honestly conducted and carefully supervised it is, without question, one of the most beneficent institutions of the present day. It encourages thrift and persistent effort in accumulation for future needs, and is a material factor in the upbuilding of every community in which an association is operated, as well as in establishing a well-to-do population in homes of their own with property interests to carefully safeguard in the future.

The number of associations on the active roll has increased from 98 to 109, and the number reporting from 96 to 102. Thirteen new associations were formed and licensed during the year, one retired by consolidation and one small one went into voluntary liquidation. Seven formed since January first last will make their first reports during the seventy-fourth fiscal year. The names, locations and dates of licenses of the new associations

appear under the designation of "Domestic Associations." One has been licensed since July first and several others are in process of formation in promising localities, and the formation of others is being agitated in localities not quite so promising for successful operation.

Right here the thought occurs that it might be wise for the commissioner to be vested with powers over the formation of new associations similar to those vested in the Superintendent of Banks over the formation and licensing of new banks.

Of the 102 associations reporting, 43 have a paid-in guarantee capital and 59 are operating on the mutual plan.

Forty associations, mostly mutuals, retain the "serial" plan of handling their installment shares and all others are operated on the permanent or "Dayton" plan.

The increase in the volume of assets, so noticeable during the two preceding fiscal years, has very closely been maintained during the seventy-third—the net gain amounting to \$8,236,211.49, thereby making the gross assets now total \$64,732,760.05.

Less than one-half the counties in the state are represented by the 102 associations reporting at this time. That there are many localities in other counties that would be materially benefited by the formation of purely local associations operated by enterprising and public-minded residents, there may be no question.

The following schedule illustrates the distribution of assets by counties, the increase and decrease of same during the year, and the number of associations reporting in each of the 26 counties:

DISTRIBUTION OF ASSETS BY COUNTIES

Counties	Associations reporting	Assets	Increase	Decrease
Alameda.....	8	\$2,679,781 96	\$619,145 21	
Fresno.....	2	260,353 66	35,118 46

Totals.....	102	\$64,732,760 05	\$8,237,798 62	\$1,587 13
Net increase.....			\$8,236,211 49	

New associations not reporting:

Stanislaus county.....	1
San Bernardino county.....	2
Los Angeles county.....	4

109 associations in 27 counties.

The largest increase in assets of a single association during the year was \$574,000, while 5 associations show a gain of over \$300,000 each, and 6 increased their assets upwards of \$200,000 each.

While the foregoing tabulation of "assets by counties" shows a decrease of \$1,587.13 in but one county having a single small association, there are 13 other associations, in eight of the other counties, with assets aggregating \$124,625.26 less than at the time of the report for 1921, and a similar condition appears in connection with the "shares in force," there being a net increase of 108,943 shares, of which 87,969 were "installment" and 12,412 were "full-paid," yet 24 associations in 13 counties, show a decrease of 6,557 installment and 1,847 full-paid shares.

The directors of those few associations that are apparently out of touch with the general forward movement shown by the large majority should make a survey to determine and remedy the conditions responsible for the results shown by their annual reports.

The schedule of "Changes in Assets and Liabilities" illustrates the changes in volume of the several features of each class, and it will be observed that, with the exception of "other real estate owned" and "bonds owned," every feature of both assets and liabilities show an increase, the outstanding features being "loan on mortgages and shares," \$7,669,355.93, as it is from this source that the associations derive their principal interest income. "Money in office and bank" follows with an increase of \$479,955.98, "advances and sundry ledger accounts" \$172,459.99, "real estate—office buildings" \$133,442.08, and "arrearages" \$30,627.84.

"Other real estate owned" shows a decrease of \$164,313.39 and "bonds owned" \$112,961.66.

Among the liabilities the principal increases are found in the investment feature—"installment shares" have increased \$2,133,127.06 in volume and 87,969 in number—"full-paid shares" \$1,502,231.73 in volume and 12,412 in number—"investment certificates" \$2,336,846.82 in volume and 31,102 in number—"guarantee stock" shows an increase of \$595,340.68. The "reserve and undivided profits" have increased \$201,109.32, thus making the total of this feature \$1,939,760.58, which with the guarantee capital and its surplus of \$3,225,201.01 provides a real reserve protection to investors of \$5,164,961.59 or 9.4 per cent of the total liabilities to the other three classes of investors.

The real estate owned is held by 34 different associations, of which 11 have acquired office buildings, or lots upon which to build for office purposes, and the net decrease, including both classes, has been \$30,871.31, thus leaving the real estate, aside from office buildings and lots, as representing only .504 per cent of the gross assets.

The increase in the number of installment shares of 87,969, noted above, is an added demonstration of the increasing popularity of this class of investment, as 81 per cent of the gross increase was apparently voluntary subscriptions with associations *not* employing licensed solicitors, and over 95 per cent of the increase in full-paid shares was obtained by the same associations.

The percentage of increase in each of twenty different features of the year's business is represented by the following schedule:

PERCENTAGES OF INCREASE.		Per Cent
In assets	-----	14.57
In loans	-----	14.42
In money in office and bank	-----	30.31
In guarantee capital	-----	28.46
In dues—installment shares	-----	16.20
In paid-up shares—principal	-----	12.90
In investment certificates—principal	-----	12.23
In reserve and undivided profits	-----	11.56
In net profits for year	-----	8.60
In borrowed money	-----	6.88
In incomplete loans—due borrowers	-----	52.53
In office buildings and lots	-----	74.59
In number of shareholders	-----	19.78
In number of investment certificate holders	-----	12.63
In number of borrowers	-----	7.52
In number of new building loans	-----	15.55
In number of installment shares	-----	24.22
In number of full-paid shares	-----	15.65
In number of investment certificates	-----	16.30
In number of associations licensed	-----	13.00

During the past year there was received from shareholders and investors \$23,772,775.37 or the equivalent of 36.72 per cent of the gross assets as of the close of the seventy-third fiscal year.

During the same period the disbursements on account of withdrawals and maturities were \$19,921,986.38, of which \$17,157,752.40 was on account of dues or invested capital and \$2,764,233.98 was for dividends and apportioned profits—in all aggregating more than 39 per cent of the gross liability to shareholders and investors at the beginning of the term.

The interest loaning rate charged by the several associations ranges from 6 to 10.80 per cent, depending largely upon locality, security and local money conditions, and includes fifteen different specific rates—the mean average being 7.843 per cent. The interest collections, based on the average loans in force, is 8.120 per cent, and, on the same basis, the approximate gross income from all sources has been 8.285 per cent.

The percentage of operating expenses, exclusive of taxes, is 1.340 per cent of the average loans, and is the equivalent of 16.174 per cent of the gross income, and by including the taxes the entire cost of operation equals 1.445 per cent of the average loans, indicating that the entire cost of operation has necessitated the use of 17.441 per cent of the approximate gross income.

CHANGES IN ASSETS SINCE 1910.

The changes in assets, as well as in the total roll and number reporting since 1910, are as follows:

Years	Total roll	Number reporting	Assets	Increase
1910	113	107	\$21,255,176 49	\$1,027,060 09
1911	105	96	23,340,012 38	2,084,835 89
1912	107	91	24,866,571 97	1,526,559 59
1913	98	93	28,316,021 97	3,449,450 00
1914	97	92	29,515,762 57	1,199,740 60
1915	97	89	30,441,084 03	925,321 46
1916	96	89	32,794,018 18	2,352,934 15
1917	91	86	35,928,446 84	3,134,428 66
1918	90	86	37,120,998 91	1,192,552 07
1919	90	85	38,374,331 91	1,253,333 00
1920	99	87	47,851,294 44	9,476,962 53

FOREIGN ASSOCIATIONS.

The only foreign association licensed to transact business in this state is the Western Loan and Building Company of Salt Lake City, Utah, the condensed report of which, as of June 30, 1922, appears on the last page of the Appendix. On that date it reported 79,408 shares of installment stock in force in California, with \$475,779.63 in dues and profits to the credit of 3,056 shareholders.

The number of loans was reported to be 546, representing a net value of \$1,302,116.11 loaned to borrowers in this state, of which 272 of the notes and mortgages, representing a net value of \$615,715.00 were on deposit with this department as a guarantee for the fulfillment of its contracts with investors in its shares.

The volume of business of this association is not included in the tabulations of the 102 California associations, but is included in fixing the annual license fees collected for the support of this office. By adding its California assets to the tabulated assets of the 102 domestic associations the building and loan assets of the state aggregate \$66,170,691.97.

Number of associations owning real estate.....	34
Number of pieces of real estate reported as owned.....	102
Number of associations owning office buildings and lots.....	11
Book value of office buildings and lots.....	\$312,342 08
Book value of other real estate owned.....	326,639 34
Reserve and undivided profits.....	1,939,760 58
Guarantee capital and surplus.....	3,225,201 01

NET PROFITS.

The net profits reported for year were.....	\$3,657,874 32
Percentage of same to average loans in force.....	6.840%
Average for past ten years.....	7.053%
Percentage of profits to average investment.....	7.404%
Average for past ten years.....	7.560%

DIVIDENDS.

The dividends reported as apportioned and credited to installment shares represent 27 different rates, varying from 4.30 to 14 per cent—only six associations crediting less than 6 per cent. The mean average of all these rates is.....			7.843%
Apportioned to installment shares.....	\$1,179,331 23 or		6.598%
Apportioned to full-paid shares.....	788,021 54 or		6.670%
Apportioned to investment certificates.....	1,152,034 97 or		5.512%
Apportioned to guarantee capital.....	299,512 39 or		10.325%
Total dividends reported.....	\$3,418,900 13		

The foregoing percentages are based on the average investment in each class for the entire year.

SALARIES, TAXES AND OTHER EXPENSES.

Amounts expended for each feature and percentage to the average loans in force appear as follows:

	Amount paid	Percentage to loans in force
The salaries paid are reported as.....	\$365,673 89	0.665
The taxes paid are reported as.....	57,864 25	0.105
The other expenses were.....	371,262 95	0.675
A total of.....	\$794,801 09	1.445
The percentage for 1921 was.....		1.428

OPERATING EXPENSES TO AVERAGE LOANS.

As the element of taxes is a feature over which the management of the several associations has no control, the *real* operating expenses are represented as follows:

	Percentage for 1922	Percentage for 1921
Paid for salaries.....	0.665	0.676
Paid for other expenses.....	0.675	0.666
True percentage of operation.....	1.340	1.342

OPERATIVE EXPENSES TO DUES CAPITAL.

	Percentage for 1922	Percentage for 1921
Paid for salaries.....	0.741	0.777
Paid for other expenses.....	0.753	0.766
Cost of operation on this basis.....	1.494	1.543

GROSS INCOME AND PERCENTAGE OF EXPENSES TO INCOME.

The approximate gross income, to average loans in force, for the past three years, appears to be as follows:

	Percentage for 1922	Percentage for 1921	Percentage for 1920
Percentage of net profits.....	6.840	6.964	6.686
Percentage of taxes.....	0.105	0.086	0.119
Percentage of operation.....	1.340	1.342	1.242
Apparant gross income.....	8.285	8.392	8.047
Ratio of operation to income.....	16.174	15.991	15.434
Based on the 'Dues Capita'—			
The apparent gross income is.....	9.015	9.646	9.206
And ratio of operation to income.....	16.572	15.996	15.402

The affairs of the two associations noted in the report for the seventy-second fiscal year as being in liquidation, remain in practically the same status as at that time, and it is hoped they will be finally closed ere the next report is due.

One other small association in the southern part of the state, became financially involved through the unwise expenditure of capital funds for expenses, though in no wise insolvent, and, on the advice of this office, went into voluntary liquidation, with the present prospect that its affairs will be settled at an early date.

During the fiscal year just closed "Agents and Solicitors' Licenses" were issued to 175 local and traveling solicitors, under the provisions of section 15a of the Building and Loan Commission Act, to solicit for loans and for the sale of shares and certificates, of which 71 were issued at the request of the "Western Loan and Building Co." of Salt Lake City, Utah, and 104 at the request of 9 of the California associations. Thirteen were canceled for various reasons, none of which were of a nature that would

prevent the granting of future licenses, should a request therefor be forthcoming. .

To the end that all associations may more easily comply with the provisions of the internal revenue laws, and with the requirements of the Commissioner of Internal Revenue, it is deemed advisable to renew the recommendation made in the report of this office for 1912: that section 638 of the Civil Code should be so amended as to prevent the indiscriminate loaning to others than members and shareholders, except where loans are made on the security specified in section 647, and still permit the occasional loaning of surplus funds not otherwise loanable, in volume not to exceed a specific fixed percentage of all loans in force—such loans to be carried on the books in an account by themselves, and that no such loan be made for a term exceeding three years.

The practice that has obtained on the part of some associations of suspending the issuance of free installment shares, is one not calculated to foster the true building and loan idea.

Installments shares and installment investment certificates should participate in common in the net profits subject to distribution, and only full paid shares and full paid certificates be permitted to participate at a rate fixed in advance and to be set forth in the certificate issued.

Because of the zeal displayed by the officers and directors of some of the building and loan associations, in an honest endeavor to so educate the public that all may appreciate the benefits that accrue by reason of investment and membership therein, and with a laudable desire to increase the volume of the business of their associations, the bounds of propriety appear, in some instances, to have been somewhat overstepped, when considered in conjunction with the restrictions contained in sections 12 and 12a of the Bank Act, it became necessary to issue a circular letter to the officers and directors of all associations, advising them and their representatives and agents, regarding the limitation of such activities, which circular letter reads, in part, as follows:

There is no occasion of real necessity for so conducting the business of a building and loan association, either in advertising or in practice, as to conflict with the provisions of the Bank Act, or to encroach upon the prerogatives of a bank or savings bank, and all associations and their representatives and agents should clearly understand that they must not advertise in the newspapers, on window signs, on letterheads or by circulars in any of the following forms:

"The acceptance of deposits;" that "We pay six (or any other) per cent on savings;" that "your money can be drawn out at any time, or without notice;" that "We pay interest (as such) for money left with us for either long or short periods;" or by the use of any other such phrase as would indicate the conduct of a banking or savings bank business; provided, that associations may use the word "interest" in connection with the issuance of "full-paid shares" or "full-paid investment certificates," due care being exercised that the bounds of propriety may not be overstepped in so doing.

Associations may also, in their discretion, use the word "savings" and be upheld in the exercise of this privilege by the Commissioner, where the same is used substantially as follows: "Invest your savings in a building and loan certificate or account," or "savings invested with us," etc. While the use of such word, when used in the above manner, is perfectly proper, yet after all there is no real necessity therefor, as the words "funds" or "surplus funds" can be used in place of "savings" and the results be equally good; the word "dividend" can be used in lieu of "interest," with even a more potent meaning, and "rate of dividend" readily takes the place of "rate of interest."

All associations and their representatives and agents, conducting or soliciting business in California, are advised and directed to withdraw and cancel all forms of advertising that conflict with the provisions of the Bank Act, or with the requirements of this circular, and to so conduct their future operations and advertising that there may be no occasion for friction to develop therefrom on the part of the banks, savings banks or banking department of the state, and thereby relieve the Commissioner from future and continual correspondence and explanation in connection therewith.

CONCLUSION.

Immediately following in the published report will be found a detailed statement of the receipts of this department, the names and addresses of the several secretaries, and the usual "Appendix" containing a condensed annual statement of the condition of each association, as of the close of its fiscal year, arranged in alphabetical order, both as to the city or town of location and to names of the associations therein, closing with the latest report of foreign associations doing business in this state.

Respectfully submitted.

GEO. S. WALKER,
Commissioner.

STATISTICAL REPORT	59

REPORT OF THE INDUSTRIAL ACCIDENT COMMISSION FROM JULY 1, 1920 TO JUNE 30, 1921.

HON. WM. D. STEPHENS,
Governor of the State of California.

DEAR SIR:

In compliance with the provisions of section 88, chapter 176, Laws of 1913, we herewith report upon the operations of the Industrial Accident Commission in administering the Workmen's Compensation, Insurance and Safety Act during the year ended June 30, 1921.

Personnel.

The Industrial Accident Commission, during the year, consisted of the following members: Will J. French, chairman; A. J. Pillsbury and A. H. Naftzger, members.

The heads of the various departments during the year were: H. L. White, secretary; J. S. Thomas, assistant secretary; F. W. Fellows and L. O. Adams, assistant secretaries (Los Angeles office); A. E. Graupner, attorney; F. B. Lord, manager Compensation Department; Dr. Morton R. Gibbons, medical director; Dr. R. W. Harbaugh and Dr. F. E. Raynes (San Francisco), and Dr. H. E. Southworth (Los Angeles), assistant medical directors; C. W. Fellows, manager State Compensation Insurance Fund; H. M. Wolflin, superintendent of Safety Department; W. P. Ratliff, statistician and superintendent of Department of Self-Insurance; R. E. Haggard, superintendent of Permanent Disability Rating Department.

Adequacy of Death Benefits.

A special feature of this report, one which will be of material assistance in the future in determining the adequacy of death benefits paid widows and other dependents under the law, is the synopsis of an investigation made of the question during the year by the Industrial Accident Commission's special investigator, which appears elsewhere in this report. It gives in detail a statistical survey of a large group of these cases and is supplemented by a study of vocational opportunities and training for women. A close perusal of the findings of this investigation will show that while the benefits given by the present law probably meet requirements of dependents in many cases, there are others where the relief falls short of what it should be; and still others in which they are in excess of needs to bring about the theoretical rehabilitation which the benefit is primarily intended to bring about.

Calls of Injured Persons.

First calls of injured persons to the rooms of the Industrial Accident Commission have steadily increased, the number approximating 300 monthly at the present time, or a total of about 3600 per year. In addition, there are many cases where disability is greatly protracted, and injured persons call frequently regarding complications which have arisen, or to seek assistance in securing weekly payments which are not

made promptly. At times controversies arise which are the subject of informal conferences. This course obviates the necessity for formal proceedings in many cases.

Commutations and Compromise Settlements.

Approval was given by the Commission to commutations and compromise settlements in 423 cases not formally adjudicated, as against 301 in the preceding year. These comprised 32 death benefit cases. Payments were made to 31 dependent widows and 47 minor children. The total amount payable to all dependents was \$137,609.34.

The total commuted payments-----	\$55,691 02
Previously paid -----	40,742 02
Remaining to be paid-----	34,168 87
	<hr/>
	\$130,601 91

The difference between the amount payable and the total of previous payments, commutations and remainder to be paid, amounting to \$7,000.43, represents interest deductions at the rate of 6 per cent per annum, as allowed by law. The large proportion of interest as compared with total paid is chargeable to the fact that in all cases where partial payments were anticipated those last falling due were taken in order that there might be no intermission in payments until the full obligations of employers and insurance carriers were discharged. Where total commutations were granted the periods covered in some instances ranged up to more than four and one-half years.

The purposes to which commuted payments were devoted are given below:

Purchase of homes-----	3
Purchase of ranch and other property to be used for homes-----	7
Purchase of hotels or rooming houses-----	3
To pay off mortgages-----	6
To repair or improve homes-----	3
To pay debts-----	3
To enable beneficiaries to return to former home-----	1
Other purposes -----	6
	<hr/>
	32

Either full or partial commutations were made in 217 permanent disability cases, in which the ratings ranged up to 95½ per cent of total. The undiscounted liability in these cases totaled \$467,838.77. The record shows:

Commutations -----	\$210,544 75
Previous payments -----	154,619 46
Remaining to be paid-----	89,698 60
	<hr/>
	\$454,862 81

The difference between the last total and entire amount payable is due to lawful interest deductions in the amount of \$12,975.96.

One hundred sixty-nine compromises were approved, the total amount involved equaling \$167,562.25. These approvals were given in many instances because questions were involved which made uncertain the outcome of formal proceedings. Some were due to neurotic conditions,

while others covered permanent injuries which had not reached a stage where the percentage of loss could be definitely determined at time of approval.

In two instances, the Commission consented to have second commutations made.

One approval covered cost of medical treatment only, one provided for payment of expenses only, while another called for monthly in lieu of weekly payments.

Below is a statement showing the nature of injuries involved in 217 cases:

Loss of members.

Multiple finger injuries to one hand, including amputations-----	30
Loss of all fingers one hand-----	7
Loss of all fingers both hands-----	1
Part or all of one finger-----	19
Hand-----	3
Arm-----	11
Leg-----	8
Foot-----	1
Toes-----	1
Both legs-----	1
	<hr/> 82

Loss of function.

Fingers-----	12
Hand-----	1
Wrist-----	6
Elbow-----	5
Shoulder-----	11
Arm-----	6
Knee-----	5
Hips-----	2
Leg-----	4
Ankle-----	13
Foot-----	4
Chest-----	1
Neck-----	1
Several fingers one hand-----	8
All fingers one hand-----	1
All fingers both hands-----	2
	<hr/> 82

Eye injuries.

Enucleation of one eye-----	19
Loss of sight of one eye-----	11
Reduction of vision-----	15
	<hr/> 45

Spine and other injuries.

Impaired hearing-----	1
Spine injury-----	7
	<hr/> 8

Compromise and indeterminate cases----- 169

The uses to which the money received through these commutations was to be devoted is shown below:

Purchase of small ranches	10
Purchase of homes	13
Auto trucks	5
Jitney automobiles	8
Business ventures	40
Property	35
Debts	28
Mortgages	12
Property improvements	5
Technical education	4

SELF-INSURANCE DEPARTMENT.

Our report for the seventy-first fiscal year showed that certificates of consent to self-insure compensation liability had been issued to 221 employers of labor in the state, with approximately 204,802 employees, and that security to the amount of \$4,275,000 had been deposited with the State Treasurer to guarantee the payment of compensation.

During the seventy-second fiscal year sixteen additional certificates were issued, covering approximately 5,625 employees, and security to the amount of \$320,000 was deposited. This brings the total number of certificates issued since January 1, 1918, to 237, covering approximately 210,427 employees, for whose protection security to the amount of \$4,307,000 was deposited with the State Treasurer.

LEGAL DEPARTMENT—FISCAL YEAR 1920-1921.

The work of the legal department during the fiscal year 1920-1921, may be divided into the following main and general classifications:

1. Defense of proceedings brought before the supreme and appellate courts to review the findings and awards of the Commission.
2. Advising with and rendering opinions to the Commission and the heads of the various departments thereof.
3. Preparation and review of legislative measures considered for or submitted to the legislature at its 1921 session.
4. Attendance on the state legislature.

The court proceedings handled during the fiscal year may best be shown by the following table:

Petitions for writs of review and writs pending action of courts on July 1, 1920	15
Petitions for writs of review filed during fiscal year	48
Petitions for writs of review denied during fiscal year	30
Petitions for writs of review dismissed during fiscal year	2
Writs of review ordered issued during fiscal year	20
Case remanded on confession of error	1
Awards of Commission affirmed during fiscal year	12
Awards of Commission annulled during fiscal year	6
Petitions for writs of review and writs pending action of courts on June 30, 1921	12
Petitions for rehearings filed by petitioners	14
Petitions for rehearings filed by respondents	2
Petitions for writs of certiorari filed with United States Supreme Court, to review decisions of state courts	2

During the fiscal year 2219 claims for compensation were filed with the Commission, and 2056 claims were decided. A comparison of figures will show that attempts to review the awards of the Commission were made in only .023 per cent of the cases in which awards were made. Furthermore, it will be seen that in only six of the fifty cases actually decided by the appellate courts of the state was the award of the Commission disturbed.

The principal cases handled by the legal department during the year were *Yosemite Lumber Company vs. Industrial Accident Commission* (S. F. 9556), *Quong Ham Wah Company vs. Industrial Accident Commission and Owe Ming* (S. F. 9090), and *E. Clemens Horst Company vs. Industrial Accident Commission and La Verne Hamilton* (S. F. 9319). These cases are particularly discussed because they present important issues of constitutional and statutory interpretation.

In *Yosemite Lumber Company vs. Industrial Accident Commission*, the constitutionality of chapter 183, Statutes 1919, was challenged. The petitioners presented many constitutional and statutory questions and the case was fully briefed and submitted to the Supreme Court in November, 1920. The matter was reopened by the Supreme Court in June, 1921, and ordered reargued on special questions. The case will be reargued at the September term, and an early decision is expected.

In *Quong Ham Wah Company vs. Industrial Accident Commission*, section 58 of the Workmen's Compensation, Insurance and Safety Act of 1917, was attacked as granting a privilege to a citizen of this state

which it denied to a noncitizen, and it was therefore claimed to be violative of section 2 of article IV of the Federal Constitution. Upon the first hearing the Supreme Court annulled the award. A petition for rehearing was filed on behalf of the Commission which was granted. On rehearing the Supreme Court held that the provisions of section 58 must be interpreted as extending to citizens of other states benefits of extraterritorial right, and that the section was invalid only in so far as it attempted to bar noncitizens. The award of the Commission was affirmed. The petitioners carried the matter to the United States Supreme Court, where the decision of the state court was upheld.

The case of *E. Clemens Horst Company vs. Industrial Accident Commission* involved section 6 (b) of the Workmen's Compensation, Insurance and Safety Act of 1917. The question presented was as to the validity of an award for additional compensation for the serious and wilful misconduct of the employer. The question involved the interpretation of the phrase "executive or managing officer" of a corporation, and the court held that such term means a person in a corporation's employ, either elected or appointed, invested with the general conduct or control in a particular place of business, and is not confined to the technical or legal sense of one elected or whose office is provided in the articles or by-laws of a corporation.

In addition to the foregoing, the legal department prosecuted proceedings for disbarment of one attorney before the appellate court and investigated several other cases of misconduct on the part of attorneys. A few attorneys practicing before the Commission do not seem to recognize the fact that "compensation" is intended for the injured man or his dependents. They seek to avoid the provisions of section 24, which vests the Commission with authority to fix fees of attorneys in compensation cases, and, by persuading ill-informed injured men to sign contracts for larger fees, seek to collect sums ranging as high as fifty per cent of the amount of the award. In most of the cases brought to the attention of the legal department, refunds of the excess charges have been accomplished.

Previous to and during the 1921 session of the legislature, a large amount of time was devoted to the preparation and investigation of proposed legislation affecting the Commission and its work. Previous to the meeting of the session a complete survey of all laws affecting the work of the Industrial Accident Commission was made. Nine bills intended to strengthen the operation of compensation and safety were drafted and presented to the legislature on behalf of the Commission, of which six were passed and became laws. Seventeen bills affecting the Commission, workmen's compensation, and safety were introduced in the legislature by representatives of other interests. Nine of these bills were particularly pernicious and would have been a severe set-back to the progress of workmen's compensation in this state had they been passed. However, only one of the seventeen bills mentioned passed the legislature and received the signature of the Governor.

COMPENSATION DEPARTMENT.

This department has just completed the most strenuous year of its existence. Previous to the last fiscal year, the increase in business (7 per centum in 1919-20), though steady, could be absorbed without difficulty. The report for the past fiscal year shows a sudden jump of $23\frac{1}{2}$ per centum—that is from 1796 to 2219 cases.

Confronted with the problem of handling this increase with the expedition and thoroughness that has come to be the recognized policy of the Commission in dealing with claims, the department was handicapped by lack of funds due to limited appropriations, which forbade an increase in personnel. However, faithful work on the part of every member of the staff, and the application of more efficient methods has made possible the handling of the greater part of the increase without undue delay in the determination of the claims of injured workmen. The time for deciding the ordinary case was 67.7 days as against 68.1 days in 1919-1920.

The explanation of the abnormal increase in claims filed may probably be found in the following three principal causes:

First—The effective work done by the Statistical Department and Bureau of Information of this Commission in bringing the attention of the injured workmen and their dependents to their rights under the Compensation Act.

Second—The increasing unemployment among the workmen of the state during the past year.

Third—Death claims filed by the state under the Rehabilitation Act.

Besides the 2056 original cases decided during the past fiscal year, the Commission disposed of 927 supplementary proceedings and approved 423 agreements for settlement or payment of lump sums. Over eight formal hearings were held each full working day to accomplish this result.

Time Consumed in Deciding Cases—July, 1920, to June, 1921.

Days	Number of cases	Per cent	Cumulative per cent	Number of days
Less than 10.....	38	1.9	1.9	141
10-20	67	3.3	5.2	1,035

Acceptance of employer.....	1				1

The compensability of hernias has always been a source of litigation both in this state and other jurisdictions. Time and precedents do not seem to correct the difficulty of settling such cases without a formal decision. The number of cases increased from 106 in 1919-1920, to 184 in 1920-1921, and decisions against applicants remained slightly over one-half.

Value of Awards in Decided Cases—July 1, 1920, to June 30, 1921.

Deaths (80 to "Industrial Rehabilitation Fund")	\$1,058,356 75
Permanent disability (13 pension cases)	352,856 95
Temporary disability	64,906 90
Temporary disability (238 continuing cases)	44,516 80
Medical	17,218 34
Totals	\$1,537,855 74

The total value of the awards of the Commission exclusive of the Rehabilitation Fund cases increased 45 per cent or \$466,006.99.

The average death award was \$3,552.95 as against \$2,866.05 in 1919-1920.

Permanent disabilities increased in value an average of \$225.06 per case, or from \$1,081.81 to \$1,306.87.

PERMANENT DISABILITY RATING DEPARTMENT.

This department has for its function the determination of the extent of permanent disability in those accidents where permanent disability occurs. This is done by referring to a schedule of permanent disabilities which has been adopted by the Commission for the purpose. This schedule considers not only the nature of the injury, but the age and occupation of the injured workman at the time of the injury. The California schedule is the only one, so far as we know, which considers the factors of age and occupation in fixing the amount of the compensation to be paid for permanent injury. It is conceded by most students and authorities of the question that disability ratings should consider the age of the injured workman in arriving at permanent disability ratings, and some authorities also admit that age is a factor also to be considered.

The work of this department has increased considerably during the past year. Whereas, formerly, the number of ratings made during the year were estimated to be about two thousand, this last year we have been rating on an average of two hundred cases per month, making an approximate total of twenty-four hundred during the year. Many of these cases are not tabulated for the statistical tables in this report. There are two reasons for this. First: Those permanent injuries which are not considered serious enough to be ratable as causing a percentage loss of permanent impairment, are not included in the tables as permanent disabilities, but are classified with the temporary disability injuries. Second: There are many cases of preceding years which are rated, and which are not included with the permanent disabilities which occur during the calendar year of 1920. The statistical tables in this report are only concerned with those permanent disabilities occurring during the year 1920. There are some cases which are rated approximately four and one-half years after the date of the original injury, or at the termination of the two hundred and forty weeks period allowed by the statute for temporary disability.

One of the most important things accomplished during the last year is the devising of a new blank form for the reporting of permanent disabilities to the eye. The old form only called for the uncorrected and corrected remaining vision based on the Snellen's readings for distance. Students of the question have recognized for some time that the tests for distance do not satisfactorily meet the situation for partial loss of sight. In conjunction with the eye section of the San Francisco County Medical Society the Commission has drawn up a form which we believe meets the requirements. This form calls for both the readings for distance and for near vision and both for uncorrected and corrected vision, and asks for a statement of the degree of blurring accompanying both near and distance vision. Other factors concerning which information is asked are impairment of field of vision, impairment of binocular vision, impairment of stereoscopic vision, dazzling, lacrimation, impairment of muscular balance and ocular fatigue. Since cosmetic defect is also considered in the rating, this

factor is also mentioned. The blank also asks if the correction provided is practicable for the patient's occupation.

We have not yet received reports enough on the new form to enable us to work out any statistics. The reports we have received, however, show that there are very few cases of partial loss of sight in which there is not some degree of blurring. It is our belief that the degree of blurring is an important factor to be taken into consideration in rating eye injuries.

The ratings for all injuries are based upon the reports of the attending physician. These reports are reviewed by an assistant medical director of the Commission's staff. The purpose of checking the medical reports is threefold: First, to see that the case is not sent in for rating before all possibility of further improvement has been exhausted, either through treatment, therapeutic methods, or by use; second, to see that the disabilities described in the reports include all the disabilities arising from the injury; third, to see that the description of the disability is definite and accurate enough for purposes of rating.

In those cases too far away from the San Francisco or Los Angeles offices for personal examination by our medical directors, a card is sent the injured workman with the doctor's description of the disability, and the workman is asked to describe in his own words, the nature and extent of his permanent disability. When there is a discrepancy between the injured workman's statement and the doctor's statement, the doctor is asked for definite information on this point. When the report has been approved by the medical director for rating, it is referred to the rating expert to determine by the rating schedule the proper percentage of permanent disability.

The following tables summarize the results of the work of the assistant medical director:

(1) SAN FRANCISCO OFFICE.

1. All disabilities not mentioned-----	248
2. All disabilities not mentioned and too early for rating-----	2
3. Too early for rating-----	5
4. Disabilities mentioned but inadequate description-----	86
5. Surgeon's report and findings in this office substantially the same----	523
6. Applicant requested to call but failed to do so-----	16
7. No report from surgeon-----	48
8. Additional information requested and obtained from surgeon-----	1
Total -----	929

The purpose of the above examination is to make a comparison between the report of the attending surgeon and the findings in this office.

(2) OUTSIDE CASES.

1. Cards returned -----	403
2. Cards not returned-----	98
3. No card sent-----	102
4. Additional information requested and obtained from surgeon-----	57
Total -----	660

In the above cases a card of inquiry is sent to the applicant so that he may give us a description of his disability, for comparison with the attending surgeon's report.

If there is any marked difference in the two reports the matter is taken up by correspondence in order to clear up any apparent discrepancy, and to determine whether or not a further examination is necessary.

(3) LOS ANGELES OFFICE.

1. All disabilities not mentioned-----	95
2. Surgeon's report and findings in Los Angeles office substantially the same -----	494
3. Disabilities mentioned but inadequate description-----	67
4. Applicant requested to call, but failed to do so-----	9
5. No report from surgeon-----	2
6. Approved without examination-----	65
7. Cards sent and returned-----	5
8. Cards sent, not returned-----	3
Total -----	740

There are, altogether, three hundred and eighty-three more cases in this year's report over the report of last year, divided as follows:

1. Examined at San Francisco office-----	66
2. Outside reports -----	73
3. Los Angeles office-----	244
Total -----	383

REHABILITATION DEPARTMENT.

The Rehabilitation Department placed the first men in school in April, 1920, and continued placing men until April, 1921, when, due to shortage in funds and uncertainty as to whether or not the constitutionality of chapter 183 of the Laws of 1919 would be sustained, it was deemed advisable not to add new names to the list. Shortly after the Rehabilitation Law went into effect on July 22, 1919, it became apparent that the constitutionality of the act was to be tested. This fact retarded payments into the fund and, as the attack on the law progressed, more and more of the employers and insurance carriers sought to delay payments until a final decision by the courts. This condition resulted in the collection of approximately 25 per cent of the amount that should have been collected and the consequent placing of men for the short period mentioned above. We are, therefore, only able to report on approximately one year's work.

In addition to the beginning of actual rehabilitation work, there has been established, during this year, an office in Los Angeles to carry on the work in the southern part of the state. Below is given a brief summary of the work done through that office:

Total number of cases on file (1916-1921)-----	512
Total number of cases in investigated file-----	334
Total number of cases in uninvestigated file-----	178
Total number of cases open for further consideration-----	255
Total number of cases considered this year-----	199

Communications were mailed in the balance of the cases not considered this year and we either received no reply from same or the communications were returned to us as unclaimed.

Total number of cases disposed of this year-----	157
Total number of cases in which lump sums were granted-----	19
Total number of cases where no further rehabilitation was necessary because of the injured man's return to his former wages-----	138
Total number granted rehabilitation courses-----	5
Total number in school at present date-----	4
Total number having completed course-----	1

No payments have been made on two of the cases which are in school at the present time.

Rehabilitation Cases in San Francisco Office.

The remaining portion of this report is concerned with the work of the San Francisco Department of Rehabilitation.

This department has come in contact with many cases other than those to which rehabilitation training has been given. At the present time we have five hundred ninety-one uninvestigated case in our files. To all of these form letters, inclosing a self-report to be filled out and returned to this office, have been sent. Those who indicate that they are interested in rehabilitation work are asked to call at the office. Any questions regarding compensation or medical treatment are referred to the proper departments.

During this year we have investigated four hundred ninety-one cases and have disposed of ninety-three cases for the following reasons: Fifty have returned to work and are getting along very well; five have gone into business for themselves, for example, a small grocery store or a rooming house; three are not working, but are able to resume their former occupations; three are unable to work, and also unable to take up any rehabilitation work because of their physical disability; fourteen have left the state, returning to their homes; seven are too old for reeducation and will have to find some light occupation; two have died; three were judged not to be industrial accident cases; six could not be located.

The major portion of the work of this department has been done on three hundred ninety-nine of the four hundred ninety-one investigated cases now in our files. Personal interviews, looking toward reeducation, should be obtained in the other ninety-two cases, but because they are scattered throughout the state and too far from San Francisco, it has been impossible for the investigator to see them.

Included in the four hundred ninety-one cases is the group of ninety-five rehabilitation cases. It will be of interest and of value to study carefully these ninety-five cases. Of the men we have placed in school, thirty-two have discontinued their work, forty-one are still under training, and twenty-two have completed their courses.

We have divided the discontinued cases into two groups, those who gave up the work permanently, and those who expect to return to complete their courses. In this latter group are ten; five had to return to the hospital for further medical treatment; three found that for the present their work demanded all their time (15); and two had other reasons (25). In the remaining twenty-two who discontinued the work permanently, was a group of four illiterate foreign-born men (4, 21, 28). It was, in the first place, very difficult to interest them in rehabilitation work, though no group was more in need of training, and they were discouraged and gave up the work upon encountering the first obstacle. One of the twenty-two stopped to accept a good position (14); one had a comfortable income for life from private insurance which made it unnecessary for him to work or to complete the training (11); one was decidedly incompetent (26); five moved away (6, 8, 13); five lost interest and felt that they could get along just as well without the training (31); two were not well enough (23, 27); one woman married; and for two, the reasons given were indefinite (29).

Of the forty-one who are now under training, twenty-two are spending all their time on their schooling (1, 2, 24); four are attending part time, eight of them going to night school (7, 16); seven are taking correspondence courses (30, 34).

In dealing with a group of men whose education and occupations have been so different, the question naturally arises, "In what lines have these men been placed?" We have placed our men in twenty-seven different schools or with private instructors. The largest number

[Editorial note: The numbers in parentheses refer to the numbered sketches describing the rehabilitation students in the Annual Report of 1919-1920 of this Commission. All arrangements had been made for number 33 to start his training, but he changed his mind and after the report went to print we learned that he had not started.]

in any one school was thirteen. This school, however, offered instruction in many lines of work. The next largest group was eleven, and they were in an automobile school. As would be expected, the courses have been varied.

- 21 chose various automobile courses.
- 27 chose commercial work.
- 14 chose drafting or engineering.
- 2 chose to learn the barber trade.
- 2 chose poultry raising.
- 1 chose chemistry.
- 1 chose engraving.
- 7 chose watchmaking.
- 1 chose Spanish.
- 1 chose photography and English.
- 1 chose radio operating.
- 1 chose manicuring and hairdressing.
- 4 chose mechanical dentistry.
- 5 chose English.
- 6 chose elementary mathematics, English, and spelling.
- 1 chose music.

95

Of the ninety-five cases, nine were given correspondence courses. In general, we have not approved of correspondence courses, for it is a very difficult way to study and most of the men have been out of school many years and have had, on the average, only about seven years' schooling. However, in seven of the cases the men lived in places inaccessible to schools, and in two cases the men were so crippled that it was physically impossible for them to attend school, but they were glad of the opportunity to study at home.

Up to date we have spent \$13,710.46, and estimate that it will cost \$3,818.37 to complete the training of those who are now in school and of those who have now discontinued, but who expect to return and complete their courses. This makes an estimated total cost of \$17,528.83 for ninety-eight cases. (The figures include the cost of three Los Angeles cases.)

We list the expenditures in each case under three headings: Tuition, supplies and other expenses. In twenty-two cases the Commission has allowed something in addition to paying tuition and for supplies. In most of these cases it was a regular payment each week to supplement the compensation or to take the place of compensation which had all been paid, thus making it possible for a man to complete his course of training, which otherwise he could not have done. The amount allowed varies from \$4.25 a week to \$20 a week. Four have been given railroad transportation or carfare.

Any conclusions as to the value of rehabilitation to injured employees must be drawn from completed cases. We have thought it wise to give here a brief summary of each completed case:

I (17).

This is a young married man, twenty-seven years of age, with a wife and baby to care for. He was working as a ship fitter's helper at a wage of \$25.84 a week and scratched the back of his hand. It became infected, and later the major arm had to be amputated at the shoulder joint. He was given a permanent disability rating of 57 per cent, or compensation for two hundred twenty-eight weeks. He had only a

grammar school education, but was eligible for a special course in poultry husbandry at the state farm at Davis. After spending two months there, he made application for a commutation of part of his compensation to purchase a small ranch and planned to go into the chicken business.

Tuition, \$20; expenses, \$100.17; total, \$120.17.

II (3).

This woman was working as an elevator operator at \$15 a week when she received an injury which resulted in practically complete immobility of the left knee joint and limited motion of the ankle joint. She was given a permanent disability rating of $21\frac{3}{4}$ per cent,* or compensation for eighty-seven weeks, paid at the rate of \$9 a week. She is forty-two years of age and has a child, twelve, to support. Her education is equivalent to two years in high school. When she had recovered sufficiently from her injury she took a two months' course in manicuring and hairdressing, and is now doing well in a beauty shop of her own.

Tuition, \$50.

III (19).

The subject here described is a married man, forty-two years old, with a wife and child to support. He was working as a laborer at \$20.50 a week when he injured his back. While he was still receiving medical treatment he started a course in watchmaking and immediately after completing the six months' course he took a position at \$30 a week, with promise of a raise in a short time. He was under medical treatment for several months after returning to work.

Tuition, \$125; supplies, \$160.70; total, \$285.70.

IV (12).

At the time this man was injured he was thirty-six years of age, was single, and had no one dependent upon him. He was working as a ship rigger at \$45 a week when he met with an injury, fracturing the major shoulder. His education was limited to the fifth grade, and a course in auto mechanics and oxyacetylene welding was his choice. His instructors gave very encouraging reports on his progress, but since completion of the course he seems to have been unable to hold a job. He complains of continual pain in his shoulder and this is largely responsible for his idleness. It appears to the medical authorities that he is a malingerer as they can not find any cause for his complaints.

Tuition, \$159.99; supplies, \$7.75; expenses, \$255; total, \$422.74.

V.

The subject of this sketch is forty-two years of age, is single, but supports his mother. He went through the third grade in school and worked as a teamster for many years. As a result of his injury, he lost a part of his ear and suffered a sprained right shoulder. For this he was given a permanent disability rating of $10\frac{1}{2}$ per cent. He was earn-

*Rerated since last year's report.

ing \$30 a week and compensation was paid at \$18.52 a week. He spent two months learning the barber trade. As soon as he had finished the course he got a position in a barber shop, starting with a wage of from \$18 to \$20 a week.

Tuition, \$50.

VI.

While working as a laborer for \$15 a week, this man was hit by the boom of a derrick and fell from a stack of hay, the injury resulting in the flattening of the arches of both feet. He was given a permanent disability rating of $26\frac{3}{4}$ per cent, or compensation for one hundred seven weeks, which was paid at the rate of \$12.96 a week. At the time of the injury he was forty-seven years of age, single, and had no one dependent upon him. He had a grammar school education and was interested in tractors and gas engines. He took a three months' course in the operating and repairing of tractors and gas engines and has now gone out into the country where he expects to get work as a tractor operator.

Tuition, \$90; expenses, \$82.50; total, \$172.50.

VII.

The man described here was a brakeman, thirty years of age, when, as a result of an accident, his left foot was amputated at the tarsus. For this injury the rating was $30\frac{3}{4}$ per cent, or one hundred twenty-three weeks' compensation at \$12.23 a week. The barber trade appealed to him and upon the completion of a four months' course he started into business for himself.

Tuition, \$85; expenses, \$225; total, \$310.

VIII (9).

This man, forty-three, was a lineman earning \$36 a week. He fell twenty-five feet and the injury resulted in limited motion of the thumb and all the fingers of the major hand and partial immobility of the minor thumb. A $14\frac{3}{4}$ per cent disability rating was given and compensation paid at the rate of \$20.83 a week. With a grammar school education as a foundation, he began taking an automobile engineering and oxyacetylene welding course. It took six months to complete the work. The school found a job for him in a garage, but he could not agree with his boss and gave up the work. He is now out of a job.

Tuition, \$254.99; supplies, \$18.25; total, \$273.24.

IX (18).

This twenty-one-year-old young man has gone only as far as the fifth grade in school. While working as a laborer in a lumber yard at a wage of \$22.50 a week, he sustained an injury which resulted in the amputation of the right thumb through the proximal phalanx and amputation of index and middle fingers at middle joints. In our first interview with him he was not interested in reeducation. At that time he was working and making forty cents an hour. Shortly after, he lost his job and came to us asking for a course in auto mechanics. This

was given to him. He also took English and arithmetic part of the time. He spent seven months on his rehabilitation work, and then went to work as a truck driver.

Tuition, \$191; expenses, \$13.10; total \$204.10.

X.

While trimming lumber this boy's hand came in contact with the trimmer saw, and his minor index, middle and ring fingers were amputated at the second joints. He was employed as a laborer and earned \$35.04 a week. The permanent disability rating given in this case was 23 per cent, entitling him to compensation for a period of ninety-two weeks at \$20.83 a week. At the time of the accident he was sixteen years old and had no dependents. He had spent two and one-half years in high school and desired a commercial course. The regular course required six and one-half months to complete and he returned for one month to take advanced bookkeeping. He has been offered a position as bookkeeper in a garage.

Tuition, \$92.50; supplies, \$15.30; total, \$107.80.

XI (10).

This young man is a Slav, twenty-three years of age, and single. He was injured while at work as a ship carpenter's helper. His wage was \$27 a week. The injury resulted in osteomyelitis and united fracture of the left humerus, musculo-spiral paralysis, united fracture of both bones of the forearm, with locking of both bones. He is still receiving medical treatment and is drawing compensation of \$16.67 a week. We placed him in a commercial school where he specialized in bookkeeping for eleven months. He is to take a position as bookkeeper and interpreter in a Slavic bank.

Tuition, \$235; supplies, \$3.85; total, \$238.85.

XII.

While employed as a millman this man was starting an engine and it backfired and threw his arm into the crank shaft. The permanent disability resulting from the accident was the loss of the minor arm above the elbow joint; complete paralysis of the minor shoulder girdle; paralysis of deltoid and posterior scapula muscles of major arm, with one-fourth loss of strength in flexion, adduction and total loss of abduction. The rating given was $68\frac{3}{4}$ per cent, equivalent to two hundred seventy-five compensation weeks. The rate of compensation was \$14.52 a week. At the time of the accident he was twenty-five years old, and since then has married. He took a three months' course in ignition, carburetion, and electric wiring of automobiles and has returned to his home in a small town to open an automobile repair shop. He will hire a mechanic to do the heavy work.

Tuition, \$90.

XIII (32).

This young man was twenty years old when he severed the nerves of the major arm. He was working as a dodger on a carriage in a saw-mill at a wage of \$24 a week. Compensation amounts to \$14.48 a week.

Before the injury he had completed grammar school and has since taken a six months' course in bookkeeping. Just as he completed the course he suffered a nervous breakdown and has been unable to work.

Tuition, \$97.20; supplies, \$14.50; total, \$111.70.

XIV.

The subject of this sketch is an Italian. He was a miner, earning \$21.49 a week. While at work he fell fifty feet to the bottom of a chute, fracturing the first and second lumbar vertebra, resulting in paralysis of the lower extremities. He has no use of the right leg, but is able to stand on the left, and gets around with crutches. The kidneys and bowels were involved also. He is entitled to compensation at \$13.95 for two hundred forty weeks and to a pension of \$8.60 a week for the rest of his life under the 100 per cent permanent disability rating given in his case. At the time of the injury he was twenty-eight years old and had no dependents. During the four years he was in the hospital he learned to speak and write English and later repaired the clocks there and sharpened the surgeons' instruments. He became so interested in the work that we encouraged him to take a course in watchmaking and watch repairing. Now, after seven months training, he is qualified as a watch repairer and gives promise of being an expert. He expects to have a position in two weeks.

Tuition, \$155; supplies, \$276.43; expenses, \$310; total, \$741.43.

XV.

This man was a gasmaker. Some hot iron dropped from a machine striking his right leg and resulting in third degree burns of the right leg at the ankle joint, for which he was given a permanent disability rating of $19\frac{1}{4}$ per cent, or seventy-seven weeks' compensation at \$20.01 a week. He was thirty-five years old, single, and had no dependents. His education was limited to the fifth grade, but he took a three months' course in gas engines and tractors and has gone out into the country to look for work operating and repairing tractors.

Tuition, \$90.

XVI.

When this man was riding on the rear platform of an air engine, the engine crashed into a small car, crushing his legs and feet. Because of this, he suffers severe limited motion of both ankle joints, and was given a permanent disability rating of $27\frac{3}{4}$ per cent, or one hundred eleven compensation weeks, to be paid at \$19.24 a week. This was based on a monthly wage of \$135. He was employed as a patrolman by a powder company. He is thirty-two years of age and divorced, but has a seven-year-old boy to support. Automobile work appealed to him and he has just completed a six months' course in auto mechanics, but has not yet taken a job.

Tuition, \$180.

XVII (5).

This young man is of Italian parentage, but American born, and speaks very good English. At the age of sixteen he met with an injury which resulted in complete loss of flexion of distal and mid-phalangeal joints of major index finger, limitation of flexion of middle, ring, and little fingers. He has received a rating of $18\frac{3}{4}$ per cent disability, or compensation for seventy-five weeks. As his education was limited, he was given a course in English and arithmetic, which he did not complete, and also a course in automobile ignition and carburetor work. Since the completion of the six months' course he has been unable to find work because of the present industrial conditions.

Tuition, \$83

XVIII.

This subject is a man, sixty-seven years of age, with a wife and daughter dependent upon him. He was employed as a timekeeper when, in an accident, the neck of the right femur was fractured, resulting in one inch shortening, with considerable outward rotation of the lower fragment; limited motion of the hip joint; slight loss of flexion of the knee joint. He was given a 44 per cent disability rating, or compensation for one hundred seventy-six weeks. Based on a monthly wage of \$150 and board, compensation amounts to \$20.83 a week. He is a college trained man and has held good positions, but he was not familiar with the present methods of bookkeeping and accounting. He took instruction for three months from a private teacher, but has not yet started to work. Present industrial conditions, and his age, are largely responsible for his idleness.

Tuition, \$60.

XIX.

This is a single man, thirty-seven, who supports his mother. He was earning \$60 a week as a shingle sawyer and was hurt while making an adjustment on a machine when the carriage started. The injury resulted in limited motion of the major middle and ring fingers. For the injury he was given a $15\frac{3}{4}$ per cent disability rating, allowing him compensation at the rate of \$20.83 a week for sixty-three weeks. He had completed the seventh grade in school and was anxious to improve himself during the three winter months when things were slack in the industry. Construction drafting was his choice. He has now gone back to work as a saw filer in the lumber mills, beginning with a wage of \$5 a day. He will later take more advanced work through correspondence courses.

Tuition, \$90.

XX. (20).

This man is a very bright, intelligent Italian, twenty-nine years of age, who speaks fairly good English. He injured his right leg working in a mine. The femur was broken about four inches below the hip joint, and resulted in a practically stiff knee, stiff ankle, toe drop of all the toes, and one inch shortening of the leg. A rating of $37\frac{1}{2}$ per cent

disability, or one hundred fifty compensation weeks, was made in this case. Compensation amounts to \$15.13 a week. While he was still receiving medical treatment, and nearly a year before the bill providing funds for reeducation had been passed, this man had taken part of his compensation in a lump sum to pay his tuition in school. He attended an automobile school for four months and in two months more would have completed the course but, unfortunately, he had to return to the hospital for an operation on the nerves of his legs. Since then he has started a course in English and has completed the automobile course. The commission has paid for the entire course, refunding to him the amount he had previously paid. Because it was so difficult to find employment in automobile work here, he has returned to the mining district where he was hurt with the expectation of finding employment there in the line of work for which he has trained.

Tuition, \$211; supplies, \$12; total, \$223.

XXI (22).

The subject of this sketch is a man, fifty-eight, with a wife and three dependent children. He was a carpenter by trade and while at work injured the vertebræ in his back, and is drawing compensation of \$20.83 a week. He is working as a truant officer in one of the valley towns, and took up a six weeks' course in Spanish so that he would be able to converse with the Mexican parents and children in the community.

Tuition, \$30; supplies, \$5; total, \$35.

XXII.

This seventeen-year-old boy was a press operator, earning \$21.50 a week. His left arm was caught between the jaws of the press, necessitating amputation three inches below the elbow joint. A permanent disability rating of 39½ per cent, or one hundred fifty-seven weeks compensation at \$20.83, was given him. He had gone to high school for one year and thought that a business course would be of great benefit to him. As soon as he had finished the nine months' course he took a position as bookkeeper and salesman, with a salary, to begin with, of \$100 a month.

Tuition, \$122.65; supplies, \$13.52; total, \$136.17.

For the twenty-two completed cases the average cost was \$203.24, and the average length of course was five months.

When we placed these men in school we undertook to fit them to return to work at a fair wage, but mere training is not enough. They must have jobs. At the present time unemployed men are so numerous that it is difficult for anyone to find a job. Under the most favorable of circumstances it is hard to persuade an employer to hire a disabled man. Now it is almost impossible. An influential agency is a necessity and the logical place for a placement bureau is in the rehabilitation department. It should serve not only rehabilitation students, but all injured employees. The few completed cases listed above illustrate

vividly the point that the work of the rehabilitation department will never be entirely satisfactory until such a bureau is functioning.

Placement training goes hand in hand with rehabilitation work, but because we did not have a placement bureau scarcely anything has been done along that line. However, two men who were nearly blind have been placed in a school for the blind where they are learning to do blindcraft work and earn money at the same time.

The period of time elapsed since the completion of the courses is too short to judge accurately the outcome of the cases. The lack of facilities for placing the men has been a serious handicap. The brevity of the summaries leave out entirely the change of attitude and the resulting contentment, which are of no small importance. Withal, one feels that rehabilitation work is exceedingly worth while and it is indeed disappointing to be unable, for want of funds, to give any assistance to the twenty-five men who are now waiting to start courses of training.

INVESTIGATION OF DEATH BENEFIT CASES.

The work of investigating death benefit cases and rendering service to dependents has continued throughout the year 1920-1921. In addition to the regular routine we have made two notable studies: *First*, a detailed statistical survey of a large group of cases in which death benefits were paid; *second*, a study of vocational opportunities and training for women. The Commission took another step toward better service to dependents, when it established in the Los Angeles office a special agent whose duty it is to cover death benefit cases in the southern counties.

In our regular routine we have visited this year a total of three hundred forty-two families of men killed in industrial accidents. Of these visits two hundred thirty-four were routine investigations, and involved a friendly visit which assured the family of the Commission's continued interest and which secured for us the necessary information for statistics. In the one hundred eight cases we performed services so varied that it seems of interest to list them.

At the request of the Secretary or the Compensation Department we investigated and made recommendations on ten requests for commutations of compensation to buy property. These were the requests of dependents who preferred to put a lump sum into a home rather than let compensation payments take their usual course.

In twenty-one death benefit cases the dependents applied to the State Board of Control for half-orphan aid. These applications were made either because the compensation payments had run out or because they were too small to live on. At the request of the State Board of Control we made investigations and recommendations in these cases.

Six families of dependents asked that compensation payments be increased even though the compensation period was thereby shortened and interest deducted. We investigated and made recommendation in these cases of insufficient compensation.

Generally we do not follow up a case until after compensation payments have been started. However, we have made visits to six families before the right to compensation was established. Two of the cases were reported to us by the State Board of Control as possibly entitled to compensation. The other investigations were made at the request of the Bureau of Information of the Commission.

In three cases the routine visit brought to light unsatisfactory guardianship arrangements under which children who received compensation were living. We made complete investigations, with the result that in one case the guardianship was changed to conform to our recommendation, in one case an adjustment was made without necessitating a change in guardianship, and the third case was placed in the hands of the proper county authorities.

We have requests from dependents for many kinds of information. Sixteen widows wanted to know what kinds of jobs they could fill, and where to find them. We were able to find definite work for four of them, and the rest we referred to whichever cooperating employment bureau was most interested in the particular type of woman.

We obtained schooling information for nine widows. Two of them wanted to learn English and the others asked about trade schools.

In six cases we obtained and sent out information concerning clinics, their hours and location. One of these cases was that of a boy who had been judged partially dependent upon his deceased father. His compensation had run out, he was in a serious tubercular condition, and was sleeping in a corner of a garage and eating when and where he could find a friend kind enough to feed him. We sent him to the anti-tuberculosis clinic with a card of introduction. They examined him and sent him immediately to the tuberculosis ward of the San Francisco hospital where he is receiving expert attention.

We found two families whose compensation payments had run out and who were living in abject poverty. Both had been only partially dependent upon the deceased, but through sickness and age were unable to care for themselves. We reported them to the proper authorities and obtained regular aid for them.

In thirty-one cases we obtained and sent to dependents information on miscellaneous matters too varied to tabulate.

In January, 1921, we made a detailed study of all dependency records which we had handled. The purpose was to secure definite information as to what effect the death of the breadwinner and the substitution of compensation for wage had had on the standard of living of the persons left dependent. To this end we made a comparative study of conditions in the family at the date of death of the breadwinner and at the date of investigation. It should be noted that the only study of which we could find record which is in any way comparable is one made in 1918 under the Bureau of Labor Statistics. This had a totally different purpose.*

The information obtained from this study was used as a basis in formulating the death benefit schedule embodied in Senate Bill No. 259 introduced at the last legislative session. We presented comparative tables of statistics in a pamphlet circulated at that time and entitled "A Rational Death Benefit Schedule." We are reproducing those tables here, with some explanation of each table, for several reasons: *First*, we believe that these tables give a definite index of the inadequacy of the present death benefit provisions; *second*, they form a valuable contribution to the available statistical information concerning dependency; *third*, the tables should be made available for a larger number of people than the pamphlet reached; *fourth*, a future study along similar lines will be made of a larger number of cases.

We have handled a total of 1438 cases. Of these, six hundred seventy-four were investigated and studied, fifty-eight were investigated but not included in the study, and seven hundred six were, for various reasons, dropped without investigation.

Of the seven hundred six dropped cases, four hundred fifty were not compensable under the terms of the act; in one hundred fifty-four cases no dependents were left; in eleven the insurance companies were insolvent, and not paying compensation; eighty-two could not be located, and in nine the dependents were dead. For various reasons fifty-eight cases were investigated but not studied. In twelve of these insufficient

*United States Bureau of Labor Statistics, Bulletin 217.

time had elapsed between death and investigation to provide definite basis for judgment as to the adequacy of compensation. In seventeen cases the insurance company was insolvent and not paying. In fourteen cases awards had been made, but on appeal they had been judged not compensable, and in fifteen the investigators were not able to get information enough to make them of value in the study. That left a total of six hundred seventy-four cases which received compensation according to the terms of the act, and which were studied so as to show the whole circumstances of the family at the time of the investigator's visit as compared with circumstances at the time the breadwinner was killed. On an average twenty-nine months elapsed between these two dates.

Most of these cases were those of families which were totally dependent for support upon the deceased workman. Of the six hundred seventy-four cases, 84.42 per cent were those of persons totally dependent, while in 13.20 per cent an award was made to persons partially dependent. In 2.37 per cent the circumstances were unusual, and the award was divided between two persons totally dependent, but not in one household; for instance, a wife and a mother, a wife and a child by a former marriage, etc. In two hundred thirty-three cases or 34.57 per cent the compensation period had been completed by the time the investigator visited, and the death benefit was entirely paid. In four hundred forty-one cases the families were still receiving compensation. Table I shows the degree of dependency according to the number of cases in which compensation had been completely paid, or was still being paid at the time of the investigator's visit.

TABLE I.

Table Showing Degree of Dependency of 674 Cases; also Number of Cases in Which Compensation Has Been Completed, and Number Still Being Paid.

Degree of dependency	Total number of cases	Number of cases in which compensation has been completed	Number of cases in which compensation is still being paid
Totally dependent	569	164	405
Partially dependent	89	65	24
Divided, i.e., total and partial.....	16	4	12
Totals	674	233	441

In the six hundred seventy-four cases there were at the time the men were killed, 1686 dependent individuals. Table II shows how these individuals were related to the deceased, and the difference in the number who were dependent at the time the investigator called as compared with those left dependent at the time of death. Changes which took place among widows and children are shown in detail in Tables IX and X.

TABLE II.

Comparative Table Showing Total Number of Dependents and Their Relationship to Deceased Workman; Taken at Date of Injury and at Date of Investigation.

Relationship of dependents to deceased	Total number of dependents	
	Date of injury	Date of investigation
Wife	531	522
Child	913	815
Father	47	42
Mother	94	88
Brother	30	24
Sister	50	41
Nephew	7	5
Niece	6	6
Grandchild	5	3
Relatives in law	3	3
Totals	1,680	1,549

In a group of cases as large as this there are certain natural classifications which come to mind at once. Compensation is paid not so much to an individual as to a family, and we have first grouped our cases according to the size of the family. One hundred and sixty-two men left a widow only; three hundred fifty-five, or 52.67 per cent, left a widow and one or more children; and one hundred fifty-seven left family groups made up of other relatives than a widow, or a widow and children. The largest group, that of a widow and children, is divided in Table III according to the number of children in the family.

TABLE III.

Table Showing Size of Families, Consisting of Widows and Children; Taken at Date of Injury to Deceased.

Widow with one child	134
Widow with two children	87
Widow with three children	71
Widow with four children	31
Widow with five children	10
Widow with six children	13
Widow with seven children	7
Widow with eight children	1
Widow with nine children	1
Total	355

Having in mind the fact that 76.70 per cent of the six hundred seventy-four cases consisted of widows, or widows and children, it is necessary to consider first the age factor. A woman's ability to readjust herself to changed condition, her power to assume responsibility, and her value as a potential wage earner, all depend to some extent on her age. Table IV shows in ten-year groups, the ages of all widows at the time they lost their husbands, and at the time of the investigation. It will be noticed that the largest group at both times lies between thirty and forty years of age, and the next largest lies between forty and fifty. In general, then, these women are mature. Their days of education and training are probably over, their habits and mode of living have become fixed to a certain extent, and they are past the age when sudden change is easy or desirable.

TABLE IV.

Comparative Table Showing Age of All Widows at Date of Injury, and Date of Investigation.

Ages Shown in Ten Year Groups.

Age of widows	Total number of widows	
	Date of injury	Date of investigation
Under 20 years.....	8	1
20-29 inclusive.....	120	91
30-39 inclusive.....	178	176
40-49 inclusive.....	133	148
50-59 inclusive.....	70	77
60 and over.....	22	29
Totals	531	*522

*Nine died.

Given a group of three hundred fifty-five widows, with children, and finding that their average age is 36.4 years, one expects that there will be a large group of young children, and the figures bear out this expectation. According to the school law of California, children between six and sixteen are supposed to be in school. We have shown the children in five-year groups except for the number between sixteen and eighteen years of age, feeling that it was easier to picture them that way than within narrower limits. At the time of death of the employee, the largest number of children were under six years of age. By the time of investigation some of these had passed the five-year line but even then one hundred ninety-seven, or 24.17 per cent, were under school age. Remembering that the compensation period is about four and one-half years, one reads Table V with the question, "But what will these children do when compensation ceases?"

TABLE V.

Comparative Table Showing Ages of Dependent Children at Date of Injury, and at Date of Investigation.

Age of dependent children	Total number of children	
	Date of injury	Date of investigation
1-5 inclusive.....	308	197
6-10 inclusive.....	265	265
11-15 inclusive.....	244	260
16-17 inclusive.....	71	79
18 and over.....	25	14
Totals	913	*815

*Difference in totals due to number of children who ceased to be dependent. See Table XI.

Very closely allied to age, and perhaps even more important, is the question of health. Visiting case after case, the investigators gathered the impression that the widows and children were not as well at the time of investigation as they were when the workmen were killed. There seemed to be a general, though slight, lowering in the physical well-being of the survivors, and one wondered if the figures for the whole group would bear out the theory. Unfortunately, Tables VI and

VII, which follow, show this to be actually the case. We have not asked for medical reports, but have relied on the statement of the individual and the judgment of the investigator. "Good health" is self explanatory. "Total temporary disability" means severe illness, a broken leg, or some other temporary circumstance which is at the time totally disabling, but which will not prevent future self support. "Partial disability" may be temporary, or may be permanent, but is merely a handicap rather than a totally incapacitating circumstance. Slight lameness, a crippled hand, slight chronic heart trouble, etc., are examples. In the group of "permanently totally disabled" we have counted only those who, by reason of severe chronic illness or other circumstances, were totally incapacitated from self-support and would probably so remain. Incurable insanity, total blindness, severe tuberculosis, etc., are examples. Table VI shows the health of all widows at the time of the death of the deceased, and at the time of the investigator's visit. At the later time there is shown a decrease of 6.9 per cent in the number who were at first in good health. This is accounted for by the increase in the number of partially disabled and totally permanently disabled. These groups show an increase of 5.46 per cent and 1.70 per cent respectively.

TABLE VI.

Comparative Table Showing Health of Widows at Date of Injury to Deceased, and at Date of Investigation.

Health of widows	Total number of widows	
	Date of injury	Date of investigation
Good health -----	374	348
Totally disabled—temporary -----	35	14
Partially disabled -----	103	132
Totally disabled—permanent -----	19	28
Dead -----		9
Totals -----	531	531

The figures showing the health of children are not quite so discouraging. The sharp decrease in the number in good health is partly accounted for by the number of children who ceased to be dependent.

TABLE VII.

Comparative Table Showing Health of Dependent Children at Date of Injury to Deceased, and at Date of Investigation.

Health of dependent children	Total number of dependent children	
	Date of injury	Date of investigation
Good health -----	867	763
Totally disabled—temporary -----	7	8
Partially disabled -----	26	29
Totally disabled—permanent -----	13	15
Dead -----		11
Totals -----	913	*826

*Difference in totals due to number of children who ceased to be dependent. See Table XI.

Housing arrangements are a vital factor in our study of standard of living. In normal American family life, one family group carries on an existence as a household separate and distinct from each other family group. This arrangement is only abandoned for the most pressing economic or moral reasons, and the principle that individual family life is the normal and the ideal is so well established that we find it recognized in treatises on children's problems, and read that a large percentage of delinquency among children can be traced to "broken homes." We have, therefore, studied the housing arrangements of our six hundred seventy-four families, and show in Table VIII the changes which took place after the death of the breadwinner. It is both serious and startling to find a decrease of 28.9 per cent in the number of those families which carried on a separate family life. Of the twenty-three more families which are counted as having scattered, three groups of children were in orphanages, two were being boarded out by public agencies, two had been adopted, and the other family groups were divided among relatives, friends, etc.

TABLE VIII.

Comparative Table Showing Housing Arrangements of Dependent Families at Date of Injury to Deceased, and at Date of Investigation.

Housing arrangements	Total number of families	
	Date of injury	Date of investigation
Maintaining separate household.....	637	442
Living with relatives.....	28	169
Living with other families.....	4	35
Family scattered	5	28
Totals	674	674

The next factor to be discussed comparatively is that of occupation. At the time of death five hundred eleven out of five hundred thirty-one widows were housewives, fifteen were employed outside their homes, and five had no occupation. These five were all invalids. At the time of investigation only three hundred thirty-two were housewives, one hundred fifty-six were employed outside the home, and thirty-four were without occupation. Nine had died. There is a 35 per cent decrease in the number of housewives between the two dates. We find also a 27.07 per cent increase in the number of women earning wages at the date of investigation over the number at the date of injury to the deceased. This might be a most cheering figure if we could be sure that the increase in the number of wage earners represented widows who had no children. This is unfortunately not the case. One hundred of the three hundred fifty-five widows with children were engaged in work outside the home at the time of investigation and only eight at the time of death. It is a recognized principle in California social legislation that a woman with children is performing a greater service to the state by caring for her children at home than by engaging in industry, and the fact that these one hundred mothers have had to leave their homes in order to supplement the death benefit with their earnings is a grave charge against the

existing act. A table showing the occupation of wage earning women at both dates may be of interest. We have used the occupational divisions recognized by the United States Census Bureau in this table.

TABLE IX.

Comparative Table Showing Occupations of Widows Employed Outside the Home; Taken at Date of Injury to Deceased and Date of Investigation.

Occupations of widows	Number of widows employed outside home	
	Date of injury	Date of investigation
Agriculture		7
Clerical	2	17
Domestic	7	54
Manufacturing	5	41
Public service		1
Professional		10
Trade	1	24
Transportation		2
Totals	15	156

Remembering that all but twenty-five of our nine hundred thirteen children were of school age or younger, we studied the occupations of dependent children at the time the workman died and contrasted it with their occupations at the time of the investigator's visit. The table shows more than twice as many dependent children engaged in full time work at the time of investigation as at the time of death.

TABLE X.

Comparative Table Showing Occupations of Dependent Children at Date of Injury to Deceased, and at Date of Investigation.

Occupations of dependent children	Total number of children	
	Date of injury	Date of investigation
Home	319	203
School	575	573
Full-time work	16	33
Part-time work	3	6
Totals	913	*815

*Difference in totals due to number of children who ceased to be dependent. See Table XI.

It is commonly accepted as a truism that widows marry in much larger per cent than maidens. We were surprised to find that the numbers of remarriages among the group of five hundred thirty-one widows was so small. Only seventy-four, or 13.93 per cent of the whole number had remarried by the time the investigator visited them. Table XI shows the various changes in status which took place among widows and children between the date of death and the date of investigation.

TABLE XI.

Table Showing Changes in Status of Widows and Children Which Occurred Between Time of Death of Deceased, and Time of Investigation.

Changes in status	Number of widows whose status has changed since date of injury	Number of dependent children whose status has changed since date of injury
Death -----	9	11
Marriage -----	74	13
Become 18 years old -----	0	84
Posthumous birth -----	0	22
*Become self-supporting -----	0	10
Adoption -----	0	2

*Applies only to children who, at date of injury, were over 18, but dependent in fact.

We have compiled extensive statistics showing the sources and amounts of income which the six hundred seventy-four families received at the time the breadwinner was killed, and at the time of the investigation. Unfortunately the finances of the whole world have been so variable from 1914 to 1920 that these figures do not furnish a reliable basis of comparison. The most interesting and illuminating figures concerning income are those which show the number of families which, by the time the investigation was made, had been forced to ask for public or private aid to supplement their compensation or their earnings. Public aid to California half-orphans is state aid, or state and county aid, which means that these families are not only suffering the moral stigma incident on accepting charity, but are a direct expense to the state instead of being a charge on industry which killed their breadwinners. Thirty-four out of the three hundred fifty-five families consisting of widows, and widows and children, together with four families in which were left children but no widows, were receiving state aid at the time of the investigation. In addition to those families receiving public aid fifty-seven families were receiving allowances from friends or relatives. This makes a total of ninety-five families, that is 14.1 per cent of the whole six hundred seventy-four which, by the time the investigation was made, were depending in part or whole upon private or public charity. One hesitates to think how far this number will increase as the compensation period expires in more cases.

It may be of interest to note that two hundred ninety-seven families owned property at the date of death, of which one hundred sixteen pieces were mortgaged. At the date of investigation three hundred seventy-four families were property owners and seventy-seven of these had mortgages on their property. It is not an unusual circumstance for a widow to ask for part or all of the compensation to be paid to her in a lump sum for one purpose or another. The Commission investigates every such application carefully, for investment sharks have been known to wait in the background, and more than one attempt has been made to marry a widow in order to depart with her lump sum. Excellent reasons must be shown for the request, such as to buy a home, or to pay off a mortgage on a home, or to improve property so as to make it income producing. If the widow has had business experience she may want some small capital to start a business of her own, or she may plan to return to a former home either in another state or in a foreign

country. Lump sums were granted in one hundred ninety-six of the cases. In twenty instances advances were allowed from time to time in varying sums in order to meet special needs. In other cases the commutations were allowed in considerable sums, the total for all such advances being \$195,654.69, the average payment being \$998.23.

The purposes for which these commutations were allowed were as follows:

To buy homes-----	23
To pay off mortgages-----	20
To repair homes-----	11
To pay pressing debts-----	32
To supplement insufficient weekly payments-----	12
To pay debts due to illness in family-----	10
To pay funeral expenses in excess of \$100 allowance-----	8
To start in business-----	9
Compromised settlement agreements-----	40
To leave the state for a former home-----	9
To reinvest at a higher interest-----	3
To pay for an education-----	1
To send money to dependents in foreign countries-----	9
Cases in which records do not disclose reason-----	9
Total -----	196

Of the foregoing, sixty-four payments covered the total death benefit, ninety-seven were partial payments on account, thirty-five were partial, but also final, closing out the account.

Throughout the whole investigation the agents were asked to state clearly in each case whether or not they considered compensation adequate, and if it was not adequate, what remedy they would recommend. These judgments are of value, for they summarize the effect of the compensation in meeting the reasonable needs of each family. In brief, the agents found compensation adequate in two hundred sixty cases. It more than met the reasonable needs in sixty-seven cases, and it was not sufficient in two hundred ninety-eight cases, or 44.2 per cent of the total six hundred seventy-four. In only 38.5 per cent of the cases did it fit. Tabulated, their conclusions and recommendations are as follows:

TABLE XII.

Table Showing Adequacy of Compensation of Total Cases.

Adequate -----	260
Not indispensable -----	67
Needed in larger installments-----	26
Needed for longer time-----	203
Needed in both larger installments and for longer time-----	69
Unable to judge-----	49
Total-----	674

In order to see the relation between the adequacy of compensation and the size of the family, we expanded Table XII and found that the proportion and even the number of cases in which compensation was inadequate increased directly as the number of children in the family increased. Table XIII shows this quite clearly, and brings home vividly the fact that the present three-times-the-average-annual earnings method of figuring death benefits takes no account of the size

of the family which is left dependent, and whose reasonable needs it is supposed to meet. Table XIII does not include families composed of relatives other than a widow, or a widow with children.

TABLE XIII.

Table Showing Adequacy of Compensation In Relation to Size of Family.

Size of family	Total number	Adequate	More than adequate	Insufficient	Unable to judge
Widow only -----	162	84	27	46	5
Widow and one child -----	134	78	6	35	15
Widow and two children -----	87	23	6	55	3
Widow and three children -----	71	12	0	56	3
Widow and four children -----	31	8	0	23	0
Widow and five children -----	10	0	0	9	1
Widow and six children -----	13	0	0	12	1
Widow and seven children -----	7	1	0	5	1
Widow and eight children -----	1	0	0	1	0
Widow and nine children -----	1	0	0	1	0
Totals -----	517	206	39	243	29

Let us now summarize conditions in the groups of dependents which are left by men who are killed in industrial accidents. They consist principally of widows alone, and widows with children. There is a small number of special cases which do not fall within these groups. The widows are mostly between thirty and forty years of age, are in reasonably good health, have had practically no experience or training in wage earning, and are busy as home keepers of an individual family group. Those who have children have an average of 2.36 children each. The children are practically all under sixteen, and most of them are under ten, with a large group too young to go to school. Clearly they will not be producers of income for many years. Suddenly the breadwinner is killed, and after a necessary period they are supposed to have readjusted their lives to the changed conditions, and to be supplying their reasonable needs with a death benefit which comes to them in amounts equal to 65 per cent of the wages they are accustomed to depend on, and which will last about four years and a half, or until they have received three times the average annual earnings of the dead man.

Let us visit them three years after the death and see what has happened. The widows are older, but most of them are still between thirty and forty. They are not in such good health. Some of them have developed definite diseases, others show the effect of hard work, worry and little income. Many of the widows who have no children are working and supporting themselves adequately without aid of the compensation and that is banked or used for gorgeous clothes, according to the temperament of the individual. An unfortunately large number of widows who have children are working, not from choice, but because they found the compensation payments too small to meet the needs of themselves and their growing children. Some of the children have ceased to be dependent, but the largest number are still under sixteen, and there is still a large group which is too young for school. This has been added to by children who were born after the father's death. Twice as many children under eighteen are working as

before. We find that many families have broken up housekeeping and have either gone to live with relatives or joined forces with other families to cut down expenses and share responsibilities. Very few of them received insurance other than compensation and most of those who did received merely burial benefits. There has been an appreciable lowering of the standard of living and we are forced to conclude that, except for some of the widows who had no children, compensation has been mainly insufficient.

The remedy which the Commission proposed was embodied in Senate Bill No. 259.

In making follow-up visits the investigators were frequently asked what jobs existed, and where dependents could get training, and they became convinced that more than a casual knowledge of jobs and schools was necessary. Therefore, a survey was started of industrial opportunities and vocational schools. Through the kindness of the Industrial Welfare Commission we obtained a list of San Francisco firms employing more than ten women, and then visited representative firms in various industries to learn working conditions, hours, wages, possibilities of employment, and the demands of the job. We then studied the provisions for vocational education in San Francisco and Los Angeles, and visited some typical schools which taught various trades. It is to be noted that with the exception of clerical work, practically all vocational instruction for women in San Francisco is done by private schools. Los Angeles is more fortunate.

This feature of the work has been very interesting, and is capable of almost indefinite extension. We have linked up with various organizations interested in women's vocations and believe that it is possible to carry on a vocational information service which shall be of the greatest use to our dependents. Using this information we can tell them of definite jobs and where to train for them and what to expect from them, and we believe that this definite information will do much toward helping them readjust their lives to the changed conditions brought about by the death of the breadwinner.

Our continued visits to dependent families and the knowledge we gain of the effect of the present death benefit provision strengthens our conviction that its revision is very necessary. We look forward to the time when compensation for death shall take into account the size and composition of the family, as well as the wages of the deceased. We hope that the Commission may be authorized to assist in the economic rehabilitation of the family by means of vocational training and placement. This is as much a part of the administration of a "complete system of workmen's compensation" as that physical rehabilitation of injured men which is recognized as a vital part of the Commission's work.

MEDICAL DEPARTMENT.

The fiscal year 1920-1921 has witnessed no change in the personnel of the Medical Department and only slight readjustments of methods.

The report for 1919-1920 comments upon the plan adopted in 1917 which provides for more examinations of claimants in the office of the Commission. This plan has been working smoothly and is of advantage in facilitating and expediting the work of the Commission.

It was anticipated in the early days of the existence of the Industrial Accident Commission that a considerable portion of the cases coming to the Medical Department would be susceptible of classification into groups which would permit of the establishment of precedents.

This has been realized to some extent, but not to the degree expected. It seems that as soon as one problem is settled and precedent established, some new and more intricate condition presents itself for solution. The inference must be that the medical and surgical problems of the industrially injured are not susceptible of classification and automatic decision, that the individual must be treated as an individual and his own needs, peculiarities, personal and physical, and mental state taken into consideration.

Following is a tabulation of the cases handled in the Medical Department of the Commission for the fiscal year 1920-1921:

	General physical examinations	Special medical examinations requested by—			Opinions	Bills approved
		Insurance company	Employer	Industrial Accident Commission		
San Francisco office.....	1,082	119	46	161	604	402
Los Angeles office.....	451	308	80	98	235	115
Totals	1,533	427	126	259	839	517

Comment was made in the report of 1919-1920 upon the acceptance by the Commission and the partial acceptance by the medical and lay public of the principles of occupational therapy, physical therapy, reconstruction and reeducation. During the last year, physical therapy has come to be as much an integral part of the treatment of the injured in appropriate cases as is surgery. For the other divisions of therapy, not so much can be said.

It might be well at this point to discuss the question of return to work after injury.

The hope of the Medical Department in offering the remarks which follow is to direct attention to the prevailing attitude which exists toward work and which is largely a product of workmen's compensation, and to enlist the support of propaganda for alteration of this attitude.

Is it logical to expect a reward for getting hurt? No one ever thought of reward until industrial accident compensation or war risk insurance came. With the soldiers, to be sure, it may be natural enough, but for workmen to assume the attitude is irrational.

Why is it that the injured is generally subjected to a radical change of environment and habit? Public sentiment contributes somewhat to the treatment, but do not the doctors provide a most artificial environment in their hospitals? Do they not contribute the most to the destruction of normal routine?

Work treatment is known to be valuable. Occupational therapy is a widely accepted theory, but is not put into practice. Normal habitat, habits and routine make for health of body and especially of mind. Our treatment of the injured should involve as slight departure from normal in habits and environment as is compatible with proper technical treatment.

No one is morally entitled to idleness because he has been hurt. It may be best for him to be perfectly idle. That is all right, then it should be so. But morally, when he may do any work without harm to himself, he should work. Steady work and routine are moral, beneficial, normal. Idleness in any walk of life is demoralizing, harmful and abnormal. The normal animal works that it may live. If it can not work, it ceases to exist. Civilization is the only barrier between destruction and survival in the injured of industry.

We can not go back to the old order of things. The product must pay for its production, and production costs lives and limbs. So the product must take care of the injured, and the injured workman must be taken care of by one other than himself. We must neutralize this disadvantage to attain the greatest good.

All of the things which work treatment involves have already been tried out successfully somewhere. It is no new thing. In each instance it has been an individual effort and plan, and not the product of public sentiment. It has been all the more difficult of accomplishment.

A corollary to our statement that no injured person is morally entitled to idleness, is that every injured person is morally entitled to earn whatever he can with whatever function he possesses. "No one is disabled whose spirit is not disabled." Some independent souls will find work in spite of vast handicaps. A man called a few days ago to inquire about a disability rating. A year before, he had suffered a fracture of several vertebral processes. He wears a body cast. He had been working since three months after his injury. He had needed the money for his family. He had earned more than before his injury! We do not encounter many such refreshing incidents because few men have the requisite extraordinary initiative, fortitude and fortune. Withal, this man is in better physical condition than the average case is, in such interval of time after injury. There are many obstacles to such occurrences. Some of them, to enumerate, are: (1) Public sentiment against work when at all incapacitated and the reflected personal attitude; (2) lowered pay; (3) inability of the average working man to secure positions for himself because of handicap; (4) satisfaction with compensation and lodge benefits, often totaling more than the wages; (5) timidity, nervousness, lack of fortitude to bear the discomfort entailed by work; (6) aversion to attempting work of a kind not followed when hurt; (7) Disinclination of employers to experiment with cripples; (8) hostility of bosses and fellow-workmen; (9) inertia of employers or of insurance companies in finding suitable occupation; (10) no tangible pecuniary advantage to anyone.

We imagine that this last statement is the crux of the whole matter. But is there no tangible pecuniary advantage? We can not state which of the larger and best organized companies in the country follow a plan of work treatment, but we can state that a large number of them do follow a system of rehabilitation through work, and that they find it economical, both in time and in money. Inability to see the tangible pecuniary advantage may be more exactly characterized as lack of education, or lack of self-interest. The insurance companies charge a premium which more than covers costs as they are. Why should they worry about or bother with work treatment?

The work treatment after injury can be ideally carried on in a large industrial plant which supports its own dispensary and medical department on the ground. The surgeon can make inspection of the work environment of the injured under his treatment, and can actually prescribe work, being familiar with the situation himself, and see that it is carried out without abuse.

This needs the practical cooperation of bosses, but that has been obtained satisfactorily in many plants.

However, the insurance companies could, by a system of merit rating, or some system akin to that, arrange for work for the convalescent in the industrial plants in which they were hurt. The alternative for this is workshops connected with hospitals and occupational therapy farms. These present many difficulties, not the least among them being the disposal of a product if the injured man is to be paid for his work. Pay for work is essential, we think. The injured must receive his full wage.

Some of the hardest problems we meet are involved in the cases of partly disabled men who have dependents. They can not exist upon the compensation which they receive, are not able to find employment for themselves and employment is not furnished. Without any doubt, many of these cases are hampered in their progress toward recovery, and sometimes are permanently disabled because of the futility of any effort they can make on their own account and the anxiety and depression incident thereto. We see a large number of cases which we are positive would have recovered normally and in a reasonable time had they been able to work. They have been willing to work, anxious to work, but unable to because of the barriers in the way. Work must be furnished! We used to tell the partly disabled to get light work and we would cut off part of his compensation. The average worker simply can not find work unaided.

All of this subject of work is going to require reeducation of the public and of the injured. It has become a habit of thought that an injury entails idleness. This habit of thought will have to be overcome, partly by rational consideration and partly by the example of a class large enough and with sufficiently good discipline to reverse the present system. It will also require the cooperation of the unions. We believe that the unions will cooperate as soon as the rationality of the work treatment appeals to them, and as soon as they are assured that the injured worker will receive as much pay for his time as he did before he was injured.

Uniformity will be another urgently required factor. It will never do to have certain groups of men idle during their convalescence and to have others required to work.

The points we are endeavoring to make are: that injury is not to entail idleness; work is to be provided, preferably with full pay; work in the plant where injured, under supervision of the plant physician, is best; work in plant where injured, reporting as need be to physician, is good; work provided by hospital, school, farm, etc., is far preferable to idleness.

We devoutly hope that one day soon, work treatment in suitable cases will be as well recognized as a necessary therapeutic agent as physical therapy now is.

DEPARTMENT OF SAFETY.

No attempt is being made, nor is it essential, to determine with any degree of exactness the concrete benefits resulting from the activities of the Safety Department, for the period covered by this report. The figures given in the appended statistical tables merely demonstrate that the time of both the technical and office staffs has been fully and profitably employed towards the reduction of hazards. It would be idle speculation to theorize on the possible extent of injuries and fatalities in the State of California, were it not for the moral and material consequences of the efforts put forth by the Safety Department.

No doubt has been entertained either as to the magnitude of the task undertaken by this department or as to the effectiveness of the powerful check exercised on the needless sacrifices claimed by industry.

In a quietly determined, self-effacing though vigorous discharge of the duties imposed by law, this department has made its influence felt primarily to the benefit of employees and incidentally to the advantage of the general public. It is of interest to note in this connection that safety orders have been issued, printed, and circulated for twenty-one different classes of activity, industry, equipment or energy, and that three more are in course of preparation. The cooperation extended by the insurance carriers, the various allied state institutions, municipal authorities, civic bodies, organizations of employers and employees and public spirited individuals is gratefully acknowledged.

The California Safety News, the monthly publication issued by this department, reached a circulation of 8000 copies. Space does not permit the insertion of any of the unsolicited expressions of enthusiastic commendation of the helpful and interesting material contained in its pages. It is a highly appreciated medium for the dissemination of technical and practical information, and, since the contributions are mostly those of our own staff, it has been possible to keep the expense of publication at a figure altogether insignificant when compared with the lasting benefits accruing to the reader.

The 1921 session of the California Legislature repealed chapter 202 of the Laws of 1917 by passing Assembly Bill No. 1300. This means that the work in the Boiler Division will be circumscribed, because chapter 202 provided for the periodical inspection of boilers under a fee system and the issuance of permits. Authority was also given to issue certificates of competency and to ask the superior court of any county for an injunction restraining the operation of any unsafe boiler. In the opinion of the Safety Department, all the provisions of chapter 202 had proved their worth and vigorous opposition was presented to the proposed repeal. Boiler explosions are practically unknown in California and there was a natural desire to continue the good record. The loss of fees means a substantial reduction in the slender financial resources of the Safety Department.

We believe a mistake was made by passing Assembly Bill No. 1300, and that a backward step was taken in dealing with the problem of accident prevention. The wrong move was made by many of the

proponents of Assembly Bill No. 1300. They were under the impression changes they desired in the Boiler Safety Orders could be consummated by repealing the Boiler Inspection Act. This was an error. The Boiler Safety Orders have their being under the Workmen's Compensation, Insurance and Safety Act, and the last named act provides an orderly procedure for changing or amending or taking to the courts any safety order considered objectionable. We believe time will convince all those who fairly and honestly favored the repeal of the Boiler Inspection Act that a mistake was made.

California may well be proud of its safety record. In comparing the casualty figures with those of other states it should be considered that our statistics are as complete as those of the most advanced states. This is the only state that has complete sets of safety rules covering quarries, tunnels and gold-dredges. The United States Bureau of Standards has borrowed largely from our Logging and Sawmill Safety Orders. The emulation of our methods by other states awards us the meed of highly acceptable flattery. It is well to point out in this connection that most states have their elective safety officials, as mining and factory inspectors, whereas California prides itself on its distinctly technical appointive organization under civil service reporting to the Industrial Accident Commission through the superintendent of safety. Little perception is needed to determine the manifold advantages of the latter plan over the former. It is keenly realized, however, that there are still too many needless accidents, and every member of the department is dedicating himself to the elimination of this condition, to the end that the State of California may become a safe place to work in and live in.

Every unit in the Department of Safety is charged with some special form of safety work and must stand or fall by its own efforts. It is extremely gratifying that it can be reported that each division can look back upon a record of well-sustained, profitable activity.

BOILER DIVISION.

The year ending June 30, 1921, has been one of activity on the part of the Boiler Division of the Department of Safety.

In August and December, 1920, and in January, 1921, public hearings were held on the Tentative Revised Boiler Safety Orders. The statistical tables show the activities of the division throughout the year and constitute a record of endeavor on the part of the staff to reduce the number of injuries to employees working near boilers and air pressure tanks.

In addition to the inspection of boilers and pressure tanks, the inspectors have devoted, particularly during the last six months, an appreciable part of their time to general inspection work, in order to save a duplication of traveling expenses.

Part of the chief inspector's work consists of the checking of designs of boilers and other pressure vessels, and the service is invaluable to manufacturers, who now seldom receive an inquiry which does not specify that the boiler or pressure vessel shall meet the requirements of the Industrial Accident Commission. These requirements are based

on such sound, practical and theoretical foundations that the public is not slow to recognize the advantages gained from the standpoint of both safety and economy.

In February, 1921, the chief boiler inspector attended the first annual meeting of the National Board of Boiler and Pressure Vessel Inspectors in Detroit, Michigan, which has as its principal object the promotion of greater safety to life and property, by securing concerted action and maintaining uniformity in the construction, installation and inspection of steam boilers and other pressure vessels and their appurtenances. Mr. R. L. Hemingway, the chief boiler inspector for the Industrial Accident Commission, was unanimously elected vice chairman of this national organization.

Apart from the mishaps of a more or less minor nature, the year has been entirely free from boiler explosions, with one exception, which resulted in the death of three men and the severe injury of three others.

The public is beginning to appreciate the benefits that are directly attributable to the annual inspection service, especially since incipient defects are almost invariably detected and the proper method of preventing an explosion recommended. As a direct result, the user benefits not only in the increased longevity of expensive apparatus, but also secures the benefit of continuous service.

CONSTRUCTION DIVISION.

When consideration is given to the fact that twelve out of every hundred accidents reported to the Commission in the past have occurred on construction work, some idea may be gained of the task assigned to the one and only construction engineer in the Safety Department. It was barely possible to skim the surface.

A great deal of time was spent in checking the designs of existing buildings and other structures which have been reported unsafe; inspecting fire hazards and unsafe conditions in schools, hospitals, hotels, theaters and factories in various parts of the state; attending committee meetings and revising the General Construction Safety Orders; holding conferences with contractors, architects, engineers, employees and others regarding the interpretation of rules and methods of meeting the Industrial Accident Commission's safety requirements.

Some twenty safety talks on subjects related to construction were given at various places. Articles were prepared for publication in the California Safety News and the ever increasing volume of correspondence has been handled expeditiously.

ELECTRICAL DIVISION.

During the year substantial progress was made in the revision of the Electrical Utilization Safety Orders. The revisions committee has written several new sections relating to particular classes of electrical installation and has combined in the Tentative Revised Electrical Utilization Safety Orders certain provisions contained in the National Electrical Code and the National Electrical Safety Code. The combination of these two recognized standards and adaptation to California

industries is now reaching accomplishment in the drafting by the committee of a set of orders to succeed the now widely conflicting electrical ordinances adopted by various municipalities.

The work of the electrical contractors on new installations shows a marked improvement over that of last year. The electrical industry is striving conscientiously for better and safer electrical installations and satisfactory progress can be reported as a result of the effective coordination of the activities of the division with those of the municipal inspection departments.

An increase is noted in the use of safety switches and motor control devices. The use of conduit, metal raceways and metal cabinets enclosing conductors and current-carrying parts has become standard practice. Complete "iron clad" electrical installations are increasingly displaying their advantages over the temporary and hazardous "open wire and bare copper" jobs of the past. Many industries have changed their old or put in new lighting systems in conformance with the requirements of the General Lighting Safety Orders. Improvement in quantity and quality of production, lessening of eye strain and reduction in the number of preventable accidents were the natural consequences.

At the last session of the legislature, a bill was introduced to provide for the inspection of all electrical equipment in the state and for the issuance of inspection certificates. The proposed legislation provided for the adequate administration of the Electrical Utilization Safety Orders, the licensing of electrical contractors and the charging of fees for electrical inspection to defray part of the cost of administration. The enactment of a bill of this character would have insured the periodical inspection of all electrical equipment installed in the industrial plants of this state, and would have worked towards the reduction of fire losses from electrical causes and a decrease in accidents through contact with exposed current-carrying parts of equipment. It is believed that the opposition to this bill, which resulted in its being tabled by the Senate judiciary committee, found its inception in a misunderstanding.

ELEVATOR DIVISION.

Arrangements are being concluded to present to the revision committee a set of Elevator Safety Orders which should, if adopted, reduce to a minimum hazards encountered in vertical transportation.

This has been a year of close coordination with representatives of insurance companies and the result is plainly reflected in the lessened number of accidents. This division prides itself upon its record of increased activity over that of the preceding fiscal year at a smaller operative cost. The foundation has been laid for an improved inspection service and augmentation of revenue, through the enactment of suggested legislation.

With the constantly increasing use of elevators throughout the state, the number of accidents reported does not accurately reflect the reduction in the percentage of accidents.

The causes of many accidents in the past have been eliminated and many elevator owners are now loud in their praise of devices that have

been installed to prevent accidents, although they objected strenuously when the matter of installation of these devices was first called to their attention.

MECHANICAL DIVISION.

In addition to the usual inspections, investigations were made of numerous complaints regarding unsafe conditions. This division cooperated with various fire departments in assisting to reduce hazards due to fire.

Since the cessation of all activity heretofore engaged in by the United States Grain Corporation, redoubled efforts were made by this division to prevent dust explosions.

Gas Welding and Cutting Safety Orders have been drafted and are ready for presentation to the committee. Effective coordination has been established to the end that reports of preventable accidents may be secured and followed up more promptly and effectively. The assistance of staff members of other divisions of the Safety Department was frequently requisitioned and field work apportioned to them so as to economize on traveling expenses.

MINING DIVISION.

The chief mining engineer has been required to spend a considerable portion of his time in the office, due to the numerous problems presented by operators of mines, quarries, tunnels, etc. This service, which was freely given and as freely sought, tended to place the principal burden of field work on but two mining engineers.

Mine Safety Rules were revised and after the addition of important provisions were given effect as Mine Safety Orders in June, 1921.

A careful survey of conditions existing in the petroleum industry was started in April, 1921. Valuable data to be used in completing the Tentative Petroleum Safety Orders is being obtained. Warning circulars dealing with unsafe conditions found in the petroleum industry have been issued. As a result of this safety work, the various oil producers, like other employers, are endeavoring to provide safe working places for their employees.

Ventilation and fire hazards in mines are being carefully studied in cooperation with the district engineer of the United States Bureau of Mines. The mining division has continued to cooperate with representatives of the National Board of Fire Underwriters, the Commission of Immigration and Housing, the State Board of Health, the State Mining Bureau and other state commissions.

SHIPBUILDING AND LUMBERING DIVISIONS.

During the fiscal year ending June 30, 1921, committee meetings were held and safety orders covering the shipbuilding industry were drafted. After holding public hearings on these orders they were adopted by the Commission and became effective April 1, 1921.

Twelve articles on safety were written and published and a number of addresses delivered. In the last month the entire time of the safety engineer, originally assigned to the shipbuilding division, was devoted to the making of general inspections in the logging and sawmill industry.

SAFETY MUSEUM.

The outstanding feature of the fiscal year, in so far as the museum is concerned, was the installation of the electrical lighting exhibit. The California electrical cooperative campaign management has expended approximately \$3,000 to enlarge upon the advantages of adequate lighting. Friday night lectures in connection with the demonstration have been patronized by an appreciative average attendance of 75.

About 6000 casual callers have visited the museum and about 20 per cent of them appeared sincerely interested in the exhibits and asked for and received pertinent safety literature.

LOS ANGELES OFFICE.

The Los Angeles office is charged with the administration of departmental functions in southern California.

In January, 1921, this office was moved from quarters in the Union League Building to its new location, 908 Pacific Finance Building, at the corner of Sixth and Olive streets. Adequate space and bettered arrangement, thus provided, have done much toward facilitating the work of the office and the more central location has proven of much greater convenience to those having business with the office.

Engineers and inspectors in the electrical, elevator, boiler, construction, mechanical and general divisions made inspections of places of employment and issued reports requiring the elimination of all hazardous conditions encountered; accidents were investigated, and measures, designed to guard against recurrences, were prescribed; complaints regarding hazardous conditions were investigated and appropriate action taken; tests were made of mechanical equipment and official visits were paid industrial plants and plant officials at main offices in the interest of safety.

In addition to the above, engineers and inspectors attached to the San Francisco office were, at various intervals, assigned to work in this field, and cooperated in making inspections in shipyards, mines, quarries, oil fields and of elevator and electrical installations, and construction work.

In cooperation with the San Francisco office, and others interested, research work was carried on bearing upon the drafting of Petroleum Industry Safety Orders and Shipbuilding Safety Orders, and the revision of the Electrical Utilization Safety Orders, Boiler Safety Orders and Elevator Safety Orders.

Close contact has been maintained with the Southern California Society of Safety Engineers, the Los Angeles Chamber of Commerce, the Los Angeles Fire Prevention Bureau, city, county, state and federal officials and organizations, employers' and employees' organizations, and other persons and bodies mutually interested in accident prevention.

In exercising the authority vested by law, reasonableness and cooperation in the fullest degree have been the actuating purpose, and the manner in which the personnel of industrial concerns in this field have reciprocated is most gratifying and bids fair to reduce to a minimum the toll in life and limb incident to industrial activities.

SUMMARY OF ACTIVITIES.

Fiscal Year 1920-1921.

Inspections.

Boiler—	
Air tank	110
External	225
Internal	1778
Second hand	147

Buildings, hotels, and window cleaning	43	1,803	49
Institutions other than state	9	212	12
Totals	2,381	128,353	3,352

GENERAL CONCLUSIONS.

It was thought best to prepare a general survey of the activities of the Safety Department rather than a series of complicated tabulations. The safety engineer's efforts are largely cumulative in effect and it is not one of the least difficulties with which he has to contend that he is rarely in a position to point definitely to the results of his labor by a concrete presentation of figures. The superintendent of safety is,

nevertheless, fully cognizant of the impetus that might be given the safety movement, were such statistical information available, and hopes to secure the required data in the future.

The composite technical staff member of this organization has made, in the course of the fiscal year, 10,403 inspections and 700 investigations. He has performed 44 special tests of apparatus, made in addition 1332 visits of plants and examined a number of applicants for certificates of competency, 21 of which were successful. He has traveled, in the course of his duties, 158,000 miles and has preached the gospel of safety wherever he went. He cooperated industriously with the equally efficient composite office member.

The department mailed out in the past fiscal year in excess of 185,000 pieces of stamped mail matter, roughly distributed as follows: California Safety News, 60,000; registered communications, 5000; letters, circulars and postal cards, 120,000. What with telegrams and telephones, filing and messenger work, the distribution of and taking care of the enormous volume of incoming correspondence, typing, library, museum and reception service, it may be readily seen that the office force, which consists of only 15 assistants, had no opportunity to be idle on the job.

The department has earned in fees for inspection of certain boilers and elevators only the sum of \$20,802.80, about 13.13 per cent of the entire department's expenditures for the fiscal year. It is sincerely regretted that the repeal of the boiler inspection law will substantially affect our revenue from this source.

STATE COMPENSATION INSURANCE FUND.

Figures recently published by the Insurance Commissioner show that the volume of compensation business transacted in California again increased in 1920, the total premium writings of all carriers reaching the imposing figure of \$12,944,506.67. The net writings of the State Compensation Insurance Fund amounted to \$4,417,761.32, representing an increase of approximately 36 per cent over the business for the previous year and amounting to nearly four times the business of its nearest competitor.

In the matter of financial strength the fund has continued to advance until, as of June 30, 1921, its statement shows assets of \$5,651,924.05 and a net surplus of \$1,729,797.97 after paying dividends to policyholders since beginning operations totaling \$2,892,827.58. We think it can reasonably be stated that this steady progress of the fund, in the face of the severest competition, is indicative of the satisfactory service rendered and the economical manner in which the premiums entrusted to the fund by California employers have been handled. The fact that claims have been met promptly and without technical quibbling is amply illustrated by the remarkably small percentage of contested cases to the number of injuries reported. In the year 1920, 32,375 injury cases were reported to the fund and only 207, or slightly more than six-tenths of one per cent, were permitted to go to the Commission for hearing. A large proportion of that small percentage were cases not in contest but submitted upon stipulation to clear up questions of law or dependency.

The staff of the State Compensation Insurance Fund now consists of nearly three hundred persons. In addition to the executive offices in San Francisco, branches are maintained in Los Angeles, San Diego, Oakland, Sacramento and Fresno, and a large field force of trained insurance men continually cover the state in the interests of the fund and its patrons. Handling one line of insurance only (compensation), these representatives are able to specialize in that one form and bring into their work a high degree of efficiency and of knowledge.

The latest session of the legislature witnessed a repetition of previous attacks upon the fund through legislation sought by its competitors in an effort to cripple its efficiency. One of these took the form of a bill to limit the surplus of the fund to a definite amount, regardless of the volume of business and amount at risk. Such a restriction is contrary to all sound insurance theory and to the practices of conservative insurance corporations. Another was a bill to prevent the fund from continuing in its dividend disbursement plan the very principles underlying the theory of experience rating, which form of rating has been so stoutly and consistently defended by the fund's competitors. Both of these bills were defeated.

At the same legislative session the Industrial Accident Commission, with the full concurrence of the manager of the fund, proposed bills providing for the return to the state of the original appropriation of \$100,000 as a capital for the fund and for an increase in the fund's tax

upon premiums to an amount equivalent to the tax upon insurance companies under the King tax measure. These proposals were presented in order that the fund might more strictly carry out the "fairly competitive" intent of the law. The first mentioned of these measures was adopted by the legislature and enacted into law. The second was presented too late for consideration, but sufficient authority for the increased tax was found in the existing statute and it is being paid into the accident prevention fund of the state.

The difference between the claim reserves for the year 1917 and the actual losses for that year was released to surplus on December 31, 1920, and on January 3, 1921, following the practice for previous years, a final dividend was paid to 1917 policyholders which amounted to \$297,149.71 and brought the total average dividend for that year to 31.5 per cent of the premiums.

Beginning January 1, 1921, for policies issued in the year 1920, and to continue until experience might indicate the necessity of a change, it was decided to make dividend disbursements in a single payment shortly after policy expiration, rather than in two installments as heretofore. The fund had then attained a financial status where this could safely be done without depletion of surplus except, perhaps, temporarily and pending replenishment as reserves are released under the law. For this purpose, and for distribution of the final 1917 dividend above mentioned, an entirely novel plan was adopted. That plan was evolved after extensive actuarial study and test and contains two factors which never to our knowledge have heretofore been applied in dividend distribution, though one of them (Professor Whitney's "Z" factor) has been used in various plans for the prospective rating of compensation risks. The factor referred to provides for giving increasing weight to the loss experience of individual risks with increasing size (as represented by premium earned) of risks treated. For the fund's dividend distribution plan this so-called "Z" factor is combined with a factor for graduated expense loading whereby the smaller risks bear a somewhat greater ratio of expense to premium than in the case of the larger risks. The propriety of this is demonstrated by experience which shows that the actual cost of handling, recording and providing necessary service decreases in percentage to premium as the risk size increases.

In the practical application of the plan above outlined the smaller employer receives an annual dividend which, in percentage of premium, will fluctuate but slightly, if at all, no matter what the loss experience on his risk may be. With increasing size of risks, however, the range between minimum and maximum increases until, in the case of a risk paying an annual premium of \$200,000, the minimum dividend becomes 10 per cent and the maximum 73 per cent.

The theory underlying the use of the so-called "Z" factor is that the larger the risk and consequent larger annual spread of pay roll exposure the more nearly that risk approaches a point where its experience is fairly constant and can safely be taken for determination of an individual rate. In applying this principle to prospective experience rating it falls far short of doing individual justice because it attempts to measure future hazards by past experience even though the conditions

for the future may be greatly changed with respect to construction, safety devices, supervising personnel, class of employees, etc. When applying the same principle retroactively through dividends no such injustice is done and the future is left to be treated the same way and after the actual experience has been accumulated.

In the matter of service to employers and employees, the management of the fund has built up an organization for underwriting, pay roll audit, safety inspection, medical direction and claim adjustment which is believed to be unexcelled, if equaled, in the state, and effort is constantly being exerted for improvement in the service. The absolute elimination of errors and occasional vexatious delays is, of course, impossible where the human equation is involved, but keeping these to an "irreducible minimum" is the continuous aim. Considerable pride is taken in the fact that a recent report of the United States Bureau of Labor Statistics, covering an investigation of the compensation systems in twenty-one states and two Canadian provinces by Hon. Carl Hookstadt of the bureau mentioned, cites the California State Compensation Insurance Fund as an example of the best in competitive state funds. The report also gives the California fund first place among competitive carriers in the promptness with which claims are paid.

It is estimated that the net premium writings of the fund for the calendar year 1921 will exceed \$5,000,000 based upon the business done to date of this report.

The financial statements and statistical tables which follow are prepared in form similar to those contained in previous publications in order that they may be readily used for comparative purposes.

In submitting this report the fund management renews its pledge to service, economy and justice in its dealings with employers and industrial workers.

STATE COMPENSATION INSURANCE FUND.

Statement of Business Done During the Period From January 1, 1921, to June 30, 1921.

<i>Earnings.</i>

STATISTICAL REPORT FOR THE CALENDAR YEAR 1920.

FOREWORD.

This report contains statistical exhibits of industrial injuries which occurred in the calendar year 1920. Employers, attending physicians and insurance carriers are required by law to report such injuries to the Industrial Accident Commission.

To obtain the highest degree of accuracy possible, these separate reports have been brought together and rigorously compared. In securing and handling the reports in this way there has been not only a reduction of errors in the facts reported, but also an assurance that substantially all industrial injuries have been reported. The comparatively small number of cases reported, in which essential information about the injury is lacking, indicates the care displayed in the collection of this data.

The form of this report and the structure of the tables are similar to those used in presenting the statistics of industrial injuries for calendar year 1919, and conform as closely as the nature of the data permits to the standards recommended by the statistical committee of the International Association of Industrial Accident Boards and Commissions.

There were in all 134,108 cases reported, of which 70,405 represented tabulatable injuries, that is, injuries which caused disability lasting longer than the day of injury. Of the remaining 63,703 cases, there were 3,178 in which the disability was unknown and 60,525 which caused no disability. Of the 70,405 tabulatable injuries, 32,459 were compensable, that is, they involved the payment of disability indemnity as provided by the law. As in last year's report, some of the tables deal with compensable cases only and others with tabulatable cases. Direct comparison may be made with last year's report, but proper allowance must be made in making comparisons with earlier reports which dealt with all injuries reported.

The treatment of cases in which the extent of disability was still indeterminate on June 30, 1921, has been the same as was employed in last year's report. The ultimate cost of compensation in these cases was determined by the use of a table which gives the average cost of indeterminate cases according to the time which has elapsed between the date of injury and the date of determination. The following is the table used, the date of valuation being taken as June 30, 1921, in every case.

Table for Valuing Indeterminate Disabilities.

Months elapsed from date of injury to date of valuation	*Ultimate incurred compensation in weeks
3	50
4	60
5	70
6	80
7	90
8	100
9	110
10	120
11	130
12	140
13	150
14	160
15	170
16	180
17	190
18	200
19	210
20	220
21	230
22	240
23	250
24	260
25	270
26	280

*To find the incurred cost in dollars, multiply the number of weeks by the weekly rate of compensation.

While the number of compensable injuries has increased from 25,754 in 1919 to 32,459 in 1920, due without doubt to the industrial activity and growth of the state, it is of more importance to learn that the average cost per case has decreased from \$218.29 for 1919, to \$195.53 for 1920. The significance of these figures, as a mark of the reduction in the average severity of industrial injuries in 1920, is accentuated when wage rates for the two years are compared. The average weekly wage in 1919 was \$26.76 and in 1920 was \$31.76. While a large part of this increase was in the wages of those who already exceeded the maximum upon which compensation is based, nevertheless this increase, taken alone, would have caused a higher average cost per case in 1920 than in 1919. Causes tending to reduce the average severity of industrial injuries have not only overcome the effect of increased wages on compensation cost, but have succeeded in bringing the average cost below that of 1919. Measured in terms of working days, the average loss per case of compensable injury was two hundred forty in 1919, and only two hundred in 1920, or a reduction of $16\frac{2}{3}$ per cent. The measurement of loss on this basis disregards wages in all cases and conditions of dependency in death cases. The reduction of $16\frac{2}{3}$ per cent in the average loss cost is, therefore, a true index of the reduction in the average severity of cases in 1920 from the average in 1919. Or, to put the matter another way, there were 25,754 compensable cases in 1919 involving an average loss of two hundred forty working days per case, or a total of 6,180,960 working days. In 1920 there were 32,459 cases with an average loss of two hundred working days per case, or a total of 6,491,800 working days. The increase in the number of compensable cases was 26.03 per cent, but in the total loss the increase was only 5.03 per cent.

Reference has been made to the increase in the average wages in 1920, and it is interesting to compare the average wages in the main divisions of industry for the two years, 1919 and 1920. They are as follows:

Main industrial division	Average weekly wages		Increase in 1920
	In 1919	In 1920	
All divisions	\$26 76	\$31 76	\$5 00
Agriculture	23 76	28 84	5 08
Mining and quarrying	26 75	31 08	4 33
Oil production	34 41	43 41	9 00
Lumber and wood	25 16	31 09	5 93
Metal and machinery manufacturing	27 51	31 17	3 66
Other manufacturing	24 66	29 31	4 65
Construction	30 81	35 21	4 40
Vessel operation	27 63	29 73	2 65
Railroad operation	26 64	31 39	4 75
Public utilities	26 73	31 54	4 81
Cartage and storage	26 01	31 03	5 02
Commercial enterprises	24 74	29 57	4 83
Care and custody of premises	20 79	25 08	4 29
*Miscellaneous	27 02	41 02	14 00

*The increase in this group to a large extent is due to the fact that in 1920 there were 247 persons out of 1385 injured, who received in excess of \$50 per week, as compared with 47 out of 1034 in 1919. Nearly half the injuries in this group were sustained in the motion picture industry with weekly wages in individual cases running as high as \$800 per week.

TABLE I.

Compensation Incurred on Account of Compensable Injuries by Extent of Disability.

Injuries causing—	Number of injuries ¹	Compensation paid and outstanding ²				
		Paid	Outstanding ³	Incurred	Per cent of total	Average per case
All injuries	32,459	\$3,624,722	\$2,721,936	\$6,346,658	100.0	\$195 53
Deaths	490	374,055	781,980	1,156,035	18.2	2,359 23
Permanent total disabilities	6	5,067	57,905	62,972	1.0	10,495 33
Permanent partial disabilities	1,923	1,077,504	813,313	1,890,817	29.8	983 26
Indeterminate disabilities	594	219,406	1,068,738	1,288,144	20.3	2,168 59
Temporary disabilities	29,446	1,948,670	1,948,690	1,948,690	30.7	66 18

¹Excludes injuries in exempt employments as well as other noncompensable injuries.

²Medical aid not included, as total of \$2,201,874 reported represents merely the aggregated medical paid in individual cases to the date of last report and does not include either medical paid under contract or medical outstanding.

³Outstanding compensation based upon tabular valuation.

TABLE III.

Severity Rating of Compensable Injuries.

Injuries causing—	Number of Injuries	Weighting in work-ing days	Severity rating ¹	Total rating	Per cent of total
All injuries -----	32,459	200	6.25	203,022.1	100.0
Deaths -----	490	¹ 6,000	187.56	91,875.0	45.3
Permanent total disabilities -----	²	¹ 6,000	187.50	1,125.0	.5
Permanent partial disabilities -----	1,923	² 798	24.94	47,959.6	23.6
Indeterminate disabilities -----	591	³ 1,757	54.91	32,616.5	16.1
Temporary disabilities -----	29,446	⁴ 32	1.0	29,446.0	14.5

¹Weighting recommended by committee on statistics and compensation insurance cost of the International Association of Industrial Accident Boards and Commissions.

²Weighting based on relation of each case to permanent total disability.

³Weighting based on relation of tabular valuation of disability duration to value assigned to permanent total disability.

⁴Weighting based on actual time lost.

⁵Rating in multiples of one temporary injury.

TABLE IV.

Permanent Disabilities by Impairment of Earning Capacity.

Impairment of earning capacity (Per cent)	Number of cases	Impairment of earning capacity (Per cent)	Number of cases
All cases -----	1,929	46-50 -----	10
1-5 -----	720	51-55 -----	14
6-10 -----	408	56-60 -----	8
11-15 -----	205	61-65 -----	5

Striking against	3,858	2	27	9	1,071	654	2,095	101,304
Nails	545		4		122	95	324	6,987
Splinters or sharp projections from walls or structures	216		3		55	36	122	3,535
Persons	58		1		22	7	28	1,955
All other objects	3,039	2	19	9	872	516	1,621	88,827

*See footnote to Table III, page 67, for method of determination.

TABLE XII—Continued.
Part 1B. Causes of Injuries by Extent of Disability—All Industries.

Causes	Total	Deaths	Permanent disabilities	Indeterminate disabilities	Number of Injuries			*To all days lost
					15 days and over	8 to 14 days	1 to 7 days	
Falling objects—not being handled by injured—all—	5,688	67	108	49	2,082	862	2,520	675,214
Collapse of—	224	9	1	2	101	36	75	64,350
Buildings and walls—	31	3			23	4	1	19,224
Stones, sand and earth—	12				6	1	5	400
Piles (stacked, stored or piled-up material)—	48	3	1	2	17	9	16	23,489
Scaffolds or staging—	32	3			17	3	9	18,600
Chutes, conveyors and slides—	6				3	1	2	67
All other—	95				36	18	42	2,570
Objects falling from elevation—	4,526	16	78	35	1,610	698	2,089	298,177
Bins and pockets—	3				1	2	91	91
Buildings—not in course of construction or demolition—	13				6	3	4	365
Buildings—in course of construction or demolition—not otherwise classified—	100				39	7	54	2,000
Chutes, conveyors, slides and screens—	66	1	4		27	12	22	18,740
Machines or work benches—	214		7	3	70	31	103	12,015
Piles (stacked, stored or piled-up material)—	386	1	2	3	168	55	157	22,180
Racks and shelves—	51		1		12	9	29	3,880
Runways, balconies and platforms—	5				2		3	163
Scaffolds and staging—	63		1		17	15	30	1,792
Trestles and tramways—	6				2		4	133
Other elevations—	3,619	14	63	29	1,266	564	1,683	236,818
Objects falling into excavations—	10				4	1	4	780
Into excavations (not tunnels, mines or quarries)—	161	4	1		69	19	67	30,697
Cave-ins (not mines or quarries)—	18	1	2		7	3	7	6,432
Of ditches and trenches—	4				1	1	1	638
Of tunnels—	139	3	1		61	15	59	23,627
Of other excavations—	375	15	8	2	115	55	180	106,396
Objects falling in mines, quarries and tunnels (inside)—	28				8	6	14	319
Roof in entries—	165		2		50	29	83	6,743
Coal, rock or ore at working face—not roof—	46	6		1	18	1	20	37,112
Roof in working places—not stopes—	23	1	1		8	4	9	7,148
Coal, rock or ore from pillars or ribs—not roof—								
Coal, rock or ore from or in underground chutes, manways, and batteries—	27		1		10	4	12	844
From surface into shaft—	6				3	1	2	155

REPORT OF INDUSTRIAL ACCIDENT COMMISSION.

	6	5			1
Cave-in of mine-----	17	5			1
Timbers--not in handling-----	15				12
Ore and rock in stopes (metal mines)-----	42	3			7
All other-----	392	23			20
Other falling objects-----					105
Trees in felling--not otherwise classified. Include dead limbs and tops-----	71	6			18
Poles-----	15	1			4
Objects tipping over (except vehicles)--not in handling-----	68	3			28
Trees, lodged in felling (include trees and limbs struck by felled tree)-----	49	3			14
Trees, not in felling-----	5	1			
Limbs, not in felling-----	25	1			
Logs rolling-----	159	8			
Falls of persons--all-----	9,465	71			
Falls of persons from elevations-----	4,619	62			
Gangplanks-----	29	1			
Loading platforms-----	29				
Benches, boxes, chairs and tables-----	153				
Bridges, dams or docks (not in construction or demolition)-----	23	1			
Buildings in construction or demolition-----	59				
Cranes, derricks, elevators and hoists in erecting and rigging-----	25	1			
Floors, temporary-----	17				
Ladders (account breaking of ladder or parts)-----	61				
Ladders, all other-----	870	11			
Boilers, engines and machines-----	53				
Piles-----	198	3			
Trees and poles-----	185	6			
Roofs-----	93	3			
Runways, balconies and platforms (not loading platforms)-----	211	2			
Scaffolds and stagings (all other causes)-----	423	10			
Stairs and steps-----	619	4			
Trestles and tramways-----	38	2			
Windows or wall openings-----	12	2			
Elevated bins, pockets and tanks-----	22				
Scaffolds and stagings (account breaking of tackle or support)-----	104	3			
Scaffolds and stagings (account breaking or slipping)-----	270	5			
All other elevations-----	1,120	8			
Falls of persons into excavations, pits, etc-----	573	5			
Bins and vats containing hot or corrosive substances-----	14	1			
Bins and vats, all other-----	28				
Floor openings (not elevator shafts)-----	124	1			
Manholes-----	48				
Excavations and openings--not otherwise classified-----	359	2			
Falls of persons on level-----	4,273	3			
Stumbling over fixed objects-----	241	4			
Slipping-----	3,029	3			

*See footnote to Table III, page 67, for method of determination.

TABLE XII—Continued.
Part 1B. Causes of Injuries by Extent of Disability—All Industries.

Causes	Number of injuries					*To all days lost		
	Total	Deaths	Permanent disabilities	Indeterminate disabilities	Temporary disabilities			
					15 days and over		1 to 7 days	
Stumbling over loose objects-----	901	1	9	14	332	142	404	56,563
All other-----	102	3	195	22	49	13	42	7,663
Hand tools--all-----	6,623	2	86	13	1,616	1,090	8,697	318,280
Glancing or slipping of tools in use-----	5,269	2	6	1	1,397	926	2,845	155,644
Breaking or coming apart of tools-----	176		100	7	33	28	108	10,363
Flying rivets, nails, chips and other particles set in motion by tool-----	1,033	1	3	1	136	105	684	146,508
All other-----	145		22	24	50	31	60	5,765
Animals--all-----	1,471	20	21	23	647	201	557	209,812
Horses, mules and oxen-----	1,346	20	2	8	613	178	491	205,315
Kicks-----	443	3	6	7	198	61	171	44,531
Runaways-----	236	8	13	8	121	28	66	69,854
Bites-----	8	9	1	1	34	23	68	4,497
All other causes-----	659		113	115	3,147	956	2,353	1,604,803
Other animals and insects--all causes-----	125		48	35	642	271	587	637,006
Vehicles (operation, not construction of)--all-----	6,867	78	10	8	107	44	93	180,242
Cars and engines--steam and electric railways-----	1,661	26	7	3	53	22	48	98,067
Train wrecks-----	288	13	3	4	51	22	41	76,973
Collisions-----	146	11		1	2		1	2,160
Derrailments-----	132				1		3	12,042
Sideswipes-----	4	2	10	18	397	179	388	141,189
Car striking object on track without derailling-----	6	12	3	4	67	29	79	18,864
Falls from or in cars or engines-----	1,004	1	1	1	55	24	54	11,852
In getting on or off, in motion-----	189			1	45	35	67	4,152
In getting on or off, at rest-----	156			1	44	17	32	33,754
While riding on, due to sudden stop or start-----	148	5		1	4	4	1	6,322
While riding on, due to slipping or loss of balance-----	99	1			19	6	19	2,792
While riding on, contact with overhead structure-----	10				163	64	136	63,453
While riding on, contact with side structure-----	45	5	6	8	104	80	57	283,491
Falls--not otherwise classified-----	384	37	10	2	25	9	10	60,758
Struck by or caught between cars-----	62	7	3		6	4	8	41,024
While coupling or uncoupling-----	63	6	2		3		2	5,377
While switching-----	27		2		7		3	
While repairing cars or engines-----	7		1		4		2	
While repairing track-----	12	2					3	14,054

While crossing track-----	20	5	---	---	---	8	2	5	30,542
While standing or walking on track-----	42	7	2	4	4	14	4	11	56,411
All other-----	91	10	8	9	9	44	9	18	75,325
Other causes in connection with cars and engines-----	107	3	2	2	1	34	18	49	23,084
Setting or releasing hand brakes (exclude falls due to)-----	32	---	1	---	---	10	5	16	645
Objects falling from (not in loading or unloading)-----	22	1	1	---	---	5	4	11	6,910
Objects shifting on load-----	16	---	---	---	---	9	1	6	470
All other-----	37	2	---	---	1	10	8	16	15,069
Plant trucks on tracks. Mine and quarry cars and motors (animal or power drawn)-----	221	7	5	1	1	97	25	86	55,754
Caught between and overhead obstruction-----	1	---	---	---	---	1	---	---	92
Collisions-----	6	2	---	---	---	1	1	2	12,085
Deraillments-----	80	1	1	---	---	15	3	10	7,274
Falls from, due to sudden start or stop-----	10	---	---	---	---	4	1	5	353
Riding on, contact with rib or side structure-----	3	---	---	---	---	3	---	---	87
Struck by or caught between--while repairing track-----	2	---	---	---	---	1	---	1	51
Struck by or caught between--while standing or walking on track-----	58	1	1	---	---	26	4	26	9,244
Coal, rock, etc., falling from car--struck by (not in loading or unloading)-----	14	---	---	---	---	3	2	9	446
Lifting or pushing car-----	11	---	---	---	---	5	1	5	143
Getting on or off car-----	7	---	---	---	---	4	1	2	173
Caught by car or load in dumping-----	18	1	1	---	1	6	2	7	8,398
Coupling or switching--struck by or caught between-----	10	---	---	---	---	6	2	2	195
Falls from, not otherwise classified-----	1	1	---	---	---	6	2	2	6,000
All other-----	50	1	2	---	---	22	8	17	11,213
Automobiles and other power vehicles-----	3,926	66	52	57	---	1,916	497	1,338	649,544
Collision due to breaking of parts-----	4	---	---	1	---	3	1	---	104
Overturning, due to breaking of parts-----	40	---	---	---	---	17	7	15	2,671
Overturning, due to skidding-----	82	---	---	---	---	46	11	25	2,286
Collision with cars or engines-----	155	16	8	3	---	54	16	58	118,763
Collision, all other causes-----	423	10	6	8	---	184	70	145	92,686
Collision, due to skidding-----	14	---	---	---	---	2	3	9	96
Overturning, all other causes-----	159	11	1	4	---	71	17	55	77,181
Cranking-----	1,676	1	17	12	---	930	175	541	84,119
Falls from-----	495	7	3	10	---	216	71	188	74,812
Struck by or caught between-----	659	21	10	16	---	300	89	223	180,484
Objects falling from (not in loading or unloading)-----	49	---	---	---	---	22	6	21	1,022
Load shifting-----	18	---	---	---	2	10	1	5	4,566
All other-----	152	---	7	---	---	61	30	53	10,834
Bicycles-----	93	1	1	1	---	31	13	46	10,090
Breaking of parts-----	6	---	---	---	---	3	1	2	149
Collisions (all kinds)-----	46	1	1	1	---	18	4	21	9,557
All other-----	41	---	---	---	---	10	8	23	384

*See footnote to Table III, page 67, for method of determination.

TABLE XII—Continued.
Part 1B. Causes of Injuries by Extent of Disability—All Industries.

Causes	Number of injuries						*To all days lost	
	Total	Deaths	Permanent disabilities	Indeterminate disabilities	Temporary disabilities			
					15 days and over	8 to 14 days		1 to 7 days
Animal-drawn vehicles (not mine or quarry cars)-----	662	11	3	16	329	108	195	115,364
Collision with cars or engines-----	13				5	4	4	303
Collision with other vehicles-----	9				1	2	5	6,066
Collision with stationary objects-----	4							1,732
Overturning-----	44	2	1	3	23	6	1	19,659
Whiffletrees-----	1				1		9	115
Falls from-----	433				216	70	132	57,891
Struck by or caught between-----	98	5	1	9	49	16	29	18,983
Objects falling from (not in loading or unloading)-----	21	2	1	2	10	3	5	8,847
Objects shifting on load-----	7	1		1	4	2	1	732
Breaking of vehicles or some part thereof-----	7				5		2	350
All other causes-----	25				13	5	7	686
Animal-drawn implements (not machinery)-----	236	5	1	4	108	37	81	41,339
Caught by or in (scrapers, plows, harrows, rollers, etc.)-----	199	4	1	2	91	32	69	31,662
All other-----	37	1		2	17	5	12	9,677
Water craft-----	62	11	3	1	23	5	19	71,655
Collision with vessels-----	4	2			1		1	12,045
Capsizing-----	5	5						30,000
Falls from or jumping overboard-----	25		2		10	2	11	3,641
Falls from rigging-----	2	1			1			6,015
Falls into hatchways-----	11				6	2	3	290
Shipwrecks not otherwise classified-----	2	2						12,000
All other-----	13	1	1	1	5	1	4	7,664
All other vehicles-----								
Aeroplanes—not otherwise classified-----	6	4			1		1	24,051
Explosions, electricity, fires and hot substances—all-----	3,316	81	47	22	1,039	574	1,493	646,123
Explosives of explosive substances-----	574	25	19	9	206	92	223	222,242
Explosives, explosion of, in manufacturing and storing-----	1							1
Explosives, explosion of, in transporting and handling-----	16	2	1		5	2	6	14,104
Blasting—premature shot-----	12	3	2		3	1	3	25,941
Blasting—misfires or delayed shot-----	14	2	3		7		2	19,952
Blasting—windy shot (ignition of surrounding gas or dust)-----	1							3
Blasting—tamping-----	1	1					1	6,000
Blasting—all other-----	45	5	6	2	16	7	9	51,212
Dust—explosion of-----	3				1	1	1	28
Gas—explosion of-----	179	3		2	59	29	86	23,994
Gasoline and other petroleum products, explosion of-----	151	7	3	5	59	31	46	61,079

	3	19	7	3	8
Ammonia apparatus, explosion of (tanks, compressors, condensers, piping and valves)-----	63	2	7	34	10,122
Other high pressure apparatus, explosion of (include bursting under pressure)-----	8	6	1	1	197
Blasting—struck by flying objects (not above specified)-----	77	2	13	30	9,601
All other explosions-----					
Electricity-----					
All other-----	489	13	54	225	313,146
Conflagrations-----					
All other-----	17	1	1	1	27,027
Hot substances and flames-----	2,286	15	427	1,044	83,703
Hot water-----	438	1	147	206	26,157
Asphalt, pitch and tar-----	221	3	100	70	7,109
Other hot liquids-----	292	2	106	126	6,781
Molten metal, explosion of-----	38	1	7	18	3,939
Molten metal or slag (all other causes)-----	115		41	53	1,740
Flames and flare-backs—all other-----	409	2	152	171	21,276
Flames and flare-backs—ignition of clothing-----	8		5	3	135
Molten metal at furnace or cupola-----	11		5	3	170
Molten metal, pouring-----	203		74	94	3,340
Radiant heat from incandescent metal-----	14			14	32
Metal, hot but not molten—handling of-----	21		7	12	196
Oxy-acetylene or electric cutting and welding-----	55	2	2	39	3,776
Hot surfaces and all other hot objects—contact with-----	461	4	131	286	9,031
Poisonous and corrosive substances-----	967	12	216	596	42,932
Corrosive substances-----	478	8	94	314	18,162
Caustic stuffs, alkalies, acids, quicklime-----	447	6	88	294	15,879
All other-----	31	2	3	20	2,283
Poisonous substances-----	436	4	114	240	24,322
Poisonous gases-----					
All other-----	53		8	42	448
Machinery—all-----	8,410	961	2,610	3,633	1,616,883
Boilers and steam pressure apparatus-----	111	1	18	58	7,387
Steam boilers—explosion of-----	5	1	2	2	6,094
Steam boilers—all other causes-----	1			1	6
Steam pipes—explosion of-----	9		4	1	155
Steam pipes—all other causes-----	54		12	36	505
Steam and hot water gauges—explosion of-----	4		1	1	48
Economizers and superheaters—explosion of-----	1		1		21
Steam boilers—escaping steam and hot water-----	7		4		210
Other steam-pressure apparatus—explosion of-----	2		1	1	40
Other steam-pressure apparatus—all other causes-----	28		9	15	306

*See footnote to Table III, page 67, for method of determination.

REPORT OF THE INDUSTRIAL ACCIDENT COMMISSION FROM JULY 1, 1921, TO JUNE 30, 1922.

HON. WM. D. STEPHENS,

Governor of the State of California.

DEAR SIR: In obedience to the requirements of section 88, chapter 176, Laws of 1913, we submit herewith a report covering the work of the Industrial Accident Commission in administering the Workmen's Compensation, Insurance and Safety Act of the State of California during the year ended June 30, 1922.

Personnel.

The Industrial Accident Commission during the year consisted of the following members: Will J. French, chairman; A. J. Pillsbury and A. H. Naftzger, members.

The heads of the various departments during the year were: H. L. White, secretary; J. S. Thomas, assistant secretary; F. W. Fellows and L. O. Adams, assistant secretaries (Los Angeles office); A. E. Graupner, attorney; F. B. Lord, manager Compensation Department; Dr. Morton R. Gibbons, medical director; Dr. R. W. Harbaugh and Dr. F. E. Raynes (San Francisco) and Dr. H. E. Southworth (Los Angeles), assistant medical directors; C. W. Fellows, manager State Compensation Insurance Fund; H. M. Wolflin, superintendent of Safety Department; W. P. Ratliff, statistician and superintendent of Department of Self-Insurance; R. E. Haggard, superintendent of Permanent Disability Rating Department.

Placement of Injured Workers.

Because of the great number of cases in which injured persons have so far advanced toward recovery as to be able to do work of a lighter character than that in which they were engaged at time of injury, and for the further reason that such light work, though highly desirable, is in most instances not easily obtainable, the need for a placement or welfare bureau has become very urgent. No concerted effort has as yet been made for its establishment, though some employers (who are self-insurers) and insurance carriers have from time to time been able to find temporary employment for their own injured employees of a nature which they were able to do. One concern which is writing compensation insurance coverage has, in fact, had a welfare worker employed part of the time for several months past in securing the placement of the partially incapacitated, though the efforts put forth have not been crowned with all the hoped for success. This partial failure is chargeable largely to lack of co-operation on the part of employers or their representatives. Too often the employer believes his entire responsibility has been discharged when he carries insurance coverage or when he has paid compensation, not taking into consideration the fact that reduced payments based on partial disability may be inadequate for the injured person's bare living expenses, even when there is no family dependent. Partial compensation payments are provided by the law upon the theory that when an injured person has so far recovered as to be able to do any work his earnings in light employment will, when added to the partial

indemnity, be adequate to meet ordinary living expenses. Theoretically, this plan is a good one, but, practically, it only works out in a very small proportion of cases. Light work, such as an employee who is convalescing may be able to do, is very proper, but the great problem is to get it for him. This statement applies not only to the temporarily partially disabled. It also applies to those who have suffered permanent partial disabilities. Without co-operation on the part of employers and those who underwrite the employers, responsibilities under the law little relief can be looked for. With such cooperation society will be the better served, for there is scarcely an injured person who will be unable to repay, in gainful service, for any effort put forth in his behalf.

In this connection it may be of general interest to remark that those of us who, through the years, hear the stories of the injured victims in the great industrial struggle, are impressed with the fact that tabulated statements of broken limbs and empty-eye sockets do not tell it all. Maimed bodies are more than disabled broken-down machines for the making of products for the market. Loss of wages is not the only loss when ability to perform physical labor is lost. A broken body very often means a broken mind. Damage to an eye is potent also in marring the vision of the heart; a crippled foot often means a limping spirit. An injured spine not only disqualifies for resuming a place at the factory, but it may also make the victim unfit for society. The suffering of bodily injuries is frequently attended with a sense of injustice, with a feeling that a great wrong has been committed. There is aroused an instinctive conviction that one has been robbed of something for which the meagre benefits provided by statute are far from being adequate substitutes.

It is the fact that the body is machinery not only for the production of material wealth, but also the instrument by means of which the thought and sentiments which enter into the warp and woof of our social life are produced, which renders this whole field of compensatory legislation and its administration so vital. The economic loss attendant upon a disabling industrial injury is serious enough, but when there is added the further loss of good will toward employer, whom the injured very often holds responsible for the damage, and the feeling of rebellion against everything and everybody in general is generated in the mind, we are presented with results that far transcend in importance mere profit and loss expressed in dollars and cents. The loss of an arm resulting in loss of ability to use a carpenter's saw is only a fraction of the damage. When such physical injury (as it does in many instances) also interferes with right thinking about some of the fundamental relations to society, the seriousness of the mischief done assumes a tragic form.

In the light of this larger relationship of industrial injuries the contents of this annual report of the work of the Industrial Accident Commission should add to the appreciation of the importance of the law and furnish incentive to all concerned to put forth increasing effort to comply fully with its letter and spirit.

Commutations and Compromises.

Without formal proceedings, but upon the basis of agreements which were filed, the Industrial Accident Commission during the year past investigated and approved 404 commutations and compromises covering death and permanent disability claims. The preceding year showed 423

such approvals. The approvals this year were inclusive of five life pension cases two of which were rated at 100 per cent. The remaining three showed respectively, $75\frac{3}{4}$, $78\frac{1}{4}$ and $79\frac{3}{4}$ per cent loss as compared with total.

One total disability rating was for the enucleation of both eyes with compensation at the maximum rate. Had payments for this disability been made in weekly installments over the normal life period, the total amount payable would have been \$24,523, and the period covered by them would have approximated thirty-four years.

Of the total approvals 21 were on account of deaths, 182 were for permanent disabilities, 195 were compromises, and 6 were later taken up with the Commission for formal adjudication.

In the death cases 14 were commutations and 7 compromises, the compromises having become necessary because of questions as to cause of death, dependency or extent of same and jurisdiction of the Commission. Fourteen widows, 16 children and 13 other dependents were benefited. The total amount payable was \$67,340.61, of which \$18,632.54 had been paid prior to agreements. Amount commuted \$32,796.13, leaving total balance of \$15,749.88 still to be paid.

The reasons for commutations were:

Improve property.....	1
Buy homes.....	3
Pay off mortgages.....	2
Repair or improve homes.....	1
Pay debts.....	4
Return to former home or leave state.....	4
Engage in business.....	1
No reason other than compromise.....	5

Compromises in 189 of the 195 cases were for the following reasons:

Question of whether employee.....	1
Wilful misconduct of employee.....	2
Question of injury occurring.....	18
Arising out of occupation.....	2
Settlement.....	32
Dispute over medical treatment.....	20
Preexisting disease.....	11
Statute of limitations.....	17
Neurosis.....	10
Hernia.....	5
Third party settlement.....	20
Business opportunity.....	21
To leave state before discharged by doctor.....	29
Build home.....	1

Six settlements provided that the employer furnish surgical operations and hospital treatment, the injured foregoing any claim for indemnity payments.

In these compromises \$86,560.74 had been previously paid, and the amount involved was \$125,814.53.

The permanent disabilities for which commutations were granted follow:

Loss of members.

Multiple finger injuries to one hand including amputations	10
Loss of fingers, one hand	18
Part or all of one finger	8
Hand	6
Arm	6
Leg	10
Toes	1
Both legs	1

Loss of function.

Fingers	14
Hand	4
Wrist	5
Elbow	5
Shoulder	4
Arm	3
Ankle	9
Foot	1
Knee	5
Hip	1
Leg	6
Neck	1
Both legs	8
Enucleation, one eye	11
Enucleation, both eyes	1
Loss of sight, both eyes	1
Loss of sight, one eye	9
Spine, pelvic, sacroiliac injuries	10
Hemiplegia	1
Multiple injuries	6

Reasons for commutations were given as follows:

Buy or build home	13
Buy ranch or other property	11
Hotel or rooming house	3
Mortgage	18
Repair or improve home	2
Pay debts	30
Return to former home or leave state	40
Engage in business	47
Trip	8
Improve ranch property	7
Buy and improve town property	8
Improve town property	2
Clothes, dental bills, etc.	9
Paid into State Fund as Trustee	3
Stocks, bonds, etc.	1

The excess in number of commutations over number of ratings is due to the fact that in some instances more than one partial commutation was permitted.

The destinations of 40 injured persons who wished to leave the State are listed below:

Mexico.....	6
Italy.....	6
Canada.....	3
Malta.....	1
France.....	1
Spain.....	1
Greece.....	1
Germany.....	1
Switzerland.....	1
Roumania.....	1
Sweden.....	1
Alaska.....	1
Scotland.....	1
China.....	1
Azores Island.....	1
Other States of the United States.....	13

The 47 business ventures included:

Grocery stores.....	5
Contracting.....	5
Poultry business.....	4
Small apartment house or rooming house.....	3
Auto truck.....	3
Cabinet or carpenter shop.....	3
Motion picture studio.....	2
Cigar store and pool room.....	2
Battery service.....	2
Hardware.....	1
Dressmaking establishment.....	1
Buy and sell live stock.....	1
Bakery shop.....	1
Cigar, grocery, soft drinks.....	1
Shoe.....	1
Mechanical dental laboratory equipment.....	1
Lumber company investment.....	1
Bootblack stand.....	1
Painting and paper-hanging.....	1
Upholstering.....	1
Brick cleaning.....	1
Photography.....	1
Planing mill.....	1
Furniture.....	1
Ladder manufacturing.....	1
Blacksmith shop.....	1

The total value of the 182 permanent disability ratings is shown to be \$475,363.73, of which \$167,808.85 has been paid prior to commutations. The amount commuted equalled \$181,729.42, leaving still to be paid \$107,644.85.

REPORT OF INDUSTRIAL ACCIDENT COMMISSION

Statement of Expenditures for the Period July 1, 1921, to June 30, 1922.

SELF-INSURANCE DEPARTMENT.

During the seventy-second fiscal year certificates of consent to self-insure were issued to twenty-six employers. This makes a total of 263 certificates issued since January 1, 1918, the date on which the requirement of security for the payment of compensation became effective. During this period 52 of those granted certificates have requested revocation for various reasons, leaving 211 certificates in effect on June 30, 1922. Approximately 195,143 employees are protected under these certificates by security in the form of surety bonds or collaterals to the amount of \$3,652,000, deposited with the State Treasurer. In no instance has the Commission found it necessary to revoke its certificate for failure to maintain required security and all payments of compensation have been made without recourse to deposited securities.

LEGAL DEPARTMENT FOR FISCAL YEAR 1921-1922.

The work of the legal department during the fiscal year 1921-1922 has been somewhat varied and involved much labor. The following table will best summarize the proceedings before the courts:

Petitions for writ of review and writs pending action before the appellate courts of the state, on July 1, 1921.....	12
Proceedings pending before the United States Supreme Court on July 1, 1921.....	1
Petitions for writ of review filed in the state appellate courts during fiscal year.....	53
Petitions for writ of review denied during fiscal year.....	26
Petitions for writs of review issued during fiscal year.....	26
Awards of Commission affirmed during fiscal year.....	14
Awards of Commission annulled during fiscal year.....	10
Petitions for writs of prohibition filed during fiscal year.....	2
Petition for writs of prohibition dismissed during fiscal year.....	1
Petitions for writs of prohibition denied during fiscal year.....	1
Petitions for rehearing filed by petitioners.....	16
Petitions for rehearing filed by respondents.....	2
Petitions for rehearing denied during fiscal year.....	14
Petitions for rehearing granted during fiscal year.....	1
Petitions for rehearing pending June 30, 1922.....	3
Petitions for writs of review and writs pending action before the appellate courts of the state on June 30, 1922.....	15
Cases decided by the Supreme Court of the United States during fiscal year.....	1
Writs of error granted to Supreme Court of the United States during fiscal year.....	2
Writs of error pending in the United States Supreme Court June, 30, 1922....	2

A reading of the foregoing tabular analysis of litigation will show that on petitions filed to review the proceedings of the Industrial Accident Commission, the awards of the Commission were sustained in 41 cases, and annulled in 10 cases. This is a marked tribute to the fairness of the Commission in making its awards. During the year, the Commission decided 2277 claims. The foregoing tabular statistics show that only 53 awards were sought to be overturned by petitions for writs of certiorari. Thus it appears that only .023 per cent of the awards made by the Industrial Accident Commission were so unsatisfactory to the parties to the proceedings before the Commission that they sought to overturn the decisions, and in only .004 per cent was the Commission reversed in its awards.

In the report for the fiscal year 1920-1921, attention was called to the case of the *Yosemite Lumber Company vs. Industrial Accident Commission* (S. F. No. 9556). This case was decided by the Supreme Court of the state adverse to the Commission, by decision rendered on January 27, 1922. This case involved the constitutionality of chapter 183, Statutes of 1919, commonly known as the "Industrial Rehabilitation Act". The main ground for the adverse decision, as set forth in the opinion of the court, was that under section 21 of article XX of the state constitution, the Industrial Accident Commission was without jurisdiction to make an award in favor of any other party than a dependent. The decision of the court did not determine the whole act to be unconstitutional, and left undecided the legality of the principal features of the act, viz, the right of the state to collect the liability of \$350 imposed by the statute and to disburse the fund thereby created for the benefit of persons disabled in industry. To determine the constitutionality of the principal features of the act, proceedings were filed in the name of the people of the State of California on behalf of the State Controller and the Indus-

trial Accident Commission against the Yosemite Lumber Company, in the Superior Court of the State of California in and for the county of Sacramento, on March 14, 1922. The demurrer to the complaint was sustained and judgment entered thereon. Appeal was taken to the Supreme Court to determine the constitutional questions and much time and labor has been spent by the legal department upon the briefing of the complex questions involved.

In two other cases brought by the *Madera Sugar Pine Company vs. Industrial Accident Commission*, the petitioner has raised the constitutionality of the provisions of the Workmen's Compensation, Insurance and Safety Act of 1917, which permits the recovery of compensation by a nonresident alien dependent. Writs of review were denied by the Supreme Court of the state and the petitioners have carried the two cases to the Supreme Court of the United States on writs of error. The questions involved are new and undetermined, and will be presented to the court in the spring session of 1923.

During the year, there have been two prosecutions for violation of safety orders, both of which have resulted in the conviction of the employers guilty of the use of flagrantly unsafe appliances.

COMPENSATION DEPARTMENT.

The function of the Compensation Department is to determine whether the injured employee is entitled to compensation. Final decision in every case must be made by the Commissioners but where 2277 disputes are to be settled in a single year it is physically impossible for three Commissioners to hold the necessary 2730 hearings, take the evidence and decide the disputes.

The Commission has therefore established, in addition to the main office at San Francisco a branch office at Los Angeles, which with the slight exception of making the final decision does all the work connected with claims filed in that office. In addition to the above the Commission maintains at Eureka, Fresno, San Bernardino and San Diego, representatives whose duty it is to advise injured employees, and hold trials in the cases arising in their localities.

It is often necessary to take the evidence of witnesses outside of the state, and sincere thanks are due to the Industrial Commissions of other states for giving their services in holding hearings and obtaining evidence because the information obtained by oral examination is infinitely more reliable than where set questions are used.

The record of a case being completed by the above means it goes to the Commission for final decision and award. The number of claims decreased slightly during the last fiscal year (32 cases) but the volume of work accomplished was much larger, 2277 cases being decided as against 2056 the previous year, requiring ten hearings for each full working day.

Time Consumed in Deciding Cases—July 1, 1921, to June 30, 1922.

Days	Number of cases	Per cent	Cumulative per cent	Number of days
Less than 10.....	51	2.2	2.2	224

Classification as to Decisions in Decided Cases—July 1, 1921, to June 30, 1922.

	Tem- porary	Perma- nent	Fatal	Total	Per cent
Compensation awarded.....	684	223	353	1,260	55.3
Compensation denied.....	559	39	53	651	28.6
Cases settled.....	63	16	26	105	4.6
Cases dismissed.....	191	24	46	261	11.5
Totals.....	1,497	302	478	2,277	100.0

Claims pending June 30, 1921.....	654
Claims filed July 1, 1921, to June 30, 1922.....	2,187
Total claims before commission.....	2,841
Claims adjudicated.....	2,277
Claims pending June 30, 1922.....	564

The percentage of cases in which compensation was awarded decreased slightly (55.3 percentum against 58.9 percentum). At the same time denials increased (27.8 percentum to 28.6 percentum). Such a condition naturally ensues as the precedents become established because the insurance carriers reject fewer cases.

Classification as to Principal Question Involved in Decided Cases, July 1, 1921, to June 30, 1922.

Principal questions involved	Awarded	Denied	Settled	Dismissed	Total

PERMANENT DISABILITY RATING DEPARTMENT.

The Permanent Disability Rating Department determines the degree of physical impairment resulting from injuries of a permanent nature. This is done by referring to a "Schedule for Rating Permanent Disabilities," which correlates the nature of the permanent disability with the age and occupation of the injured workman at the time of his injury.

The occupation is an important factor in determining the proper amount to allow for a permanent disability, because what might be a serious disability in one occupation will not be such a serious disability in some other occupation. Age is also an important factor, because the older a man is the harder it is for him to adjust himself to new conditions and to overcome the handicap in his earning capacity caused by his permanent disability. For this reason the rating schedule, in general, allows a higher percentage for permanent disability as the injured workman becomes older.

During the calendar year of 1921 there were 2481 new cases considered for permanent disability rating. Many of these cases are disabilities of several years standing. In many cases the degree of permanent disability can not be determined for a considerable time after the date of injury. Among the 2481 cases rated during 1921 there were 12 cases of injuries sustained during the year 1916, 21 cases of injuries sustained during the year 1917, 65 cases of injuries sustained during the year 1918, and 190 cases of injuries sustained during the year 1919. The remainder of the 2481 cases are about evenly divided according to the year of occurrence between the years of 1920 and 1921.

The above total does not include numerous cases where a rerating was given. In some instances a case is rerated as many as four or five times. This is largely due to a change in a condition which was previously assumed to be permanent but which time has shown not to have been permanent.

The ratings are ordinarily made upon the information contained in the injured workman's application for rating and the report of the attending or examining physician. Experience has shown that it is highly desirable that these medical reports be reviewed, if possible, by a medical man associated with the Medical Department of the Industrial Accident Commission. At the present time there is a surgeon in San Francisco and one in Los Angeles whose principal duty is the checking of the surgeons' reports filed with the permanent disability rating petitions.

For cases too far away from San Francisco or Los Angeles for personal examination by our Medical Directors, a card is sent the injured workman with the doctor's description of the disability, and the workman is asked to describe in his own words the nature and extent of his permanent disability. If there is a discrepancy between the injured workman's description and that of the reporting surgeon, further information is requested from the doctor on this point. After the report is approved by the Medical Director the file is sent to the rating expert to determine the percentage of permanent disability existing.

The results of the Medical Directors' supervision is given in the following summaries:

San Francisco office.

1. All disabilities not mentioned.....	165
2. All disabilities not mentioned and too early for rating.....	2
3. Too early for rating.....	3
4. Disabilities mentioned but inadequate description.....	163
5. Surgeons' report and findings in this office substantially the same.....	418
6. Applicant requested to call but failed to do so.....	13
7. No report from surgeon.....	45
8. Additional information requested and obtained from surgeon.....	1
9. Approved without examination.....	3
10. Examinations made at request of Compensation Department.....	87
Total.....	900

Los Angeles office.

1. All disabilities not mentioned.....	86
2. Surgeons' report and findings in Los Angeles office substantially the same.....	497
3. Disabilities mentioned but inadequate description.....	84
4. Applicant requested to call, but failed to do so.....	17
5. No report from surgeon.....	4
6. Approved without examination.....	109
Total.....	797

The purpose of the above examinations is to make a comparison between the report of the attending surgeon and the findings by the Commission's Medical Examiners.

Outside Cases.

1. Cards returned.....	385
2. Cards not returned.....	71
3. No card sent.....	110
4. Additional information requested and obtained from surgeon.....	22
Total.....	588

In the above cases a card of inquiry is sent to the applicant so that he may give us a description of his disability for comparison with the attending surgeon's report.

If there is any marked difference in the two reports the matter is taken up by correspondence in order to clear up any apparent discrepancy, and to determine whether or not a further examination is necessary.

REHABILITATION DEPARTMENT.

The work of this department practically ceased April 6, 1921, pending the decision of the court upon the constitutionality of chapter 183 of the Statutes of 1919, which was delayed until January 27, 1922, when the Supreme Court of California, in the case of *Yosemite Lumber Company vs. Industrial Accident Commission*, held section 5 of the Vocational Rehabilitation Act unconstitutional in so far as it attempted to confer jurisdiction upon the Commission. Three months later, on April 27, 1922, a system of cooperation was established between the State Industrial Accident Commission and the Rehabilitation Division of the State Board of Education for the purpose of carrying on the reeducation and rehabilitation of disabled employees so far as the resources of the state board will permit.

The System of Cooperation.

A careful study is made of the reports of the employers, surgeons and insurance companies as they come in each day. In all cases in which incapacity is so great as to warrant supervision, duplicate reports are made to the Industrial Accident Commission and the Rehabilitation Division of the State Board of Education on a special form card which provides necessary information for both departments. These reports make possible the institution of proper morale work during the period of convalescence. From time to time further data, including the permanent disability rating, is added on these cards. Upon the closure of cases by the Rehabilitation Division, reports are made to the Commission giving a brief history of each case and the reason for closing the same. In those cases where, in the opinion of the vocational adviser, a lump sum settlement is advisable for rehabilitation or other purposes, the matter is taken up with the Industrial Accident Commission through this department.

The last case placed under training by this department was on April 6, 1921. All cases under training at that time were continued until September, 1921, and then transferred to the Rehabilitation Division of the State Board of Education for the completion of their training.

We also reported 388 additional cases from our files to the Rehabilitation Division. These 388 cases covered a period of approximately $4\frac{1}{2}$ years. All of these cases were of such a nature as to warrant re-education or rehabilitation, but it was found that many of them had already adjusted themselves to their physical disability and were satisfactorily employed. Others, who had failed to reestablish themselves in industry, are now under the care of the Vocational Board.

Since April, 1922, we have reported 1192 cases eligible for rehabilitation. This makes a total of 1580 such cases reported during the fiscal year.

This department also interviews injured employees in the hospitals in the San Francisco region and advises them of their rights. Special investigation work is also done for other departments of the Commission.

It is the hope of the Industrial Accident Commission that the Supreme Court may yet validate chapter 183 of the Laws of 1919 so that the work of reeducation of permanently injured workmen may be carried on as contemplated by the legislature, otherwise the compensation system, to the extent that it fails to provide such reeducation, must be and remain seriously inadequate to meet the needs of industrial life.

**Statistics Regarding Cases Submitted to the Rehabilitation Division During
the Fiscal Year Ending June 30, 1922.**

Total.....	30

INVESTIGATION OF DEATH BENEFIT CASES.

In line with a plan to understand better the effect of the State Workmen's Compensation, Insurance and Safety Act, the Industrial Accident Commission for some time has had visits made to families dependent as a result of industrial injuries. The purpose of these visits has been not only to learn the effect of the granting of death benefits, but to give the advice and counsel which mothers and relatives so often seek at the time of the death of the breadwinner.

This investigation has been carried on by a children's agent who has been appointed special agent of the Industrial Accident Commission and who has been assisted by other children's agents of the Bureau of Children's Aid, Department of Finance. The investigations are made according to counties; the agent going takes both the industrial accident cases, which are ready for investigation, and the state aid cases with her. The special agent in return investigates the state aid cases in addition to the fatal industrial accident cases. This year she has made 241 visits to state aid cases and has interviewed 29 cases in the office.

The total number of dependency records in the files of this department are 3536; 1084 cases have been investigated, 701 previous to this report, and 383 cases this year. In the uninvestigated files are 1047 cases of which number 141 are out to agents for investigation. Of the 1051 cases which have been dropped without further investigation 182 were dropped during this fiscal year for the following reasons: partial dependency 12; no dependency 93; injured not in the course of employment 41; unable to locate 26; and miscellaneous 10. There are 351 cases where the dependents are living out of the state. There are three cases we have no addresses for.

A plan is being made whereby these cases may be satisfactorily investigated by correspondence.

In addition to the regular routine investigation we have continued the statistical survey made in January, 1921. Since this last study we have investigated 383 cases, 317 of which are included in the present study. During this fiscal year we have investigated 332 cases of which number 36 were reinvestigations. The investigation of these cases required 359 visits to families and 81 office interviews.

The majority of these visits were for routine investigations which usually involved friendly visits assuring the families of the Commission's continued interest, and which secured for us the information necessary for our statistics.

Previous to this year we let at least a year elapse between the date of death and the date of investigation so that some result of the compensation act might be visible. However, we are finding it very helpful to supplement the Bureau of Information's correspondence with dependents, with a visit as soon after death as possible so as to forestall the advances of fee-seeking lawyers, to prevent misunderstanding and to safeguard the dependents' rights. We have made several visits to families before a decision was rendered in each case. The State Board of Control has also requested investigations in similar cases.

We try to make a follow-up visit within a year to assist in making plans for the future. It usually takes a year for the dependent to adjust herself, both mentally and financially, and often physically, to her changed status.

We give out whatever vocational information we have as to the training of women in schools and refer them to various lines of employment open to women. Twenty dependents have made requests for positions and have been referred to the proper cooperating employment bureaus. Twenty-five widows have made inquiries concerning free medical care. We have sent them to the clinic which was most interested in their particular ailments. Many of these dependents can meet their living expenses but are unable to save any money for doctors or dentists.

The compensation department has made requests for investigation and recommendations in applications for commutation of compensation. The majority of these requests for lump sum settlements are for the purchase of property, as will be shown in the following tables. The investigator in the course of her routine investigations has found cases where it was advisable to recommend commutation and has brought this to the attention of the compensation department. For example, one widow applied for a lump sum for the purpose of buying the furniture and business of an apartment house. This was granted and now the widow is able to bank \$150 a month after her living expenses are paid.

Unsatisfactory guardianship arrangements have been brought to light in several cases which necessitated a change of guardianship.

Six dependents asked to have their monthly compensation payments increased. This meant a shortening of the compensation period with interest deducted. These were investigated and the increase recommended. This year it has been necessary to recommend, in addition to the compensation, the granting of aid from the state appropriation for needy children in five cases. In three cases state aid is being paid where the dependent was made an award by the Commission but is receiving no compensation because the employer has carried no insurance and is without funds. In several cases, because of the long period before the rendering of a decision state aid has been granted.

A reinvestigation is made at the end of the compensation period to determine the adequacy of the compensation act, and to advise in plans for future welfare.

The following survey is the result of an intensive study of the records of 317 cases of dependency due to death through industrial accidents, to determine the actual living conditions of families receiving the death benefits. The information from these reports is divided into three groups, namely, compensation data, financial data and family data.

Under compensation data were considered the number of dependents, their relationship to the deceased, the degree of dependency, dates of death of the injured and of investigator's report, amounts of award and of lump sums and other insurance received.

In all there were 789 left dependent at the date of injury of the breadwinner (Table I). Of this number only 112, or 14 per cent, had other means of subsistence and were only partially dependent upon the support of the deceased. In this group there were only 14 wives and 7 children; the remaining 91 come under the group of "other dependents"—fathers, mothers, brothers, sisters, etc. 677 of the 789, or 84.66 per cent, were totally dependent; 17 of the number belong to the group known as "other dependents," the remainder being wives and children.

TABLE I.

Table Showing Total Number of Dependents.

Relationship to Deceased	Number of Total Dependents		Number of Partial Dependents		Total Number of Dependents	
	At date of Injury	At Date of Investiga- tion	At Date of Injury	At Date of Investiga- tion	At Date of Injury	At Date of Investiga- tion

Totals.....	677	596	112	106	789	702

*11 posthumous children, 6 deceased, 2 became independent after accident, 32 became independent wage earners, 3 married, 1 adopted.

The time elapsed between date of death and investigation in 118, or 38.66 per cent, of these cases was from 12 to 23 months. (See Table III.) In the other 192 cases the interval between these two dates varied from less than a year to five years or over. During this period the status of 96 persons of the 789 dependent at date of injury had changed (Table II) because of marriage, death, etc.

TABLE II.

Number of Dependents Whose Status was Changed at Date of Investigation.

TABLE III.

Time Elapsed Between Date of Injury and Date of Investigation.

Less Than One Year	12-23 Months Incl.	24-35 Months Incl.	36-47 Months Incl.	48-59 Months Incl.	60 Months or Over	Total
74	118	63	27	15	13	310

Table IV may be of interest. As many as 114, or 35.9 per cent, of the 317 workmen killed carried some type of insurance. Of course in 81 of these 114 cases insurance was carried through a lodge. Though joining some fraternal order, rather than the insurance, may have been the chief motive of these people, nevertheless these 81 families received money other than their compensation which helped considerably to tide over the hard times between date of death and time of readjustment.

TABLE IV.

Number Receiving Money Other Than Compensation.

Life Insurance	Lodge or Union Benefit	Others	Total
14	81	19	114

In 79 cases commutations of death benefits were allowed (Table V). Lump sum payments were made in 45 instances for the purpose of paying off mortgages and of purchasing homes. The purposes of the 22 "miscellaneous" allowances were: To supplement insufficient incomes, to repair homes, to start in business, to reinvest at higher interest and to compromise settlement agreements.

TABLE V.

Purpose of Lump Sum Allowed to Seventy-nine Families.

Buy Property	Clear Property	Remodel Property	Pay Debts	Miscellaneous	Unknown	Total Numbers Received Lump Sum
27	18	1	8	22	3	79

Tables VI to VIIIa, inclusive, are concerned with the financial conditions of these dependent families.

Table VI indicates the sources of income in these families in addition to the wage of the deceased and compensation. It will be noted that at the date of injury only 15 wives were contributing to the family income, while at the date of investigation 95 women were at work. The number having additional sources of income has increased throughout the various divisions of Table VI. Five families have had to apply for state aid. The one family receiving state aid at the time of injury was not a "poverty" family. The aid was received for the child of a relative who was being cared for by this family.

Table VIa has been added to clarify Table VI. In Table VI a family may have been receiving contributions from the wife, from roomers and other sources, hence one cannot ascertain anything of the number of sources of additional income. Table VIa supplies this additional information. It will be interesting to note that whereas at the date of injury 255 families had only one source of income, at the date of investigation only 109 cases had one source of income, and 163 had two sources. This quite agrees with the second column of Table VI, which shows an increase in the various means of support.

TABLE VI.

Sources of Income in Addition to Wage of Deceased and Compensation.

Sources of Income	At Date of Injury	At Date of Investigation

Tables VII and VIIa have been constructed in the same manner as VI and VIa, Table VII showing the numbers having financial resources, and Table VIIa showing the number of different "resources." It will be interesting to note in Table VIIa that the 127 families having no financial resources at the time of the accident have been decreased to 63 at the date of investigation. A very large number of the widows had paid something down on a home, so that they might have something when compensation expired. Many women saved—often doing without necessities—so that they might have a little something put away to avoid hardship after compensation payments ceased. Consequently, the fact that more families have financial resources in the form of savings or property does not in reality mean an increase in well being, but rather the fear of living without compensation payments.

TABLE VII.

Financial Resources.

From the reports it was only possible to determine the actual income of 140 families (Tables VIII and VIIIa). In 92, or 65.7 per cent, of these 140 cases, the family incomes had decreased as a result of the death of the breadwinner. In 48 cases the income had increased. This, however, does not mean such an increase as would indicate that the family was actually on a better financial footing than before, for in 12 of the 48 cases the increase is due to the remarriage of the widow. In 13 cases increases are due to the fact that the entire earnings of "others" had been added to the compensation. Children do not contribute their entire earnings and it is not a fair estimate of income to include them. Therefore only 11 cases show an increase in income. It is therefore safe to infer that there has been a decided decrease in income as a result of these industrial accidents, in spite of the fact that there is a decided increase in the number of sources of income.

TABLE VIII.
Cases of Known Income Showing Following Decrease.

Under \$25	\$25-\$50	\$50-\$75	\$75-\$100	\$100 or Over	Income Remaining the Same	Total Known Cases of Decrease

Cases Showing Following Increase.

Under \$25	\$25-\$50	\$50-\$75	\$75-\$100	\$100 or Over	Total Known Cases of Increase
8	10	6	10	14	48*

*12 of the above 48 cases of increase show this increase because widows have remarried.
13 cases show increase only by adding in the whole amount of wage of others, which is not usually contributed.

Tables IX to XVIII are concerned with the family data. There were 243 widows. It was difficult to ascertain their ages, as may be noted from Table IX. It is almost impossible to determine an average age. The health of the widows was noted under three headings—"Able to work", "Able but inadvisable" and "Unable to work". Under the heading "Able but inadvisable" are grouped the women having small children who needed their attention at home, or who because of age would encounter considerable difficulty. The increase in the number that were able but not advised to work may be accounted for when we remember that there were 11 posthumous children. There is an increase in the number of women who were considered unable to work at the time of investigation. Though the increase is but a small one, ranging about 1 per cent, it is nevertheless alarming, since it very likely shows that worry and a decreased standard of living have a tendency to lower the vitality and to increase the possibility of disease.

Table XI shows that the number of women working has increased from 4 doing part-time work at the date of injury to 36 full-time workers and 48 part-time workers at the date of investigation. From Table XII it may be noted that 95, or 39.4 per cent, had had some type of experience or training in some wage-earning occupation at the date of the accident, while 14 women were receiving training of some type at the date of investigation.

It will be of interest to consider Table XVI here. It will be noted that there is an alarming decrease in the number of families maintaining separate households, and that the number of families living with relatives and friends has greatly increased. When we stop to consider the importance of the influence of the properly maintained home in the prevention of juvenile delinquency, there may be just cause for alarm in these figures.

Tables XIII to XVa are concerned with the children. It will be seen that a large majority of the children are still of school age, since the California law requires children to be in full time attendance at school until the age of 16. Also, the larger number of ages range between 1 and 10 years. Even after compensation expired these children would still be dependent.

Table XV shows that 32 children had become independent wage earners by the date of investigation. An attempt was made in Table XVa to determine the age and schooling of these 32 independent wage earners. It will be noted that only two of this entire group were attending part-time school, one at a business college, the other at a part-time school. At least four (those of 15 and 16) should have been at full-time day school, while 14 others (between 16 and 18) should have been attending part-

time school. It may be that the investigator has failed to note the school attendance of those between 16 and 18. At any rate, two children between 15 and 16 are evading the school law, and I believe that it is fairly safe to judge that the same is true in the 16 to 18 group. From this it is easily seen how great the investigator's influence might be in helping to avoid such evasion.

Table XIV shows a decrease in the health of the children, which is similar to that found among the widows.

TABLE XIII.

Tables XVII and XVIII are summary tables. The judgment as to the adequacy of the compensation has been based upon the investigator's recommendations.

Of the 249 cases, 68, or 27.3 per cent, were cases of lone widows. Of these 68 the death benefit was superfluous in only one case; that is, in only one case did the widow have other financial resources sufficient to maintain herself without the allowance made by the California law. In 41 of these 68 cases the compensation was adequate. In 25 cases the amount was insufficient, lasting for too short a period, or being too small in amount. Here we find the same problem as among the dependent fathers and mothers. Very often the widow is well on in years and should have been awarded a life pension. Though the weekly compensation payments are often sufficient to supply her immediate needs, she is left at the end of the four and one-half years of compensation payments dependent entirely upon relatives or public aid.

There were 52 cases of widows with one child. In 36 cases the allowance was sufficient. In 16 it was inadequate.

Of the 35 cases of a widow and two children, 20 found the allowance insufficient.

Of the 18 cases of a widow and three children, only three found the compensation adequate.

In the eight cases of widows, with five, six and seven children, compensation was needed either in larger amounts or for longer periods of time, or for both.

There were 48 cases—of which 16 were those of dependent children and the remaining 32 were cases of “other dependents”—of fathers, mothers, brothers, sisters, etc.

Of the 16 cases of children, compensation was adequate in 10 instances.

Of the 32 families of other dependents, compensation was adequate in 17 and insufficient in 11. Here age is the principal dependency factor. This problem has been discussed above.

TABLE XVII.

Table Showing Adequacy of Compensation* as Applied to Types of Cases Based on Recommendation of Investigator.

Classification of Cases	Number of Cases Where Information is given	Compensation Adequate	Compensation Insufficient	Compensation Superfluous	Unable to Judge
Widow only.....	68	41	25	1	1
Widow, 1 child.....	52	36	16	-----	2
Widow, 2 children.....	35	13	20		
Widow, 3 children.....	20	4	16		
Widow, 4 children.....	18	3	15		
Widow, 5 children.....	2	-----	2		
Widow, 6 children.....	4	-----	4		
Widow, 7 children.....	1	-----	1		
Widow, 8 children.....	1	-----	1		
Children only.....	16	10	5	-----	1
Father, mother and others...	32	17	11	-----	4

*This table covers 249 cases.

We may summarize the results of the discussion of the adequacy of the compensation as follows:

Table XVIII. Compensation was found to be adequate in 162 of the 317 cases, or in 51.1 per cent of the cases. In 145, or 45.7 per cent of the cases, compensation was considered insufficient. In 73, or 23 per cent, of those cases the payments should have continued for a longer period of time. In 41, or 12.3 per cent, payments were needed in larger instalments, and in 31, or 9.7 per cent, payments were needed both in larger instalments and for a longer period of time. In 9 cases, or 2.8 per cent, the investigator was unable to form an opinion and in only one case .3 per cent, was the compensation considered superfluous.

Below is a copy of a table made during the last investigation, together with the percentages of adequacy or inadequacy of compensation of this investigation:

	1920	1922
Not indispensable in.....	13.8	.3
Adequate.....	48.5	51.1
Payments needed for longer time.....	28.1	23
Payments needed for longer time and in larger amounts.....	7.8	9.7
Information inadequate.....	1.7	2.8
Needed in larger amounts.....	-----	12.3

A careful examination will show that the discrepancies in percentages are small enough to show that the tendency is the same. The large difference under the heading “Needed for a longer period of time,” may be due to the fact that a new division “Needed in larger amounts” has been added in this present study. Otherwise, the differences are fairly uniform.

SUMMARY.

TABLE XVIII.

Table Showing Adequacy of Compensation Based on Recommendation of Investigator.

Adequate.....	162
Superfluous.....	1
Needed for longer period.....	73
In larger installments.....	41
Larger installments and longer time.....	31
Unable to judge.....	9
Total.....	317

From these tables one may conclude that the death of the workman results in a general lowering of the family's standard of living, health and general well being, and it would seem that the Workmen's Compensation, Insurance and Safety Act of this state is not quite meeting its responsibility. A remedy was proposed by the Commission in Senate Bill No. 259. Visit after visit to these dependents reveals to us and strengthens our belief that revision of the act is most necessary. In addition to the wages of the deceased, the size and composition of the family should be considered. Very definite constructive work could be accomplished if it were within the jurisdiction of the Commission to provide means for the economic rehabilitation of dependents.

MEDICAL DEPARTMENT.

In the year just passed the problems and activities of the Medical Department of the Industrial Accident Commission have remained unchanged from those of former years. The work varies somewhat in volume in its different branches, but the mass of work is gradually increasing.

The following is a brief tabulation of the formal and recorded activities in the San Francisco and Los Angeles offices:

	General Physical Examinations	Special Medical Examinations Requested by:			Opinions	Bills Approved
		Insurance Company	Employer	Industrial Accident Commission		
San Francisco office.....	810	60	29	116	686	380
Los Angeles office.....	489	260	86	77	334	127
Total.....	1,299	320	115	193	1,020	507

The informal duties, including consultations, conferences, adjustment of medical bills and advice to applicants consume the bulk of the time, and we hope contribute as much to the success of the cause as do the duties of which an accurate account may be made.

The main problems which hold the attention of the Medical Department have been commented on in formal reports. Some of them have been referred to more than once. It may be well, however, to again make some mention of, and brief comment upon, some of these problems.

(1) Attitude of the Medical Profession.

During the early days of the administration of the law, the medical profession, because of misunderstanding, showed a considerable hostility to the law and its administration. The fee schedule was disapproved of, and the necessary regulations were irksome,

There has been a gradual growth of understanding. Courses in industrial accident medicine and surgery are being given in the medical schools. An acceptable fee schedule has been elaborated by the Medical Society of the State of California and the Industrial Accident Commission. The best men of the medical profession are willing to contribute their skill to help the Industrial Accident Commission and the injured. Cordial cooperation now exists.

A fee schedule, to be accurate and just to both employer and surgeon, must compensate the surgeon for the difficulties he encounters in the individual case and for time consumed, and must have regard for loss of opportunity to do other work. No flat schedule, nor schedule based on a flat rate for a given diagnosis, can accomplish this.

(2) Special Medical Examiners.

The function of special medical examinations has been satisfactorily fulfilled from the start. Cooperation has been excellent. As time passes, and all concerned understand the problems better, more satisfactory and

more uniform results are being obtained. We find frequently that variations in nomenclature, and methods of recording observations, account for many misunderstandings. Medical society meetings, consultations and growth of experience by the officers of the Industrial Accident Commission and physicians are producing better understanding.

(3) Medical Fees.

It has been recognized from the beginning of this work that a fee schedule is unsatisfactory. However, there has as yet appeared no better method by which physicians and surgeons can be uniformly compensated than by the fee schedule which has been devised.

(4) Hospitals.

Industrial accident medical and surgical work should bear its own burdens of hospital expense. Many hospitals accept industrial accident cases because it is less expensive to carry such cases than to carry empty beds. Were these hospitals to be filled with compensation cases at the rates now charged, they could not survive without lowering the excellence of their service. Some hospitals accept these cases as a convenience to the members of their staffs who have compensation cases.

These practices probably will not be changed. Such condition should not be used as an argument against the charges of smaller hospitals, especially country hospitals, which can not carry on unless compensation cases pay their own way.

(5) Physical Therapy.

It has been said and repeated that the term physical therapy applied to certain mechanical treatment of the human body is not sufficient to produce desirable results. It is well known that some physicians exhibit so-called physical therapy in an unscientific manner, and in a manner which is valueless, if not harmful. Physical therapy is a branch of therapeutic treatment which requires study and practice to acquire efficiency. Physical therapy in a limited sense may be administered in a physician's office, but in important cases, and cases of serious disability, the best treatment which is offered by a well organized physical therapy institution is the only kind that should be accepted.

(6) Work Treatment.

Lack of occupation is far the greatest drawback in compensation work. The compensation law requires medical and surgical treatment. The Industrial Accident Commission has lately joined physical therapy, as indicated, with medical and surgical treatment, making it a part of required treatment.

If it were possible to provide suitable work as easily as surgery and physical therapy are provided, there would be less permanent disability and shorter convalescence.

There is a vast difference between the results in compensation work, and those in which compensation does not enter. Non-compensation cases on the average will do better, not because of more skillful treatment but because of the necessity to work.

(7) The Insurance Companies.

The insurance companies have a heavy burden of responsibility in the compensation scheme. Some companies handle their problems wisely

and humanely, others in a manner calculated to circumvent their own interests. They are shortsighted.

The injured man needs and is entitled to accurate justice and honest, albeit firm treatment. He should not be bullied, misinformed and kept in suspense. To inspire in the injured workman the certainty that he will get that which is due him, and will not get that which he does not deserve, is the ideal.

Malingering is usually a product first of an attempt on the part of the injured to make those who may help him appreciate the degree of his disability and later a desire to perpetuate the same. The result is distortion of his sense of justice and dulling of his honesty.

There is a tendency on the part of insurance companies and medical service organizations to centralize medical work in the name of economy. To a limited degree, this makes for better medical service. However, too much is harmful. Insurance companies should look to it that they do not require departure so far from the recognized order of medical affairs in pursuit of economy, as to disturb legitimate activities of physicians and hospitals.

DEPARTMENT OF SAFETY.

It takes every bit of organized and sustained activity on the part of specially created official agencies to keep accidental injuries within reasonable limits. The Safety Department of the Industrial Accident Commission of the State of California is doing its utmost with the limited facilities available, to make the number smaller. Considerable safety data accumulated in the few years of its existence have crystallized in the adoption of definite safety rules and orders covering many phases of the industrial activities engaged in throughout the state. Additional safety standards are contemplated and some of the information upon which they can be based has been secured. The California Safety News contains technical and practical informative matter of interest to those engaged in accident prevention work and carries a monthly safety message to ten thousand readers. Organizations and individuals throughout the world have expressed a desire to be placed on the mailing list of this publication and it is quite widely quoted.

The figures appearing in the two tabulations included in this report do not reflect the full range of activities engaged in by the department. Most of the time of the Superintendent of Safety, the chiefs of divisions and some of the engineers, was given to the preparation and revision of safety codes, the disposition of the ever growing volume of correspondence, numerous consultations and interviews, safety talks and cooperation with allied governmental institutions, civic bodies and safety organizations. The department is meeting with gratifying cooperation from employers, employees and the general public.

MINING DIVISION.

A careful survey of conditions existing in the petroleum industry has been made during the past year and data obtained which will be valuable when the Petroleum Safety Orders are compiled. It is hoped to have these orders completed before January 1, 1923. A Petroleum Safety Bulletin showing various ways of guarding drilling equipment, proper construction of ladders and platforms on oil derricks, etc., has been issued. This bulletin has been of great aid to the industry as shown by the number of requests for copies, not only from California but from other oil producing states.

The chief mining engineer has been required to spend a considerable portion of his time in the office, due to the numerous problems presented by operators of mines, quarries, tunnels, petroleum industry, etc. This service, which was freely given and as freely sought, tended to place the principal burden of field work on but two mining engineers.

Close cooperation has been maintained with the district engineer of the United States Bureau of Mines, in connection with ventilation and fire hazards in mines, first-aid training, etc. The Mining Division has continued to cooperate with representatives of the National Board of Fire Underwriters, the Commission of Immigration and Housing, the State Board of Health, the State Mining Bureau and other State commissions.

BOILER DIVISION.

During the year, in spite of the fact that one inspector less has been employed than during the preceding year, the inspection of boilers has been well maintained, although this has been done at the expense of the inspection of air pressure tanks and other pressure vessels.

In addition, an appreciable part of the time of the inspectors has been taken up in the investigation of fatalities, and in general inspections wherever it was found that the making of these would save travel on the part of members of the other divisions.

It is to be regretted that the thorough and complete inspection of all air tanks in the State is a physical impossibility with the present staff of boiler inspectors employed. The necessity for an improvement in this direction is emphasized by the fact that in the early part of 1922 no fewer than seven welded air tanks have exploded, fortunately unaccompanied by any personal injury and in most cases by very limited property damage. The fact remains, however, that these explosions carry with them the potential hazard of serious personal injury, if not actual fatality.

The certifying of inspectors after examination and the reporting of boilers, rendered non-compulsory by the enactment of Assembly Bill 1300, has been continued on the basis of voluntary cooperation by the Insurance Companies between whom and the Boiler Division amicable relations exist.

It is regrettable that the Boiler Division has not met with similar cooperation from the Board of Mechanical Engineers in Los Angeles since the enactment of Assembly Bill 1300. This board has ceased to report its inspections to the Commission and evidently does not desire to cooperate. In pursuing this course it does not serve the true interests of the boiler owners and users who pay for inspection service.

The withdrawal of the inspection fees is proving a handicap, since it virtually prohibits any adequate addition to the inspection staff and so restricts the Boiler Division from making the proper expansion necessary to cope with the ever-increasing use of pressure vessels. The present rate of increase in field inspections would indicate that at least one inspector should be added to the staff every two years for several years to come.

During the year the revision of the Boiler Safety Orders was continued, but many unavoidable delays were encountered in bringing this to completion through the difficulty that was met in focusing the opinions of all parties to a common point where all might agree. However, the revision was completed and the tentative revised orders sent to the printer near the close of the fiscal year.

The year marks a decrease in the total number of boiler explosions, of which but three major explosions are to be reported. So far as can be ascertained, there was but one death from this cause.

The office work has been expeditiously handled and in addition to the voluminous correspondence, drawings and specifications submitted by manufacturers have been checked, as also have many hundreds of manufacturers' data sheets covering the boilers built to California standard requirements, although not necessarily shipped into the state.

It is gratifying to report that 304 California standard boilers have been built during the year in California. The progress that this shows is noticeable by comparison with the figures that were quoted at one of

the revised Boiler Safety Orders hearings, in which it was stated that 292 California standard boilers had been built in the state from January 1, 1918, to January, 1921.

Eight candidates took the examination for certificate of competency. Of these but one passed at the first attempt, five passed on the second attempt and two failed.

There has been noticeable increase in the number of pressure vessels, particularly air receivers, constructed in California, a large percentage being made by the welding process. It is extremely difficult to regulate this work without definite rules as a guide. There is apparently a strong feeling among the welding fraternity that welders should pass an examination and be licensed. This division would welcome any such restriction, believing that it would tend in a measure to reduce the number of failures of welded pressure vessels now occurring by reason of poor workmanship.

LUMBER AND SHIPBUILDING DIVISION.

Consideration should be given to the fact that approximately thirteen accidents out of every one hundred reported to the Industrial Accident Commission occur in the lumber and shipbuilding industries of the state. Only one engineer handles the safety features of these two divisions and he has not been able to visit all the plants of the lumber industry during the past year.

An inspection was made of all of the shipbuilding and boat building yards during the winter months, and the inspection of plants engaged in the lumber industry was begun just as soon as weather conditions permitted.

This division is devoting a great deal of its time to educational work among the employees; short talks are given on safety whenever possible, and the employers are assisted in the organizing of safety committees in their plants. Cooperation is being extended to the division by the majority of the mill operators and our services are frequently requested.

It is found that employers, in these two industries, are more than willing to comply with the safety requirements, but they must have help from this division. Assistance can be given by repeated and careful inspections and the frequent reporting of safety requirements to the employer's attention.

It is believed that a strong, live campaign of educational work among the employees, not only of these two industries but among all others, will bring about a closer cooperation of the employers and employees in the safety field and will reduce the number of accidents.

Articles were prepared for the California Safety News, and the increasing volume of correspondence of these two industries has been handled expeditiously, considering the fact that 75 per cent of the time of the engineer is spent in the field.

CONSTRUCTION DIVISION.

The year ending June, 30, 1922, has been one of the busiest years in the history of the Construction Division.

On January 17 and 20, 1922, public hearings were held in San Francisco and Los Angeles on the construction hoisting signals and the readoption of the Trench Construction Safety Orders.

During the year considerable progress has been made in the revision of the General Construction Safety Orders. Several new tentative orders have been added by the revision committee, relating to the construction of towers, the design, construction and operation of hoists, the design and construction of various types of scaffolds, the design and construction of ladders used by various trades, the design and construction of side-walk sheds, and the use of oxyacetylene gas welding and cutting processes on construction work.

Owing to the great activity in the building industry and on account of the small force of men in the construction division, the revision of the General Construction Safety Orders has been postponed until the fall and winter months. It is believed that these orders, after they are finished by the committees and adopted by the Commission, will be the most complete in the United States and, if observed, should reduce accidents on construction work to a minimum.

It is regretted that the Construction Division force is too small to cover the building activities in the entire state. This division is badly in need of several more inspectors.

It will be of interest to learn that the thirteen largest cities in California issued 68,344 building permits in 1921, valued at \$160,000,000. These cities, in the first six months in 1922, issued 41,747 building permits valued at \$127,500,000. These cities have seventy building inspectors to cover the building industry while the Industrial Accident Commission has only two men and the partial services of another to cover the entire state.

During the year considerable time was spent in the office by the Division Chief in checking plans of buildings in the course of construction which were reported unsafe, attending committee meetings, revising the General Construction Safety Orders, holding conferences with contractors, engineers, architects, employees and others, regarding the interpretation of the safety orders and methods of meeting the requirements of the Industrial Accident Commission. Considerable time was spent inspecting public buildings and grandstands which were reported unsafe.

In addition to the inspection of construction work, a considerable amount of time has been devoted to general safety work, such as the inspection of planing mills, sawmills, machine shops, laundries and other manufacturing plants, in order to economize on traveling expenses.

Eighteen lectures were given in various parts of the state on subjects relating to safe practices on construction work, to audiences composed of employees, builders and the general public, and several articles were prepared for publication in the California Safety News.

Although this division is short-handed and the building activities have exceeded all previous years in this state, it is gratifying to note that statistical tables indicate that a reduction has been effected in the number of accidents on construction work during 1921.

ELEVATOR DIVISION.

The Elevator Inspection Law (chapter 74, Laws of 1917) required that all elevators be inspected every six months. After this law had been in operation several years it was found that if the elevators were once made to comply with the requirements of the Elevator Safety Orders, it would

not be necessary to inspect them more frequently than once in twelve months, as the owners or lessees could be depended upon to take care of the operating conditions and proper maintenance. In 1921 the Commission presented an amendment to the Legislature requiring annual instead of semiannual inspection. This amendment was adopted and became effective on July 29, 1921.

Elevator inspections are made by six men employed by the Industrial Accident Commission, three men employed by the Board of Mechanical Engineers of Los Angeles, and forty-six men employed by insurance companies. The six inspectors employed by the Commission are under State Civil Service, while the inspectors employed by the Board of Mechanical Engineers and the insurance companies are given certificates of competency only after having passed an examination given by the Commission. Each inspector is required to turn in his report to the Commission, showing the actual condition of each elevator he has inspected.

After an exhaustive study of the Elevator Safety Orders in force throughout the United States, a tentative draft of a revision of the Elevator Safety Orders was presented in December, 1921, to a committee in San Francisco, and in January, 1922, to a committee in Los Angeles. The Commission in organizing this committee asked representative bodies of employers, employees and civic organizations each to appoint a representative and an alternate, except in the case of the Elevator Constructors' Union, which was asked to appoint two members and two alternates, so that the committee would be properly balanced between representation of employers, employees and the public. The men appointed by these organizations together with representatives of the Commission composed the committees. Each committee held a number of meetings and the revised orders as suggested by these committees are now being prepared for the printer. When the tentative draft has been printed and distributed, public hearings will be held in San Francisco and Los Angeles to consider the recommendations made by the revisions committees. The revised orders will then be adopted by the Commission.

The itineraries of the elevator inspectors have been so arranged that outlying districts will be visited once a year, and the larger cities three times a year. This arrangement will increase the number of inspections of unsafe elevators and will eliminate the necessity for many special trips, thereby decreasing the expenses of the Division. Through the cooperation of the persons responsible for the condition of the elevators in daily use throughout the state, the equipment generally is in a safe condition. Cooperation between the passengers on elevators, the persons responsible for the condition of the elevators and the Industrial Accident Commission should show a decrease in the number of accidents, in spite of the increased number of elevators. The elevator inspectors have held informal meetings to discuss the application of the Elevator Safety Orders and the safe operation of elevators; and in January, 1922, the First Annual Convention of the Elevator Inspectors was held in San Francisco. The results of these meetings should be beneficial to all concerned.

ELECTRICAL DIVISION.

The time of the Electrical Division during the past year has been mainly given to revising of the Electrical Safety Orders. This work has been under way since September, 1919, when the general revisions committee first undertook the task of combining the Electrical Code with the Electrical Safety Code. At the first meeting of the general revisions committee the work of drafting the revised orders was divided into sections, than allotted to separate sub-committees. After the sub-committees had completed their work, the general committee reconvened for the purpose of considering their recommendations. Recognizing the importance of these orders and appreciating the fact that it is the first time that a combined set of orders has been compiled which covers the installation of electrical equipment with a view of preventing either accidents or fires from electrical causes, it was considered advisable to have them printed in a preliminary form. This preliminary form will be distributed generally to all applicants who may be interested. The fact that these orders were to be distributed for criticism and suggestions before they were to be adopted in their final form has been widely advertised through the California Safety News, and requests for copies have been received from many sources. When the general committees reconvene they will have before them criticisms of the preliminary form of the orders, which should be of material assistance in drafting the Tentative Electrical Safety Orders.

The Industrial Accident Commission has had excellent cooperation from municipal electrical inspection departments, public service corporations, electrical contractors and dealers, and others engaged in the electrical industry, in enforcing and applying the Electrical Utilization Safety Orders, in force at present. A much higher standard of electrical work has been maintained since the adoption of these orders in 1917, and there has been a reduction in the number of fires from electrical causes and accidents from contact with exposed current-carrying parts.

During the year attention has been given to the subject of resuscitation from electrical shocks, drowning, or asphyxiation. Several articles on this subject have appeared in the California Safety News, resulting in considerable favorable comment, and requests for copies of the chart showing the Schaefer or prone pressure method of artificial respiration. It is planned to give this subject even more attention during the ensuing year.

Material and apparatus have been procured to use in conjunction with a series of lectures on electrical subjects which will be given by this division. The preliminary form of the Electrical Safety Orders will be explained, and the dangers of overloading and improperly protecting electrical circuits will be demonstrated.

INVESTIGATION AND PREVENTION OF OCCUPATIONAL DISEASES.

In the past the Industrial Accident Commission has not had facilities for making detailed investigations of industrial diseases; or has data been available upon which to base requirements to prevent such injuries. Hazards of this sort exist not only in the manufacture and use of corrosive substances, such as strong acids and alkalies, chlorine gas, etc., and processes in which explosions may occur or where poisonous or noxious gases

are formed, but also in the wide range of operations involving the handling of toxic substances.

Toward the end of the fiscal year the Commission made special arrangements for investigative work in the general field of chemical engineering. This field includes not only the industries primarily engaged in the manufacture of chemicals, but other industries in which there is the possibility of occupational diseases due to the chemical nature of the materials being handled.

The first systematic investigation is being started in the various industries where lead is used and where employees suffer from lead poisoning. Numerous cases of lead poisoning have been reported and it has been learned that the injuries may occur in a variety of industries, including the smelting of lead ores, the manufacture of lead pigments, the mixing of paints and manufacture of storage batteries, and the application of lead glazes to porcelain and sanitary ware.

If the investigation shows the advisability of issuing safety orders covering the work in these industries, such orders will be formulated in the usual way. Owing to the diversity of the various operations it probably will be unpractical to establish one set of safety regulations covering all of them.

The Industrial Accident Commission has retained Dr. L. H. Duschak, of the firm of Duschak & Riddell, consulting chemical engineers of San Francisco, to supervise this work, since there are no chemical engineers regularly employed on the Industrial Accident Commission's staff.

GENERAL INSPECTIONS.

During the past fiscal year, the safety work ordinarily assigned to the Mechanical Division was distributed among the qualified members of the various divisions, due to a shortage of safety engineers. While this plan was inadequate to fully cover the field, it served as a temporary expedient. However, trained engineers should be employed to solve the various problems encountered in general safety work. It should be noted that due to the various industries included under general inspections, the field is very extensive and considerable time and effort will be required to bring this work up to a reasonable safety standard.

LOS ANGELES OFFICE.

The southern office of the Department of Safety, located at 908 Pacific Finance Building, corner of Sixth and Olive streets, Los Angeles, California, is charged with the enforcement of the California safety laws and the safety orders issued by the Industrial Accident Commission, in all places of employment in Southern California.

When the diversity, magnitude and wide distribution of the work involved is considered, it becomes immediately apparent that the Los Angeles staff is inadequate to cope fully with it, even with help from attaches of the main office at San Francisco, who are periodically sent into this field, to the disadvantage of activities in the northern part of the state. It is hoped that this handicap will be removed by providing ways and means whereby additional help may be secured.

During the past fiscal year the technical force has devoted more than the regular working hours to inspecting and correcting hazardous conditions in places of employment; has investigated industrial accidents and

prescribed remedies designed to guard against recurrences; has participated in the revision of the Electrical Utilization Safety Orders, and the drafting of Petroleum Industry Safety Orders and Hydrocyanic Acid Safety Orders; in cooperation with the State Board of Education has inspected all manual training shops in schools and colleges, and given advice on safe equipment and safe practices therein; has contributed its quota of articles to the California Safety News; has made numerous investigations and tests bearing upon safe industrial equipment and practices; has taken active part in and cooperated with technical, political, civic, safety, industrial and other public and private organizations and institutions, to the end of accident prevention.

In thus carrying on the official functions of the Safety Department in Southern California, this office has contributed liberally toward the conservation of the Nation's man-power, and in so doing has received most gratifying cooperation at the hands of employers, employees, and the general public.

REFERENCE LIBRARY.

During the past year the need for a centralized source of safety information has become more and more apparent. The result has been the establishment of the Safety Department library. This was primarily intended for the use of the Safety Department, but it has proved of value to other departments of the Commission, as well as to outside industries, and the scope of its usefulness has been greatly enlarged.

Gradually the library has been accumulating such standard books as are published by the U. S. government, various state codes covering factory inspection and compensation laws, as well as a variety of publications on first aid, occupational diseases, fire prevention, eye protection, etc. Several standard safety magazines are received regularly, clipped, and articles of interest concerning safety and health filed. There are on file hundreds of photographs of safe and unsafe conditions which have been discovered by the Safety Department's staff in the course of their inspection work. In addition, there are several hundred stereoptican slides of interest to the safety worker, the employer and the employee, covering not only hazardous and safe conditions, but also showing the result of injury to employees.

The library also has charge of the bookings for the motion picture "Preventable Accidents in the Lumber Industry" and the one-reel film "Man without Hands." Safety and welfare films obtained from various sources are available for distribution.

Inquiries for information are constantly being sent to the library. If the information desired is not available from the data on hand, request is made of other safety libraries, chief among which is the National Safety Council, whose publications are considered of the utmost value in safety and accident prevention work.

It has been possible, due to the information and data on file in the library, to furnish material for safety talks along various lines.

SAFETY EXHIBIT.

It is planned to discontinue the Safety Museum in San Francisco and make the exhibits mobile so they may be shown at state fairs and wherever opportunity offers, thus reaching citizens in other parts of the state. Some of the exhibits will be retained in the offices of the different divisions of the Safety Department.

The electrical exhibit consists of a projectoscope for displaying opaque objects on the screen, which is used to show safe and unsafe electrical conditions, using either the objects to be portrayed or photographs. A special transformer with high current output to show the heating effect of electrical current and for demonstrating the danger of fire from overloading electrical conductors is also a part of the exhibit. A portable motion picture machine with educational electrical films has also been ordered. A lecture is given in connection with the exhibit outlining the requirements of the Electrical Safety Orders and causes of injuries from electrical equipment.

Another interesting feature of the portable safety exhibit consists of models showing safety on building construction and guards for wood-working machinery. A number of instructive slides showing various safety devices, industrial diseases, safety slogans, etc. is also a part of the exhibit.

CONCLUSIONS.

The expenditures of the Safety Department for the past fiscal year were \$6,258.41 less than those of the preceding year. The reduction was almost entirely due to the most rigid economy practiced in the purchasing of supplies and equipment. It is gratifying to report that the saving was effected in the face of an increase in office rental apportioned to this department, amounting to \$1,716.87. It is of interest to note in this connection that the tabulations incorporated in this report show the increase of activities to be 17 per cent in excess of those of the preceding fiscal year; this was accomplished not only at decreased cost, but also with a lesser number of available working hours. The fourteen automobiles assigned to this department operated at just a shade under six cents per mile and have covered 138,020 miles of California territory. This is in addition to 46,365 miles traveled in other conveyances and on foot. The total mileage traveled by the engineers and inspectors during the year was some 25,000 miles in excess of that for the previous year. The department is proud of its record for the fiscal year and bespeaks the encouragement and assistance of all concerned in the continuance of its work, which is economically sound, humanitarian and effective.

SUMMARY OF ACTIVITIES.

Comparison of Two Fiscal Years.

	Fiscal Year ending June 30, 1922	Fiscal Year ending June 30, 1921	Percentage of Increase
<i>Inspections:</i>			
Boiler—

STATE COMPENSATION INSURANCE FUND.

In order that this report may serve its purpose as a part of the report of the Commission for fiscal year ended June 30, 1922, the financial statements following give figures to that date, but for purpose of comparison with statements of other insurance carriers the statements as of December 31, 1921, would be more indicative. The fund, as in the case of each licensed carrier, is required to file a complete annual report with the Insurance Commissioner on a calendar year basis and that report is more comprehensive in its exhibits than is possible in the quarterly reports filed by the fund in accordance with the special reporting provision of the compensation statute. These calendar year reports are on file in the office of the Insurance Commissioner but limited space prohibits their reproduction herein as they consist of extensive financial data and underwriting and investment gain and loss exhibits in such detail as to cover many pages.

In previous report the total net premium writings of the fund for the year 1921 were estimated at \$5,000,000. This expectation was realized and the actual figure proved to be \$5,004,880.67. The total premiums of all carriers (thirty-six in number) in the year 1921 were \$13,554,107.02, the fund's percentage of the total being 36.9 per cent. In spite of the entry of new carriers into the competitive field in California the fund again made some advance in its percentage of the total business of the state.

The premium figures for the semiannual period ended June 30, 1922, show a reduction from the corresponding period of 1921, but a careful analysis of the records reveals the fact that this decrease is due entirely to the financial depression of 1921 and a consequent falling off in the pay roll of industries affected, coupled with some reduction in average wage. These conditions are felt by insurance carriers in the year succeeding when the final premium adjustments are made from audit of employers' pay roll accounts. The result is the payment of heavy return premiums by the carrier where normally the collection of additional premiums obtains. As definite proof that the above described condition is responsible for the decrease in written premiums and that the fund has actually increased its clientele in the first half of the year 1922, the following table has been constructed from the records, leaving out of consideration return and additional premiums from pay roll adjustments:

Initial and Deposit Premiums.

	New Business	Renewal	Total
First half 1921.....	\$179,943	\$734,696	\$914,639
First half 1922.....	\$238,934	\$783,838	\$1,022,772
Per cent of increase 1922 over 1921.....	33%	7%	12%

As this report goes to press there are strong indications that the second half of 1922 will show an increase over the corresponding period of 1921. While this may not be sufficient to offset the decrease during the first semiannual period, it reflects a material increase in industrial activity and the probability of a heavy increase in premium writings in 1923.

A further indication of this is seen in the periodical pay roll reports being received from employers and the larger number of men employed as indicated by a heavy increase in the number of injury reports received daily.

Two new branch offices were opened in 1921 to better serve patrons of the fund, the first having been established at Stockton on October 1 and the second at San Jose on November 23. These constitute the sixth and seventh branches established, the others being at Los Angeles, Sacramento, Oakland, San Diego and Fresno.

The plan adopted for distribution of dividend savings, which was explained at some length in previous report, has operated admirably, the actual average dividend expectancy contemplated in the table having very closely approximated the actual dividends disbursed as policies expired and pay rolls and losses were checked. Under policies issued in 1921 the table provides an average dividend of 30 per cent, the exact percentage dependent upon the size of risk and the indicated loss ratio at valuation within sixty days following expiration. As previously explained, this results in many risks receiving a dividend far in excess of the average in percentage, while others receive returns of less in percentage to premium earned than the average to all risks. The table is so constructed that a risk of average size will receive a dividend which fluctuates but slightly over or under the average on account of individual experience, while the variation in dividend increases with increasing size of risk to a point where a very large risk may receive a dividend far above the average in the event of favorable loss ratio and may be limited to the minimum dividend of 10 per cent in the case of extremely unfavorable loss experience.

As indicated by the financial statements which follow, the fund has a net surplus over and above all possible liabilities which would enable it to meet any possible call upon its resources due to catastrophe. The legal loss reserve has so consistently proved to exceed the actual losses each year that the reserve item contains a hidden profit which no doubt is alone sufficient to meet a sizable catastrophe without disturbing the surplus, that surplus then being in the nature of a most substantial second "line of defense" against catastrophes. Reinsurance has been considered from time to time as a further protection of the surplus but up to date of this report quotations have not been deemed sufficiently attractive to justify the cost as a charge upon fund policyholders. The surplus has been accumulated largely from investment income, an item included in the so-called "banking profit" of corporate competitors and customarily enjoyed by stockholders along with any "underwriting profit" earned. "Underwriting profit" of the fund includes a material saving in expense and this profit has enabled the fund to reduce the cost to its policyholders by approximately 30 per cent of the premiums earned. This saving includes final dividend to 1919 policyholders to be released at the end of the current year, dividends for subsequent years being paid in a single disbursement shortly following the expiration of each policy.

Financial statements and brief statistical tables in customary form are brought down to date on pages following.

STATE COMPENSATION INSURANCE FUND.

Statement of Business Done During the First Half of the Year 1922.

<i>Earnings.</i>		
Earned premiums—		
Premiums written	\$2,261,694 66

STATISTICAL REPORT FOR THE CALENDAR YEAR 1921.

FOREWORD.

The tables which follow present the statistics of industrial injuries sustained by employees during the calendar year 1921. The compilations follow the same form as in the two preceding annual reports and hence make possible a comparative analysis between the three years 1919, 1920 and 1921.

There were in all 125,529 cases reported, of which 62,273 represented tabulatable injuries, that is, injuries which caused disability lasting longer than the day of injury. Of the remaining 63,256 cases there were 2571 in which the duration of disability was unknown and 60,685 which caused no disability. Of the 62,273 tabulatable injuries, 30,709 were compensable, that is, they involved the payment of disability indemnity as provided by the law. As in the two preceding annual reports, some of the tables deal with compensable cases only and others with tabulatable cases.

The outstanding cost of open cases has been determined by a valuation of the individual cases. No estimates are involved, as the same table of average values used in the two preceding years' reports has been applied to indeterminate cases. The latter include all cases in which the extent of disability was indeterminate on June 30, 1922.

The following table gives at a glance an interesting comparison of compensable injuries and their average costs for the years 1919, 1920 and 1921:

Injuries causing—	Number of compensable injuries			Average incurred compensation per case		
	1919	1920	1921	1919	1920	1921
All injuries.....	25,754	32,459	30,709	\$218 29	\$195 53	\$192 93
Deaths.....	440	490	453	2,462 08	2,359 26	2,538 16
Permanent total disabilities...	5	6	5	9,066 80	10,495 33	9,863 00
Permanent partial disabilities...	1,709	1,923	1,638	990 62	983 26	931 98
Indeterminate disabilities.....	695	594	613	1,911 30	2,168 59	2,120 16
Temporary disabilities.....	22,905	29,446	28,000	64 24	66 18	67 83

As is to be expected there is a fluctuation from year to year, not only in the total number of compensable injuries but also in the number of specific types of injury such as deaths, permanent totals, etc. But even allowing for the natural fluctuation expected because of variations in the number of workers exposed to industrial injury and the shifting importance of hazardous and non-hazardous industries, there is cause for gratification over the showing for 1921. Not only has the average cost of all compensable injuries again fallen, being \$2.60 below 1920 and \$25.36 below 1919, but the drop has been occasioned by a shifting of injured workers from the permanent disability to the temporary disability class. Although nearly 5000 more compensable injuries were sustained in 1921 than in 1919 (an increase of 20 per cent) there were 71 less permanent injuries (a decrease of 4.5 per cent). There were

1750 less compensable injuries in 1921 than in 1920 (a decrease of 5.5 per cent), whereas the permanent injuries decreased by 286 (a decrease of 15 per cent).

The main importance of this decrease is the fact that through increased care and the application of safety devices, industry in the past year has caused fewer workers to face life in a permanently maimed condition. But from a financial viewpoint the saving also has been worth while. In 1919 the total incurred compensation on account of permanent injuries was \$1,738,307, in 1920 \$1,953,789, and in 1921 \$1,575,909, or a saving of \$162,398 over 1919 and of \$377,880 over 1920.

It is interesting to compare the actual distribution of injuries for the years 1919, 1920 and 1921 with the theoretical distribution developed from a countrywide experience and published as the American Accident Table. For convenience in making this comparison the numbers of each type of injury have been converted to the basis of 100,000 compensable injuries. The table is as follows:

Injuries causing—	California distribution for years			American Accident Table distribution
	1919	1920	1921	
All injuries.....	100,000	100,000	100,000	100,000
Death.....	1,708	1,510	1,475	1,407
Permanent total disability.....	19	18	16	114
Permanent partial disability.....	6,636	5,924	5,334	6,989
Indeterminate disability.....	2,699	1,830	1,996	-----
Temporary disability.....	88,938	90,718	91,179	91,490

Upon the assumption that all indeterminate disabilities will ultimately be found to be of a permanent character, a better comparison can be made by combining all permanents and indeterminates in one class. This is done in the following table:

Injuries causing—	California distribution for years			American Accident Table distribution
	1919	1920	1921	
All injuries.....	100,000	100,000	100,000	100,000
Death.....	1,708	1,510	1,475	1,407
Permanent and indeterminate disability.....	9,354	7,772	7,346	7,103
Temporary disability.....	88,938	90,718	91,179	91,490

It will be noted throughout that the California record shows a higher frequency of serious injuries (deaths and permanents) than the American Accident Table. This is probably due to the fact that the industry of the state as a whole is of a heavier type than found in the manufacturing states of the East, and that the experience of the latter will be found to follow the theoretical distribution more closely. But the most noteworthy thing in the table is the steady decline during the three year period of the proportion of the serious injuries. The year 1920 showed a marked reduction over 1919 and now 1921 has

shown an equally striking decline from 1920. How much of this shift in the distribution of injuries from serious to non-serious has been due to an increase in the proportion of relatively non-hazardous manufacturing industries in our state and how much to safety work is purely problematical. But the fact that the ratio of manufacturing accidents to total accidents has decreased each year points to accident prevention as the primary cause.

TABLE I.

Compensation Incurred on Account of Compensable Injuries by Extent of Disability.

Injuries causing—	Number of injuries ¹	Compensation paid and outstanding ²				
		Paid	Outstanding	Incurred	Per cent of total	Average per case
All injuries.....	30,709	\$3,501,051	\$2,423,531	\$5,924,582	100.0	\$192 93
Deaths.....	453	400,417	749,372	1,149,789	19.4	2,538 16
Permanent total disabilities....	5	4,164	45,151	49,315	.8	9,863 00
Permanent partial disabilities....	1,638	858,671	667,923	1,526,594	25.8	931 98
Indeterminate disabilities ³	613	338,571	961,085	1,299,656	21.9	2,120 16
Temporary disabilities.....	28,000	1,899,228	-----	1,899,228	32.1	67 83

¹Excludes injuries in exempt employments as well as other non-compensable injuries.

²Medical aid not included, as total of \$2,496,176 reported represents merely the aggregate medical paid in individual cases to the date of last report and does not include either medical paid under contract or medical outstanding.

³Outstanding compensation based upon tabular valuation.

5 to 6 weeks.....	2,111	24 to 25 weeks.....	39
		Over 25 weeks.....	399

*Does not include 2571 cases for which duration of disability was not reported; 60,685 additional cases were reported in which no time was lost.

TABLE VII.
Tabulatable Injuries by Main Industrial Divisions and Extent of Disability.

Industrial divisions	Number of injuries						Severity of injuries		
	Total	Deaths	Permanent disabilities	Inde- terminate disabilities	Temporary disabilities			*Total days lost	Average days lost per case
					15 days and over	8 to 14 days	1 to 7 days		
All industry-----	62,273	550	1,643	613	22,458	9,828	27,181	6,829,294	110
Agriculture-----	4,411	46	96	54	1,862	783	1,570	545,250	124
Mining and milling-----	1,316	16	41	21	454	194	590	186,318	142
Oil producing-----	3,119	25	99	17	880	542	1,556	294,180	94
Quarrying-----	544	12	21	8	184	68	251	117,159	215
All manufacturing-----	17,378	78	639	138	5,879	2,848	7,796	1,449,057	83
Food and beverages-----	4,560	13	90	41	1,516	853	2,047	283,923	62
Textiles-----	104	---	5	1	36	18	44	7,711	74
Clothing-----	251	---	4	2	81	42	122	9,032	36
Laundries-----	409	---	13	4	166	79	147	34,132	83
Leather-----	163	---	4	1	55	32	71	5,423	33
Rubber and composition goods-----	158	2	10	2	56	35	53	27,345	173
Pulp and paper-----	114	---	4	1	38	14	57	5,080	45
Paper goods-----	142	---	8	2	51	23	58	11,350	45
Printing-----	480	---	19	3	182	74	202	25,679	80
Lumber and wood-----	4,032	41	271	38	1,499	655	1,528	571,946	142
Iron and steel manufacturing-----	350	3	10	1	149	52	135	40,571	116
Metal working-----	1,991	2	58	14	633	290	994	109,887	55
Machinery-----	2,208	6	64	8	662	318	1,150	127,220	58
Vehicles-----	333	1	16	5	98	47	166	29,890	90
Stone products-----	459	1	10	5	124	56	263	27,557	60
Clay products-----	343	1	14	2	140	50	136	24,684	72
Glass products-----	139	---	2	2	57	19	59	8,347	60
Chemical manufacturing-----	1,128	8	35	6	336	189	554	97,398	86
All other manufacturing-----	14	---	2	---	---	2	10	1,882	134
All construction-----	10,525	90	308	157	4,146	1,483	4,341	1,332,112	126
Engineering-----	2,784	42	84	43	1,101	419	1,095	478,849	172
Building-----	5,804	39	138	86	2,369	803	2,369	641,485	111
Boat building-----	1,937	9	86	28	676	261	877	211,778	109
Vessel operation-----	236	26	3	2	112	28	65	167,287	708
Stevedoring and freight handling-----	1,006	9	30	7	489	124	347	119,157	119
Railroad operation-----	5,325	63	86	26	1,663	917	2,570	609,242	114
Cartage and storage-----	3,751	36	56	36	1,469	572	1,582	401,149	107
Public utilities-----	2,908	71	37	34	954	459	1,353	575,622	198
Commercial enterprises-----	6,972	27	122	59	2,435	1,076	3,253	465,791	67
Clerical and Professional-----	1,338	19	23	15	495	166	620	179,178	134
Care and custody-----	2,404	19	58	21	979	420	907	235,472	98
Motion picture production-----	501	5	12	6	236	51	191	61,357	122
Miscellaneous-----	539	8	12	12	221	97	189	90,963	169

*See footnote to Table III, page 62, for method of determination.

TABLE VIII.

Fatal Cases by Degree of Dependency.

Dependency	Number of deaths	Per cent of all	Number of dependents per death
All	550	100.0	1.49
Unknown	30	5.5	-----
No dependents	159	28.9	-----
Partial dependents	59	10.7	1.99
Full dependents	302	54.9	2.32
Widow only	97	17.6	1.0
Widow and 1 child	49	8.9	2.0
Widow and 2 children	48	8.7	3.0
Widow and 3 children	24	4.3	4.0
Widow and 4 children	10	1.8	5.0
Widow and 5 children	9	1.6	6.0
Widow and 6 children	3	.5	7.0
Widow and 7 children	1	.2	8.0
Widow and 8 children	1	.2	9.0
Widow and 9 children	1	.2	10.0
1 child	13	2.4	1.0
2 children	7	1.3	2.0
4 children	1	.2	4.0
5 children	2	.4	5.0
7 children	1	.2	7.0
Widow and parents	4	.7	2.2
Widow and others	2	.4	2.0
Widow, 1 child and others	1	.2	3.0
Widow, 2 children and others	1	.2	4.0
1 child and parents	1	.2	2.0
4 children and parents	1	.2	5.0
1 child and others	1	.2	3.0
Parents only	59	10.7	1.4
Parents and brother or sister	13	2.4	3.8
Brother or sister	8	1.5	1.9
Other dependents	3	.5	2.3

TABLE IX.

Fatal Cases by Character of Dependency and Main Industrial Divisions.

Industrial divisions	Number of deaths				
	All	Dependency unknown	No dependents	Partial dependents	Full dependents
All industries	550	30	159	59	302
Agriculture	46	3	25	4	14
Mining and quarrying	28	-----	7	7	14
Oil producing	25	1	4	2	18
Lumber and wood manufacturing	41	1	20	8	12
Metal and machinery manufacturing	11	-----	2	1	8
Other manufacturing	26	-----	8	3	15
Engineering construction	42	-----	16	4	22
Building construction	39	1	8	2	28
Boat building	9	-----	1	2	6
Vessel operation and stevedoring	35	17	6	1	11
Railroad operation	63	5	12	4	42
Cartage and storage	36	-----	12	3	21
Public utilities	71	-----	18	9	44
Commercial enterprises, clerical and professional	46	1	10	5	30
Care and custody	19	1	6	3	9
Miscellaneous	13	-----	4	1	8

TABLE X.
Fatal Cases—Ages of Dependents at Date of Death.

Children		Widows			
Age at death of parent	Number	Age at death of husband	Number		
			All	Widows with children	Widows with no children
*All children.....	357	*All widows.....	193	122	71
Average age—years.....	8.8	Average age—years.....	38.7	35.5	44.2
Posthumous.....	6	15 to 20 years.....	4	3	1
Less than one-half year.....	13	20 to 25 years.....	13	11	2
1 year.....	22	25 to 30 years.....	31	21	10
2 years.....	25	30 to 35 years.....	30	23	7
3 years.....	21	35 to 40 years.....	29	22	7
4 years.....	23	40 to 45 years.....	28	20	8
5 years.....	22	45 to 50 years.....	23	13	10
6 years.....	17	50 to 55 years.....	16	9	7
7 years.....	22	55 to 60 years.....	8	-----	8
8 years.....	19	60 to 65.....	6	-----	6
9 years.....	14	65 and over.....	5	-----	5
10 years.....	15				
11 years.....	19				
12 years.....	20				
13 years.....	18				
14 years.....	19				
15 years.....	15				
16 years.....	6				
17 years.....	15				
18 years.....	10				
Over 18.....	16				

*Does not include 44 children for whom ages were not reported.
 *Does not include 58 widows for whom ages were not reported.

TABLE XI.
Fatal Cases—Suspension of Mortality.

Period between date of injury and date of death	Number of cases	Per cent of total
*All cases.....	544	100.0
None.....	373	68.6
1 day.....	47	8.6
2 days.....	15	2.8
3 days.....	11	2.0
4 days.....	5	.9
5 days.....	7	1.3
6 days.....	7	1.3
7 days.....	4	.7
1 to 2 weeks.....	28	5.1
2 to 3 weeks.....	9	1.7
3 to 4 weeks.....	6	1.1
5 to 10 weeks.....	24	4.4
10 to 15 weeks.....	2	.4
15 to 20 weeks.....	1	.2
20 to 25 weeks.....	2	.4
Over 25 weeks.....	3	.6

*Does not include 6 cases for which suspension was not reported.

TABLE XII.
Part 1A. Causes of Tabulatable Injuries by Extent of Disability—Summary of Main Cause Groups for all Industries.

Causes	Number of injuries						Severity of injuries	
	Total	Deaths	Permanent disabilities	Inde-terminate disabilities	Temporary Disabilities			Per cent of total days lost
					15 days and over	8 to 14 days	1 to 7 days	
All causes-----	62,273	550	1,643	613	22,458	9,828	27,181	100.0
Handling of objects-----	15,785	21	241	66	5,575	2,793	7,089	9.5
Stepping on or striking against objects-----	4,358	3	20	14	963	778	2,580	1.8
Falling objects—not being handled by injured-----	4,711	60	70	55	1,828	693	2,005	9.0
Falls of persons-----	8,897	71	137	179	4,066	1,270	3,174	16.2
Hand tools-----	5,551	6	173	18	1,528	942	2,884	4.0
Animals-----	1,468	18	20	24	670	240	496	2.9
Vehicles-----	6,687	190	108	110	3,157	935	2,187	24.2
Explosions-----	505	24	22	10	166	94	189	3.0
Electricity-----	326	39	4	6	91	38	148	3.7
Hot, poisonous and corrosive substances, and flames-----	2,745	3	24	7	941	525	1,245	1.4
Machinery—all-----	7,126	84	752	74	2,506	963	2,747	18.7
Boilers and steam pressure apparatus-----	162	4	4	1	52	33	68	.5
Prime movers-----	184	3	25	2	69	31	54	.6
Power transmission apparatus-----	907	19	86	15	329	130	328	3.2
Elevators and skips-----	260	20	13	12	117	33	65	2.4
Cranes and derricks-----	293	7	13	1	149	33	90	.9
Working machines-----	4,783	20	552	32	1,565	620	1,994	9.0
All other-----	537	11	59	11	225	83	148	2.2
Miscellaneous causes-----	4,114	31	72	50	967	557	2,437	5.8

*See footnote to Table III, page 62, for method of determination.

TABLE XII—Continued.
Part 1B. Causes of Injuries by Extent of Disability—All Industries.

Causes	Total	Deaths	Permanent disabilities	Inde-terminate disabilities	Number of injuries			*Total days lost
					15 days and over	8 to 14 days	1 to 7 days	
All causes.....	62,273	550	1,643	613	22,458	9,828	27,181	6,829,294
Handling of objects—all.....	15,785	21	241	66	5,575	2,793	7,089	645,948
Heavy objects.....	11,273	14	151	51	4,330	1,873	4,854	474,241
Objects thrown.....	82	—	2	—	26	17	37	3,689
Objects dropped.....	1,843	6	24	7	692	269	845	99,103
Objects falling from load or pile (while loading, unloading or piling).....	1,084	3	15	11	453	159	443	67,941
Caught or squeezed between object handled and other object.....	2,341	—	93	5	898	377	968	82,447
Strain in handling or lifting.....	4,634	4	8	24	1,846	813	1,939	175,812
All other.....	1,289	1	9	4	415	238	622	45,249
Sharp objects.....	3,735	7	84	12	959	797	1,876	150,152
Slivers, wood.....	1,161	—	33	5	296	234	593	43,310
Glass.....	469	—	11	—	121	118	219	10,416
Sheet metal, and sheet metal objects.....	258	1	3	1	60	56	137	13,820
Objects with protruding nails.....	136	1	1	1	29	31	73	9,413
Slivers, metal.....	406	1	6	—	107	82	210	13,585
All other sharp objects (not tools).....	1,305	4	30	5	346	276	644	59,608
Hand trucks, carts, and wheelbarrows.....	777	—	6	3	286	123	359	21,555
Struck by truck, handled by co-worker.....	51	—	1	—	22	8	20	957
Caught between truck and other object.....	124	—	4	—	41	25	54	2,326
Overturning.....	57	—	1	—	23	12	21	1,891
Objects falling from (not in loading and unloading).....	91	—	—	—	38	11	42	2,008
Struck by truck, handled by injured person.....	253	—	—	—	85	35	133	4,657
All other.....	201	—	—	3	77	32	89	9,716
Stepping on or striking against objects—all.....	4,358	3	20	14	963	778	2,580	119,758
Stepping on.....	1,641	—	3	1	186	249	1,202	19,240
Nails.....	1,574	—	3	—	171	234	1,166	16,769
Other sharp objects.....	67	—	—	—	15	15	36	2,471
Striking against.....	2,717	3	17	13	777	529	1,378	100,518
Nails.....	573	1	3	2	124	115	328	19,325
Splinters or sharp projections from walls or structures.....	24	—	2	—	7	5	10	3,597
Persons.....	57	—	1	—	10	13	33	2,107
All other objects.....	2,063	2	11	11	636	396	1,007	75,489

Falling objects—not being handled by injured—all.	4,711	60	70	55	1,828	693	2,005	615,896
Collapse of	175	4	2	4	98	18	49	39,791
Buildings and walls	22				18	1	3	1,299
Stones, sand and earth	9				6		3	754
Piles (stacked, stored or piled-up material)	91	3	2	4	43	11	28	30,131
Scaffolds or staging	18	1			11	2	4	6,605
Chutes, conveyers and slides	4				1	1	2	99
All other	31				19	3	9	903
Objects falling from elevation	3,594	10	49	29	1,352	541	1,613	216,903
Bins and pockets	4				3		1	130
Dumps—at mines and quarries	3				2		1	71
Buildings—not in course of construction or demolition	1				1			30
Buildings—in course of construction or demolition— not otherwise classified.								
Chutes, conveyors, slides and screens	18	2	2		7	2	5	12,801
Machines or work benches	81	1	1	1	30	17	31	10,634
Piles (stacked, stored or piled-up material)	98	1	7		36	11	43	16,792
Racks and shelves	93		1	2	37	18	36	4,848
Runways, balconies and platforms	4				1	1	1	1,397
Scaffolds and staging	5				4		1	244
Trestles and tramways	27			1	11	2	13	2,641
Other elevations	1				1			49
Objects falling into excavations	3,259	6	38	25	1,219	490	1,481	167,266
Into excavations (not tunnels, mines or quarries)	5				3		2	246
Into ditches or trenches	4				3		1	244
Cave-ins (not mines or quarries)	1						1	2
Of ditches and trenches	192	7	3	2	83	28	69	51,344
Of tunnels	32	2		1	16	3	10	14,229
Of other excavations	2		1		1			139
Objects falling in mines, quarries and tunnels(inside)	158	5	2	1	66	25	59	36,976
Roof in entries	386	11	8	6	124	65	172	89,484
Coal, rock or ore at working face—not roof	8				3	4	1	292
Roof in working places—not stopes	17		1		3	3	10	1,866
Coal, rock or ore from, or in underground chutes, man- ways, and batteries	8				5	2	1	255
From surface into shaft	11		1		3	2	5	471
From cage into shaft	3				1		2	48
Cave-in of mine	1						1	7
Timbers—not in handling	11	3		1	5	1	1	20,301
Ore and rock in stopes (metal mines)	14	4		1	2	3	4	26,410
All other	32	1			9	6	15	7,024
Other falling objects	281	3	1	4	93	44	132	32,810
Trees in felling—not otherwise classified. Include dead limbs and tops	359	28	8	14	168	41	100	218,128
Poles	23	1	1		10	3	8	7,549
Objects tipping over (except vehicles)—not in handling	21	6		1	6	3	3	42,469
Trees, lodged in felling (include trees and limbs struck by felled tree)	63	1	1	4	24	5	28	21,994
Trees, not in felling	66	2	1	5	35	6	17	24,107
Limbs, not in felling	9	3				2	4	18,032
Logs rolling	42	1	1	1	19	5	15	9,195
	135	14	2	3	74	17	25	94,782

*See footnote to Table III, page 62, for method of determination.

TABLE XII—Continued.
Part 1B. Causes of Injuries by Extent of Disability—All Industries.

Causes	Number of injuries						*Total days lost	
	Total	Deaths	Permanent disabilities	Indeterminate disabilities	Temporary disabilities			
					15 days and over	8 to 14 days		1 to 7 days
Falls of persons—all	8,897	71	137	179	4,066	1,270	3,174	1,103,322
Falls of persons from elevations	4,412	63	97	123	2,147	562	1,420	824,002
Gangplanks	12	—	—	—	5	3	4	252
Loading platforms	43	—	—	—	15	5	23	887
Benches, boxes, chairs and tables	115	—	—	—	54	15	39	20,819
Bridges, dams or docks (not in construction or demolition)	29	2	4	1	13	1	8	17,285
Buildings in construction or demolition	66	3	9	8	31	4	11	43,781
Cranes, derricks, elevators and hoists in erecting and rigging	27	—	1	—	11	4	11	1,662
Floors, temporary	17	—	—	—	9	4	4	461
Ladders (account breaking of ladder or parts)	76	2	—	2	39	13	19	21,469
Ladders, all other	825	7	24	22	423	97	252	128,646
Boilers, engines and machines	79	2	2	2	33	14	26	18,596
Piles	188	1	6	2	93	19	67	20,187
Trees and poles	176	4	2	5	85	24	56	44,600
Roofs	121	5	3	11	66	9	27	55,910
Runways, balconies and platforms (not loading platforms)	123	6	1	9	63	13	31	57,619
Stairs and steps	615	2	4	6	269	88	246	40,781
Trestles and tramways	30	—	1	1	19	1	8	3,035
Windows or wall openings	13	—	—	—	6	—	4	18,645
Elevated bins, pockets and tanks	8	3	—	—	4	2	2	144

Stumbling over fixed objects-----	142	---	3	---	52	21	66	7,691
Slipping-----	2,861	---	16	18	1,230	483	1,114	105,854
Stumbling over loose objects-----	905	---	2	9	373	146	374	39,496
All other-----	110	2	16	21	47	4	20	65,174
Hand tools--all-----	5,551	6	173	18	1,528	942	2,884	276,076
Glancing or slipping of tools in use-----	4,250	4	88	8	1,224	772	2,154	133,243
Breaking or coming apart of tools-----	133	1	2	3	40	20	67	15,532
Flying rivets, nails, chips and other particles set in motion by tools-----	875	1	78	5	156	87	548	114,566
All other-----	293	---	5	2	108	63	115	12,735
Animals--all-----	1,468	18	20	24	670	240	496	198,994
Horses, mules and oxen-----	1,343	17	19	23	647	218	419	188,162
Kicks-----	442	4	3	8	184	80	163	50,141
Runaways-----	146	9	6	7	63	21	40	74,336
Bites-----	5	---	---	---	3	1	1	77
All other causes-----	750	4	10	8	397	116	215	63,608
Other animals and insects--all causes-----	125	1	1	1	23	22	77	10,832
Vehicles (operation, not construction of)--all-----	6,687	190	108	110	3,157	935	2,187	1,635,875
Cars and engines--steam and electric railways-----	1,359	55	35	19	530	222	498	451,440
Train wrecks-----	201	7	1	2	87	25	79	52,554
Collisions-----	105	6	---	1	44	17	37	42,072
Derailments-----	95	1	1	1	42	8	42	10,465
Car striking object on track without derailling-----	1	---	---	---	1	---	---	17
Falls from or in cars or engines-----	820	17	18	14	320	141	310	177,681
In getting on or off, in motion-----	116	3	8	1	40	14	50	39,385
In getting on or off, at rest-----	91	---	---	---	40	14	37	1,765
While riding on, due to sudden stop or start-----	76	---	---	---	28	15	33	2,204
While riding on, due to slipping or loss of balance-----	71	6	3	2	25	15	20	47,657
While riding on, contact with overhead structure-----	7	---	---	---	6	1	---	180
While riding on, contact with side structure-----	21	1	1	---	7	4	8	7,561
Falls--not otherwise classified-----	438	7	6	11	174	78	162	78,929
Struck by or caught between cars-----	234	29	13	2	81	38	71	202,630
While coupling or uncoupling-----	55	8	6	---	22	13	6	57,570
While switching-----	11	2	---	---	3	2	4	12,127
While repairing cars or engines-----	4	---	---	---	1	1	2	39
While repairing track-----	15	3	---	---	4	4	4	18,152
While crossing track-----	10	4	1	---	2	1	2	28,529
While standing or walking on track-----	25	6	1	1	7	2	8	37,886
All other-----	114	6	5	1	42	15	45	48,327
Other causes in connection with cars and engines-----	104	2	3	1	42	18	38	18,575
Setting or releasing hand brakes (exclude falls due to)-----	40	---	1	---	17	6	16	1,700
Objects falling from (not in loading or unloading)-----	24	2	1	---	8	3	10	12,663
Objects shifting on load-----	5	---	1	1	3	---	---	3,040
All other-----	35	---	---	---	14	9	12	1,172

*See footnote to Table III, page 62, for method of determination.

TABLE XII—Continued.
Part 1B. Causes of Injuries by Extent of Disability—All Industries.

Causes	Total	Deaths	Permanent disabilities	Inde-terminate disabilities	Number of injuries			*Total days lost
					15 days and over	8 to 14 days	1 to 7 days	
Plant trucks on tracks. Mine and quarry cars and motors (animal or power drawn)-----	203	---	6	10	81	38	68	27,668
Caught between and overhead obstruction-----	3	---	---	---	1	1	1	40
Collisions-----	7	---	---	---	1	3	2	1,738
Derailments-----	26	---	---	---	7	8	10	2,049
Falls from, due to sudden start or stop-----	5	---	---	---	2	---	---	3,668
Riding on, contact with rib or side structure-----	3	---	---	---	1	---	1	2,879
Braking or spragging-----	3	---	---	---	1	---	---	99
Struck by or caught between while repairing track-----	4	---	2	1	3	---	1	3,888
Struck by or caught between—while standing or walking on track-----	29	---	1	---	16	4	8	1,156
Coal, rock, etc., falling from car—struck by (not in loading or unloading)-----	10	---	---	---	5	1	4	139
Lifting or pushing car-----	23	---	1	---	6	4	12	1,381
Getting on or off car-----	6	---	---	---	5	---	1	237
Caught by car or load in dumping-----	17	---	---	---	5	3	9	198
Coupling or switching—struck by or caught between-----	22	---	2	---	13	4	3	1,366
All other-----	45	---	---	4	16	10	15	8,830
Automobiles and other power vehicles-----	3,981	86	56	61	1,973	533	1,272	782,869
Collision due to breaking of parts-----	4	---	1	---	2	1	1	58
Overturning, due to breaking of parts-----	27	1	---	---	8	3	14	7,672
Overturning, due to skidding-----	78	5	2	---	44	8	19	36,876
Collision with cars or engines-----	131	9	2	---	52	17	49	67,113
Collisions, all other causes-----	397	19	4	11	172	51	140	148,646
Collision, due to skidding-----	12	3	1	---	3	1	4	19,154
Overturning, all other causes-----	222	13	5	7	100	37	60	101,283
Cranking-----	1,449	1	13	10	844	171	410	73,155
Falls from-----	696	6	13	13	293	96	275	84,701
Struck by or caught between-----	730	27	11	12	362	108	210	212,233
Objects falling from (not in loading or unloading)-----	75	---	---	1	31	10	33	2,766
Load shifting-----	17	---	3	1	4	4	5	4,484
Explosion of gasoline tank-----	1	1	---	---	---	---	---	6,000
All other-----	142	1	1	4	58	26	52	18,728

Bicycles-----	147	2	1	---	49	19	76	14,616
Breaking of parts-----	8	---	---	---	1	2	5	58
Collisions (all kinds)-----	82	2	1	---	28	11	40	13,592
All other-----	57	---	---	---	20	6	31	966
Animal-drawn vehicles (not mine or quarry cars)-----	720	10	6	18	386	98	202	122,511
Collision with cars or engines-----	11	3	---	---	4	1	3	18,229
Collision with other vehicles-----	14	---	1	---	5	---	8	389
Collision with stationary objects-----	1	---	---	---	1	---	---	94
Overturning-----	43	---	---	---	24	7	11	3,161
Whiffletrees-----	1	---	---	1	1	---	---	35
Falls from-----	465	5	4	8	260	63	125	65,940
Struck by or caught between-----	91	---	---	6	46	14	25	13,592
Objects falling from (not in loading or unloading)-----	18	1	---	1	7	2	7	7,771
Objects shifting on load-----	9	---	---	---	6	1	2	167
Breaking of vehicle or some part thereof-----	27	1	1	2	15	3	5	12,282
All other causes-----	40	---	---	---	17	7	16	851
Animal-drawn implements (not machinery)-----	185	1	---	1	99	21	63	12,196
Caught by or in (scrapers, plows, harrows, rollers, etc.)-----	163	1	---	1	87	20	54	11,648
All other-----	22	---	---	---	12	1	9	548
Water craft-----	86	33	3	1	37	4	8	205,723
Collision with vessels-----	5	4	---	---	---	1	---	24,012
Capsizing-----	7	6	---	---	1	---	---	36,020
Falls from or jumping overboard-----	27	9	1	---	11	1	5	56,718
Falls into hatchway-----	19	3	2	1	10	1	2	21,806
Shipwrecks not otherwise classified-----	9	9	---	---	---	---	---	54,000
All other-----	18	2	---	---	14	1	1	13,100
All other vehicles-----	6	3	1	---	2	---	---	18,852
Aeroplanes—not otherwise classified-----	5	3	1	---	1	---	---	18,796
All other-----	1	---	---	---	1	---	---	56
Explosions, electricity, fires and hot substances—all-----	2,708	64	33	---	952	501	1,137	516,036
Explosions of explosive substances-----	505	24	22	10	166	94	189	207,798
Explosives, explosion of, in manufacturing and storing-----	1	---	---	---	---	---	---	4
Explosives, explosion of, in transporting and handling-----	5	1	2	---	1	1	---	12,494
Blasting—premature shot-----	15	3	4	---	5	---	3	30,534
Blasting—misfires or delayed shot-----	10	1	1	1	3	4	1	8,462
Blasting—all other-----	37	6	1	1	12	5	12	41,706
Dust—explosion of-----	3	---	---	---	---	1	2	14
Gas—explosion of-----	189	5	6	3	59	36	80	43,936
Gasoline and other petroleum products, explosion of-----	124	6	1	5	47	25	40	48,981
Ammonia apparatus, explosion of (tanks, compressors, condensers, piping and valves)-----	5	---	---	---	---	3	2	45
Other high pressure apparatus explosion of (include bursting under pressure)-----	35	---	5	---	10	5	15	3,435
Blasting—struck by flying objects (not above specified)-----	4	1	1	---	---	1	1	7,353
All other explosions-----	77	1	1	1	29	13	32	10,834

*See footnote to Table III, page 62, for method of determination.

TABLE XII—Continued.
Part 1B. Causes of Injuries by Extent of Disability—All Industries.

Causes	Number of injuries						*Total days lost	
	Total	Deaths	Permanent disabilities	Indeterminate disabilities	Temporary disabilities			
					15 days and over	8 to 14 days		1 to 7 days
Electricity—								
All causes—	326	39	4	6	91	38	148	254,924
Conflagrations—								
All causes—	33			1	13	6	13	2,289
Hot substances and flames—	1,844	1	7	4	682	363	787	51,025
Hot water—	281			1	116	58	106	6,326
Asphalt, pitch and tar—	199				99	37	63	3,667
Other hot liquids—	268				96	60	112	4,170
Molten metal, explosion of—	32				9	7	15	1,499
Molten metal or slag (all other causes)—	127				52	19	55	4,192
Flames and flare-backs—all other—	340				137	75	128	5,742
Flames and flare-backs—ignition of clothing—	23	1		1	12	5	3	11,030
Molten metal at furnace or cupola—	6				3		3	94
Molten metal, pouring—	106				55	10	41	2,211
Radiant heat from incandescent metal—	3					2	1	28
Metal, hot but not molten—handling of—	14				3	6	5	481
Oxy-acetylene or electric cutting and welding—	99		1		15	13	70	1,186
Hot surfaces and all other hot objects—contact with—	346		3	2	85	71	185	10,399
Poisonous and corrosive substances—	868	2	17	2	246	156	445	43,677
Corrosive substances—	452		16		108	79	249	18,699
Caustic stuffs, alkalies, acids, quicklime—	438		16		103	74	245	18,496
All other—	14				5	5	4	203
Poisonous substances—								
All other—	355		1	2	128	69	155	12,495
Poisonous gases—								
All other—	61	2			10	8	41	12,483
Machinery—all	7,126	84	752	74	2,506	963	2,747	1,280,239
Boilers and steam pressure apparatus—	162	4	4	1	52	33	68	33,976
Steam boilers—explosion of—	10	4	1		3		2	25,876
Steam boilers—all other causes—	7				5	1	1	310
Steam pipes—explosion of—	7				1	2	4	55
Steam pipes—all other causes—	12				5	6	1	198
Steam and hot water gauges—explosion of—	4		1				3	998
Steam boilers—escaping steam and hot water—	60						24	1,168
Other steam pressure apparatus—explosion of—	21		1	1	6	5	8	3,884
Other steam pressure apparatus—all other causes—	41		1		8	7	25	1,487

TABLE XIX.

Injured Persons by Five Year Age Groups and Extent of Disability—All Industries.

Age group in years	Number of injured persons				
	Total	Deaths	Permanent disabilities	Inde-terminate disabilities	Temporary disabilities
All ages*-----	59,730	513	1,635	582	57,000
Average age (years)-----	34	38	37	40	34
14 to 19-----	4,184	14	89	18	4,063
20 to 24-----	10,353	57	218	40	10,038
25 to 29-----	9,535	62	216	52	9,205
30 to 34-----	8,525	75	218	65	8,167
35 to 39-----	8,218	76	228	98	7,816
40 to 44-----	6,399	50	189	80	6,080
45 to 49-----	4,809	57	166	68	4,518
50 to 54-----	3,452	44	124	56	3,228
55 to 59-----	1,987	28	88	32	1,839
60 to 64-----	1,235	16	57	46	1,116
65 and over-----	1,033	34	42	27	930

*This includes tabulatable injuries only; 2,543 cases omitted for which age was not reported.

TABLE XX.
Injured Persons by Five Year Age Groups and Main Industrial Divisions.

Age groups	Number of injured persons														
	Total cases	Agriculture	Mining and quarrying	Oil production	Lumber and woodworking	Metal and machinery manufacturing	Other manufacturing	Construction—engineering, building and boat building	Vessel operation and stevedoring	Railroad operation	Public utilities	Cartage and storage	Commercial enterprises and clerical	Care and custody	Miscellaneous
All ages*	59,730	4,202	1,737	3,058	3,893	4,394	8,409	10,069	1,190	5,210	2,852	3,576	7,899	2,260	981
Average age (years)	34	35	33	32	34	33	33	36	36	35	35	31	32	36	36
14 to 19 years	4,184	336	30	98	352	414	918	420	8	144	74	297	904	143	46
